POINTBlock dc 8 Input/8 Output Module

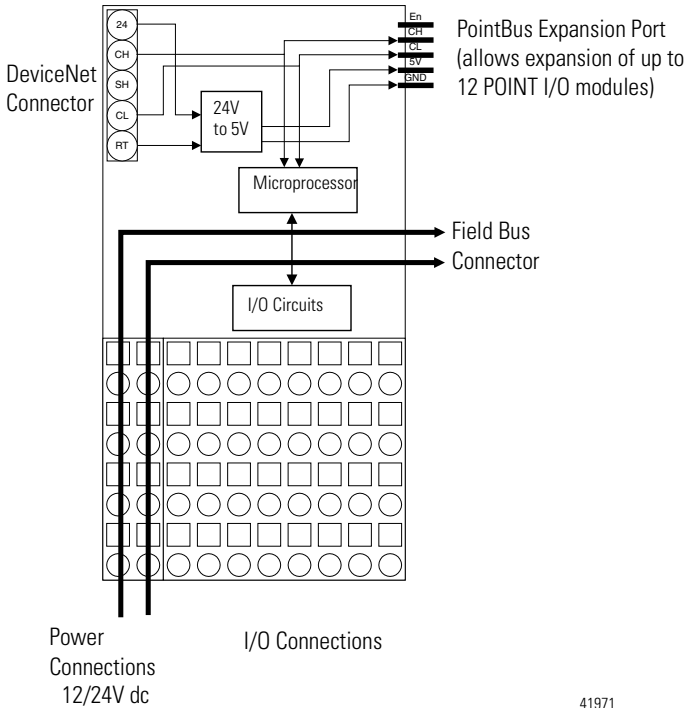

(Cat. No. 1734D-IB8XOB8E and -IB8XOB8ES)

This 1734D input/output module is a DIN-rail mounted device with an integrated DeviceNet communication interface, 8 inputs and 8 outputs, removable terminations, and a PointBus expansion port. The expansion port allows you to add up to a maximum of 12 additional POINT I/O modules.

The module includes a non-isolated DeviceNet communication interface. The 24V dc from the DeviceNet connection powers a non-isolated dc/dc converter that generates +5V dc which powers the POINTBlock electronics and connects to the PointBus port to power the expansion I/O electronics.

The 1734D-IB8XOB8E uses cage-clamp terminations, and the 1734D-IB8XOB8ES uses spring-clamp terminations.

ATTENTION

Whatever field power you supply is connected to the internal field-power bus. **For example, if 120V ac is applied to the power connections, there will be 120V ac applied to the modules through the internal field-power bus.**

POINT I/O modules to the right of the module will also have that internal power bus voltage applied, unless you use a 1734-FPD to interrupt and change the field power-bus voltage.

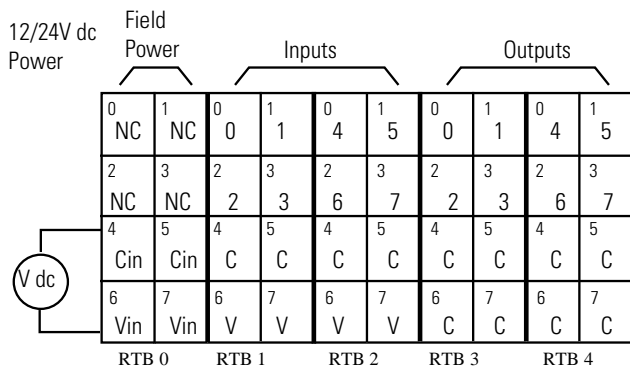

10's Node Address Rotary Switch

42004

To set the node address, set the combination of 1's and 10's to correspond to the required address. (For example, for 61, set the 10's switch to 6 and the 1's switch to 1.)

Wiring the 8 Input/8 Output Module

This supply will be connected to the internal power bus.

Remote Termination Block 2			
4	0	4	6
5	1	5	7
6	2	4	6
7	3	5	7

Connect common on 3-wire proximity switches.
12/24V dc is supplied through the internal power bus.

Note: When connecting more than 1 wire in a termination point, make sure that both wires are the same gauge and type.

	Output Terminal	Common Terminal	Power
Remote Termination Block 3			
Channel 0	0	4	
Channel 1	1	5	
Channel 2	2	6	
Channel 3	3	7	
Remote Termination Block 4			
Channel 4	0	4	
Channel 5	1	5	
Channel 6	2	6	
Channel 7	3	7	

Module power is supplied from the internal power bus.

Note: When connecting more than 1 wire in a termination point, make sure that both wires are the same gauge and type.

Outputs are electronically protected to 0.75A. Module outputs are selectable for latched mode or auto-reset mode. (Latched/auto reset is set by module, not by individual channel.) Each channel is assigned a bit in the data table to indicate the faulted condition. Outputs in the latched mode can only be reset with a user command to the module.

Latch Mode Functionality

State	Indication	Error Bit
Off	Dark	0
On	Yellow	0
Faulted/On	Red	1
Faulted/Off	Flashing Red	1

To reset an output, the reset bit for the output can be set, or the output bit must be cycled off/on.

Auto Retry Mode Functionality

State	Indication	Error Bit
Off	Dark	0
On	Yellow	0
Faulted/On	Red	1
Faulted/Off	Flashing Red	1

In auto retry, the output will recover once the fault is removed.
