ControlLogix/Studio 5000
Kinetix 6000 Troubleshooting and Project Interpretation
Course Description

Course Agenda
Day 1
- Locating Kinetix 6000 Components
- Checking Kinetix 6000 Connections
- Interpreting Kinetix 6000 Indicators
- Analyzing Fault Codes in a Kinetix 6000 System
- Interpreting Motion State Instructions in a Studio 5000 Logix Designer Project

Day 2
- Interpreting Motion Move Instructions in a Studio 5000 Logix Designer Project
- Integrated Practice: Troubleshooting a Kinetix 6000 System
- Testing SERCOS Hardware
- Tuning SERCOS Axes
- Replacing a Kinetix 6000 Drive

Course Number
CCN200

Course Purpose
Upon completion of this course, you will be able to apply maintenance and troubleshooting techniques to diagnose and correct common problems that may occur with a Kinetix® 6000 system.

During class, you will practice operating and troubleshooting the system through hands-on exercises using workstations and the Studio 5000 Logix Designer® application.

Building upon the skills developed in the Fundamentals of Motion Control (CCN130) course, you will develop skills to help maintain and troubleshoot a multi-axis motion control system. You will practice identifying faults related to hardware and software by employing methods such as viewing fault code tables, interpreting system LEDs, and working with other status indicators.
Who Should Attend
Individuals who need to maintain and troubleshoot Kinetix 6000 motion control systems should attend this course.

Prerequisites
To successfully complete this course, the following prerequisites are required:

• Completion of the Motion Control Fundamentals course (Course No. CCN130) or equivalent knowledge of or experience with drives, feedback devices, and velocity and position loop systems.

• Completion of the Studio 5000 Logix Designer Level 1: ControlLogix System Fundamentals course (Course No. CCP146) or equivalent knowledge of or experience with the ControlLogix® platform and basic ladder logic.

Technology Requirements
All technology is provided for student use in the classroom by Rockwell Automation. It is not necessary for students to bring any technology with them when attending this course.

Student Materials
To enhance and facilitate the students’ learning experiences, the following materials are provided as part of the course package:

• Student Manual:
  - Includes the key concepts, definitions, examples, and activities presented in this course

• Lab Book:
  - Provides learning activities and hands-on practice. Solutions are included after each exercise for immediate feedback.

• Kinetix 6000 Multi-Axis Servo Drives User Manual:
  - Provides detailed instructions for mounting, wiring, and troubleshooting your Kinetix 6000 drives.

• Studio 5000 Logix Designer and Logix5000 Motion Control Procedures Guide:
  - Provides the procedures for performing motion control tasks in a Logix5000™ system using Logix Designer and RSLinx® Classic software.

Hands-On Practice
Hands-on practice is an integral part of learning and this course offers extensive hands-on opportunities. Throughout the exercises, you will use a workstation containing real and simulated devices to practice the tasks and concepts involved in maintaining and troubleshooting a Kinetix 6000 system.

After learning maintenance and troubleshooting techniques, you will learn how to interpret Logix Designer projects for motion applications, understand fault routines, and test and tune a new system.

Next Learning Level
Once you have an understanding of the topics and skills covered in this course, you may want to attend specific training such as:

• For motion programming: Studio 5000 Logix Designer Level 4: Kinetix 6000 (SERCOS) Programming (Course No. CCN145).

• For troubleshooting a ControlLogix system: Studio 5000 Logix Designer Level 2: ControlLogix Maintenance and Troubleshooting (Course No. CCP153)

Course Length
This is a two-day course.
