

RAAMP™

MRO Process Management to Improve Your Bottom Line

RAAMP Deliverables for Your Facility

Personal Asset Management Professional

An on-site resource who works with your team and is focused solely on managing your MRO repair process.

Warranty Tracking

Your RAAMP specialist will track all repairable products to make sure that you are not paying for repairs or failed components currently under warranty.

Asset Tracking

All repairable assets are tracked using bar code technology.

63% of spare parts are classified as excess, inactive or obsolete (ARC)

Excess spares, unmanaged storerooms, and inefficient processes make it challenging when establishing a stable production environment and a predictable maintenance budget. To help you improve your overall effectiveness, Rockwell Automation offers a unique service – RAAMP. This service provides a proven methodology to repair your assets through optimizing your inventory and simplifying your transactions through a single point of contact for all repairs.

By implementing a RAAMP program, you will have special access to a one year in-service warranty and consolidated asset reports, which include: warranty and asset tracking, repair spend and ROI. Combined, these benefits help lengthen your product lifecycle and increase your Return On Net Assets (RONA) and Overall Equipment Efficiency (OEE).

RAAMP Benefits:

- Reduced maintenance repair and operations MRO repair costs
- 1 year in-service warranty
- Manage and optimize spares
- Obsolescence management
- Identify opportunities for standardization
- Flag common mode failures
- Improve maintenance decisions with accurate data
