

# SOLUTIONS IN ACTION

PACK EXPO 2008

*WCRT- 200 Automatic Rotary Arm  
Stretch Wrapper from Wulftec/M.J.Maillis*

*Allen-Bradley® SLC™ 500  
Programmable Logic Controller*

*Allen-Bradley® PowerFlex® 4  
Variable Frequency Drive*

## Booth No. N-3223

**Wulftec/M.J. Maillis** builds efficient, durable, **all-steel stretch wrapping and palletizing equipment** backed by long warranty periods. End users from a wide variety of industries can incorporate stretch wrappers from Wulftec into their manufacturing operation by connecting them to a palletizer or configuring the machine as a standalone conveyor-based system.

"Customers can rest assured when using the Wulftec stretch wrapper," says Steve Fleming, director of sales and national accounts, Wulftec. "That's because we use durable, high-quality Rockwell Automation products as the foundation for our machines."

The Allen-Bradley® SLC 500™ programmable controller from Rockwell Automation is the standard for Wulftec machines, although the company uses Allen-Bradley CompactLogix™ ControlLogix® and MicroLogix™ 1500 programmable controllers upon customer request. The scalable controller family allows Wulftec to choose the controller that best matches the needs of the application, whether it requires simple motion, integrated drive control or advanced information gathering capabilities.

The operator-friendly Allen-Bradley PanelView™ Plus 600 HMI provides a window to critical data and production information, helping customers to improve decision-making and troubleshooting capabilities. To control the conveyor speed and arm rotation, Wulftec uses Allen-Bradley PowerFlex® drives that help to deliver safer, more reliable performance and minimal maintenance.

"Our in-depth experience with Rockwell Automation control systems and components has made us a valuable resource to the many customers who have standardized on Rockwell Automation products throughout their plant," said Fleming.

Customers of Wulftec can benefit from cost-savings since they can turn to their local distributor for parts and support, as opposed to purchasing a machine that combines components from multiple suppliers.

# Solutions in action at Pack Expo 2008

**WCRT 200**-This automatic rotary arm stretch wrapper covers the load from top to bottom, automatically cutting and sealing the film using a compact heat seal film clamp. The WCRT 200 reaches rates of 100 loads per hour and accommodates 5,000 pound load sizes.

Designed to maximize throughput and efficiency, the automatic stretch wrapping process helps minimize operator involvement and provide a tight wrap with no film tail for worry-free transport. Additionally, the machine pre-stretches the film to optimize use and reduce costs.

The versatile WCRT 200 rotary arm moves at 17 RPM and can wrap a variety of items including extremely light, heavy, tall or unstable loads. Easy access to all of the machine's components allows for easier maintenance.

Additionally, at PACK EXPO 2008, Wulftec will be unveiling a new automatic rotary arm and turntable combo stretch wrapper. Wulftec will also be featuring two semi-automatic stretch wrappers and an automatic pallet strapping machine.
