

PRODUCT PROFILE

POWERFLEX 7000

FIELD MODIFICATION: INTEGRAL UPS UPGRADE

As your application needs change, we can help you upgrade the reliability and increase the performance of your current medium voltage equipment - while saving you money. Upgrade your existing MV equipment as a cost-effective alternative to new equipment with our Field Modification Program.

Power loss doesn't have to put your production on hold.

Increase productivity and reduce downtime by riding through power loss with the PowerFlex 7000 integral UPS (Uninterrupted Power Supply) upgrade.

ADVANTAGES

- Allows the application to automatically re-start after a power loss occurs
- No extra space is required - it fits into the existing PowerFlex 7000 cabinets
- Its fast and easy to install - very little wiring and hardly any VFD programming
- A compact, low weight swing-out design, maintains easy access to all VFD components.

A Rockwell Automation UPS installed on a medium voltage drive in the incoming cabling section, below the LV control section keeps drive running in the event of power loss.

APPLICATIONS

A UPS addition can be used in any application that currently uses a PowerFlex 7000 medium voltage variable speed drive, and especially advantageous for remote sites or areas susceptible to power failures.

Uninterrupted power supply can benefit petrochemical, cement, forestry, mining, water/wastewater, power and manufacturing industries.
