

SELF-PACED LESSONS

RSTrainer Introduction

- Course Introduction

Using RSLogix 500 Backup Utilities

- Using RSLogix 500 Backup Utilities

Documenting and RSLogix 500 Project

- Adding Symbols and Address Descriptions
- Adding Instruction Comments, Rung Comments, and Page Titles
- Interactive Practice

Working with Databases

- Using Database Tools
- Importing and Exporting the Database
- Interactive Practice

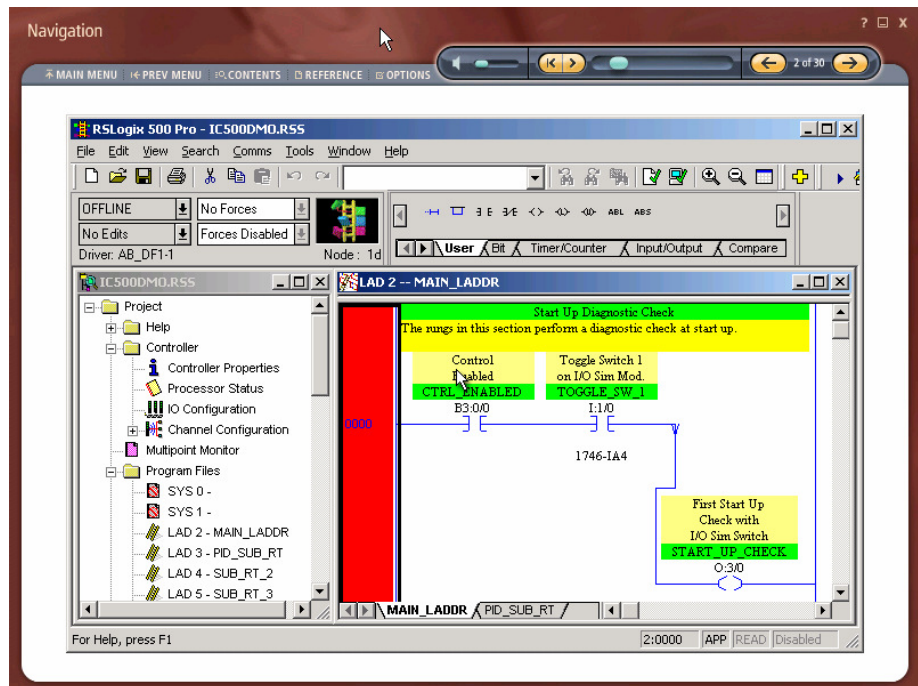

Reporting

- Reporting

Searching

- Searching an RSLogix 500 Project

RSTrainer® for RSLogix 500 Software – Documenting and Searching e-Learning Courses

Course Purpose

Documenting a project and searching the documentation are valuable troubleshooting tools, and this interactive, self-based training course teaches you the core tasks required to document and search an RSLogix 500 project. You will learn to enter a variety of project documentation, such as rung comments and page titles, that you can use to improve your own RSLogix 500 projects. You will also learn how to import and export RSLogix 500 databases and how to backup your RSLogix 500 projects.

Helpful animations, background information, and links to other reference materials provide you with a variety of knowledge and learning tools. These tools, combined with step-by-step demonstrations and interactivity, will provide you with the knowledge and skills required to perform each task. You will also have the opportunity to practice performing software tasks through interactive simulations. These simulations will guide you through the required steps and give you immediate feedback on your performance to reinforce learning.

You will also be given multiple opportunities to test your knowledge through question and answer sessions. These question and answer sessions will allow you to gauge your knowledge level and help you identify areas for improvement.

Intended Audience

These e-learning courses are intended for the following audiences:

- Individuals who prefer self-paced instruction
- Individuals who cannot attend classroom training
- Users of Rockwell Automation RSLogix 500 Software who need refresher training
- Individuals who need to configure and navigate through RSLogix 500 software
- Individuals interested in the features and capabilities of RSLogix 500 software

Prerequisites

To successfully complete this course, you should be able to perform basic Microsoft® Windows® tasks. Prerequisite knowledge of common processor and ladder logic terms and operation is suggested.

Web-Based or Computer-Based Training

Choose the training delivery method that best suits your needs:

- RA University Online web-based training is stored on a server and accessed across a network via the Internet. Web-based training permits unlimited usage for a single, licensed user.
- The RSTrainer computer-based CD-ROM format permits unlimited usage on a single, licensed computer. Computer-based training does not require an Internet connection; therefore, learning can take place anytime and anywhere a computer is available.

Learning Activities & Features

Rockwell Automation e-learning courses include the following features:

- Information overviews
- Discussions of basic principles and/or concepts
- Descriptive and detailed technical explanations
- Animated sequences
- Interactive and integrated practice exercises
- Interactive simulations
- Online help
- Index to locate specific course topics
- Embedded Adobe® Acrobat® PDF files of User Manuals and Installation Guides
- Links to useful reference material
- Glossary of terms

In addition, the RA University Online web-based training courses offer the following unique features:

- Pre- and post-testing
- Embedded learning management system
- Administrative features

To Purchase

To register for this or any other Rockwell Automation training course, contact your local authorized Allen-Bradley Distributor or your local Sales/Support office.

You can also access course information via the Web at <http://www.rockwellautomation.com/training>
