

>> Weight Controller With Network Interface

Only three inches deep, the HI 4050 general-purpose weight controller from Rockwell Automation Encompass™ Product Partner Hardy Instruments is now available with a ControlNet network interface. ControlNet allows fast transfer of time-critical application information at 5 Mbit/sec in a redundant, deterministic and predictable manner. Information can be transmitted to up to 98 additional nodes at distances of 250 meters to 5,000 meters. The interface comes with two BNC converters for cable redundancy.

The controller includes WAVERSAVER® to eliminate the effects of surrounding vibration for fast, stable weight display, C2® electronic calibration without test weights, a Secure Digital (SD) based Secure Memory Module card for fast transfer of configuration data, and INTEGRATED TECHNICIAN (IT®) for system diagnostics and troubleshooting.

It comes standard with Ethernet, and optional DeviceNet, ControlNet, EtherNet/IP, Allen-Bradley® Remote I/O, or Analog and other networks.
