

Workstation Builder

Easily select a training workstation to fit your requirements

Features and Capabilities of Workstation Builder:

- Graphical, step-by-step, component selection process
- Icon-driven navigation throughout the tool for ease-of-use
- Viewable progress summary of your selections
- Live Chat, phone, and "contact us" links to quickly answer questions
- Online help providing explanations on components
- Link to technical product documentation in the Rockwell Automation Literature Library
- Links to special promotions, standard workstation offerings, and other training products and services
- Workstation recommendations and add-ons based on your selection
- Printable summary of the requested workstation

The Rockwell Automation Workstation Builder is an online training workstation quotation request tool. The Workstation Builder allows you to choose a workstation and select your own components, simulation, and accessories. Your workstation specifications are submitted to Rockwell Automation for a quote and for expediting a timely response.

Select your ideal training workstation in 4 easy steps:

1. **Choose a platform**
2. **Select components**
3. **Select simulators and/or accessories**
4. **Print and electronically submit a request for quote**

Workstation Builder logically leads you step-by-step through several categories of components available for selection. However, default selections are provided to identify Rockwell Automation standard recommendations. Our graphical interface helps you easily identify workstation components.

Workstation Builder is located on the Training Services home page: www.rockwellautomation.com/services/training
