RSTrainer® for EtherNet/IP – Communications and Diagnostics e-Learning Courses

Course Purpose

This interactive, self-paced training course explains the concepts of Ethernet Industrial Protocol (EtherNet/IP) communications and diagnostics. During the course, you will learn how to establish EtherNet/IP connections, send messages, and perform basic networking diagnostics.

Helpful animations, background information, answers to frequently asked questions, and links to other reference materials provide you with a variety of knowledge and learning tools. These tools will provide you with the knowledge required to establish EtherNet/IP connections to remote devices, send messages over an EtherNet/IP network via produced and consumed tags and a message instruction, and configure the 9300-8EDM Ethernet diagnostic module.

You will also be given multiple opportunities to test your knowledge through question and answer sessions. These question and answer sessions will allow you to gauge your knowledge level and help you identify areas for improvement.
Intended Audience
These e-learning courses are intended for the following audiences:

• Individuals who prefer self-paced instruction
• Individuals who cannot attend classroom training
• Individuals who are responsible for setting up communications over an EtherNet/IP network
• Individuals interested in understanding how to send messages over an EtherNet/IP network, and perform basic networking diagnostics

Prerequisites
To successfully complete this course, you should be able to perform basic Microsoft® Windows® tasks.

Web-Based or Computer-Based Training
Choose the training delivery method that best suits your needs:

• RA University Online web-based training is stored on a server and accessed across a network via the Internet. Web-based training permits unlimited usage for a single, licensed user.
• The RSTrainer computer-based CD-ROM format permits unlimited usage on a single, licensed computer. Computer-based training does not require an Internet connection; therefore, learning can take place anytime and anywhere a computer is available.

Learning Activities & Features
Rockwell Automation e-learning courses include the following features:

• Pre- and post-testing (when used in conjunction with RSTrainer Enterprise Edition Student Manager)
• Information overviews
• Discussions of basic principles and/or concepts
• Descriptive and detailed technical explanations
• Animated sequences and interactive simulations
• Interactive and integrated practice exercises
• Online help
• Index to locate specific course topics
• Embedded Adobe® Acrobat® PDF files of User Manuals and Installation Guides
• Links to useful reference material
• Glossary of terms

In addition, the RA University Online web-based training courses offer the following unique features:

• Embedded learning management system
• Administrative features

To Purchase
To register for this or any other Rockwell Automation training course, contact your local authorized Allen-Bradley Distributor or your local Sales/Support office.

You can also access course information via the Web at http://www.rockwellautomation.com/training

Catalog Numbers

• RSTrainer for EtherNet/IP – Communications and Diagnostics: 9393-RSTENET2ENE
• RSTrainer Enterprise Edition for EtherNet/IP – Communications and Diagnostics: 9393-RSTENET2ENF
• Web-based EtherNet/IP – Communications and Diagnostics ePass: WBT1PACK (equivalent to 1 course)
