

## *Release Notes*

# **ArmorPoint I/O EtherNet/IP Adapter**

Catalog Number 1738-AENT

Use these notes with your EtherNet/IP adapter module installation instructions, publication 1738-IN017, and wiring diagrams, publication 1738-WD004.

### **Version 1.033**

We corrected the following anomalies in firmware version 1.033.

#### **Corrected Anomalies**

- If you remove a series of I/O modules under power and one of the removed modules is replaced, the adapter may make an I/O connection to the replaced module, even though the adapter should not let this connection take place. For example, if you have established I/O connections to I/O modules in slots 3, 4, and 5, then remove these modules and re-insert only the module from slot 3, the adapter may make an I/O connection to slot 3. The adapter should not let this connection take place until you replace the modules for slots 4 and 5 as well.
- If you inhibit and then un-inhibit an I/O module that is participating in the rack-optimized connection to the adapter, an error is returned indicating the module is in use. If the I/O module is an output module, the outputs hold their last state when the module is inhibited until the adapter has been reset.

## Compatibility

If you use the adapter with a 1756-ENBT module or 1788-ENBT module, use the following firmware versions for these bridge modules:

- 1756-ENBT firmware version 2.3 or greater
- 1788-ENBT firmware version 1.33 or greater

If you use the BootP Utility to assign IP addresses to the adapter, use version 2.3.2 or greater.
