Important User Information

Solid-state equipment has operational characteristics differing from those of electromechanical equipment. Safety Guidelines for the Application, Installation and Maintenance of Solid-state Controls (Publication SGI-1.1 available from your local Rockwell Automation sales office or online at http://www.rockwellautomation.com/literature/) describes some important differences between solid-state equipment and hard-wired electromechanical devices. Because of this difference, and also because of the wide variety of uses for solid-state equipment, all persons responsible for applying this equipment must satisfy themselves that each intended application of this equipment is acceptable.

In no event will Rockwell Automation, Inc. be responsible or liable for indirect or consequential damages resulting from the use or application of this equipment.

The examples and diagrams in this manual are included solely for illustrative purposes, because of the many variables and requirements that are associated with any particular installation. Rockwell Automation, Inc. cannot assume responsibility or liability for actual use based on the examples and diagrams.

No patent liability is assumed by Rockwell Automation, Inc. with respect to use of information, circuits, equipment, or software described in this manual.

Reproduction of the contents of this manual, in whole or in part, without written permission of Rockwell Automation, Inc., is prohibited.

Throughout this manual, when necessary, we use notes to make you aware of safety considerations.

**WARNING:** Identifies information about practices or circumstances that can cause an explosion in a hazardous environment, which may lead to personal injury or death, property damage, or economic loss.

**ATTENTION:** Identifies information about practices or circumstances that can lead to personal injury or death, property damage, or economic loss. Attentions help you identify a hazard, avoid a hazard and recognize the consequences.

**SHOCK HAZARD:** Labels may be on or inside the equipment (for example, drive or motor) to alert people that dangerous voltage may be present.

**BURN HAZARD:** Labels may be on or inside the equipment (for example, drive or motor) to alert people that surfaces may reach dangerous temperatures.

**IMPORTANT:** Identifies information that is critical for successful application and understanding of the product.
ATTENTION: This equipment is intended for use in a Pollution Degree 2 industrial environment, in overvoltage Category II applications (as defined in EN/IEC 60664-1), at altitudes up to 2000 m (6562 ft) without derating. This equipment is not intended for use in residential environments and may not provide adequate protection to radio communication services in such environments.

This equipment is supplied as open-type equipment for indoor use. It must be mounted within an enclosure that is suitably designed for those specific environmental conditions that will be present and appropriately designed to prevent personal injury resulting from accessibility to live parts. The enclosure must have suitable flame-retardant properties to prevent or minimize the spread of flame, complying with a flame spread rating of V0A or be approved for the application of xenon arc. The interior of the enclosure must be accessible only by the use of a tool. Subsequent sections of this publication may contain more information regarding specific enclosure type ratings that are required to comply with certain product safety certifications.

In addition to this publication, see the following:

- Industrial Automation Wiring and Grounding Guidelines, publication 1770-4.1, for additional installation requirements.
- NEMA Standard 250 and EN/IEC 60529, as applicable, for explanations of the degrees of protection provided by enclosures.

ATTENTION: Read this document and the documents listed in the Additional Resources section about installation, configuration, and operation of this equipment before you install, configure, operate, or maintain this product. Users are required to familiarize themselves with installation and wiring instructions in addition to requirements of all applicable codes, laws, and standards. Installation, adjustments, putting into service, use, assembly, disassembly, and maintenance are required to be carried out by suitably trained personnel in accordance with applicable code of practice. In case of malfunction or damage, no attempts at repair should be made. The module should be returned to the manufacturer for repair. Do not dismantle the module.
The 1794-ADN and 1794-ADNK, Series C modules are Hazardous Location approved:

The Following Information Applies When Operating This Equipment in Hazardous Locations.

Products marked “CL I, DIV 2, GP A, B, C, D” are suitable for use in Class I Division 2 Groups A, B, C, D, Hazardous Locations and nonhazardous locations only. Each product is supplied with markings on the rating nameplate indicating the hazardous location temperature code. When combining products within a system, the most adverse temperature code (lowest “T” number) may be used to determine the overall temperature code of the system. Combinations of equipment in your system are subject to investigation by the Local Authority Having Jurisdiction at the time of installation.

WARNING:
Explosion Hazard –
• Do not disconnect equipment unless power has been removed or the area is known to be nonhazardous.
• Do not disconnect connections to this equipment unless power has been removed or the area is known to be nonhazardous.
• Secure any external connections that mate to this equipment by using screws, sliding latches, threaded connectors, or other means provided with this product.
• Substitution of components may impair suitability for Class I, Division 2.

ATTENTION:
• Use only a soft dry anti-static cloth to wipe down equipment. Do not use any cleaning agents.

At the end of its life, this equipment should be collected separately from any unsorted municipal waste.
European Hazardous Location Approval

The following applies to products marked

- Are intended for use in potentially explosive atmospheres as defined by European Union Directive 2014/34/EU and has been found to comply with the Essential Health and Safety Requirements relating to the design and construction of Category 3 equipment intended for use in Zone 2 potentially explosive atmospheres, given in Annex III to this Directive.
- Compliance with the Essential Health and Safety Requirements has been assured by compliance with EN 60079-15 and EN 60079-0.
- The type of protection is Ex ia IIC T4 Gc according to EN 60079-15.
- Are intended for use in areas in which explosive atmospheres caused by gases, vapors, mists, or air are unlikely to occur, or are likely to occur only infrequently and for short periods. Such locations correspond to Zone 2 classification according to ATEX directive 2014/34/EU.
- May have catalog numbers followed by a “K” to indicate a conformal coating option.

Electrical Safety Considerations

ATTENTION: Power to this equipment and all connected I/O must be supplied from a source compliant with the following:
- SELV source approved to EN/IEC60950-1, EN/IEC61010-2-031 or EN/IEC62368-1 (ES1)
- PELV source approved to EN/IEC60950-1, EN/IEC61010-2-031 or EN/IEC62368-1 (ES1)

Note: A power source approved to a U.S.A. or Canadian version of the above listed standards is required for system approval in the U.S.A. or Canada.

ATTENTION: All wiring must comply with applicable electrical installation requirements (e.g., N.E.C. article 501-4(b)).

ATTENTION: Wire conductor and insulation ratings shall support minimum temperature rating of 85°C (185°F).
WARNING:

- This equipment is not resistant to sunlight or other sources of UV radiation.
- This equipment shall be mounted in an ATEX Zone 2 certified enclosure with a minimum ingress protection rating of at least IP54 (in accordance with EN 60079-15) and used in an environment of no more than Pollution Degree 2 (as defined in EN 60664-1) when applied in Zone 2 environments. The enclosure must be accessible only by the use of a tool.
- This equipment shall be used within its specified ratings defined by Rockwell Automation.
- Provisions shall be made to prevent the rated voltage from being exceeded by transient disturbances of more than 140% of the peak rated voltage when applied in Zone 2 environments.
- The instructions in the user manual shall be observed.
- This equipment must be used only with ATEX certified Rockwell Automation backplanes.
- Secure any external connections that mate to this equipment by using screws, sliding latches, threaded connectors, or other means provided with this product.
- Do not disconnect equipment unless power has been removed or the area is known to be nonhazardous.
- Enclosure must be marked with the following: “Warning - Do not open when energized.” After installation of equipment into the enclosure, access to termination compartments shall be dimensioned so that conductors can be readily connected.
- Earthing is accomplished through mounting of modules on rail.
- Devices shall be used in an environment of no more than Pollution Degree 2.
ATTENTION: This equipment is sensitive to electrostatic discharge, which can cause internal damage and affect normal operation. Follow these guidelines when you handle this equipment:

- Touch a grounded object to discharge potential static.
- Wear an approved grounding wriststrap.
- Do not touch connectors or pins on component boards.
- Do not touch circuit components inside the equipment.
- Use a static-safe workstation, if available.
- Store the equipment in appropriate static-safe packaging when not in use.

ATTENTION:

- This product is grounded through the DIN rail to chassis ground. Use zinc-plated chromate-passivated steel DIN rail to assure proper grounding. The use of other DIN rail materials (for example, aluminum or plastic) that can corrode, oxidize, or are poor conductors, can result in improper or intermittent grounding. Secure DIN rail to mounting surface approximately every 200 mm (7.8 in.) and use end-anchors appropriately. Be sure to ground the DIN rail properly. Refer to Industrial Automation Wiring and Grounding Guidelines, publication 1770-4, for more information.

- Do not remove or replace a terminal base unit while power is applied. Interruption of the backplane can result in unintentional operation or machine motion.
- Do not remove or replace an Adapter Module while power is applied. Interruption of the backplane can result in unintentional operation or machine motion.
- If this equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.
- To reduce susceptibility to noise, power analog modules and digital modules from separate power supplies.

Special Conditions for Safe Use
Overview

DeviceNet Adapter, Cat. No. 1794-ADN/C, and 1794-ADNK/C

WARNING:

- If you inspect or remove the module while backplane power is on, an electric arc can occur. This could result in an explosion in hazardous location installations. Be sure that power is removed or the area is nonhazardous before proceeding.
- If you connect or disconnect the communications cable with power applied to this module or any device on the network, an electric arc can occur. This could result in an explosion in hazardous location installations. Be sure that power is removed or the area is nonhazardous before proceeding.
- If you connect or disconnect wiring while the field side power is on, an electric arc can occur. This could result in an explosion in hazardous location installations. Be sure that power is removed or the area is nonhazardous before proceeding.
- When used in a Class I, Division 2, hazardous location, this equipment must be mounted in a suitable enclosure with proper wiring method that complies with the governing electrical codes.
- For Class I Division 2 applications, use only Class I Division 2 listed or recognized accessories and modules approved for use within the 1794 platform.
Mounting on a DIN rail before installing the terminal base units

1. Position the DeviceNet adapter module (A) on an IEC standard, (35 x 7.5 x 1 mm) top-hat DIN rail (B), at a slight angle.
2. Hook the lip on the rear of the adapter onto the top of the DIN rail, and rotate the adapter onto the rail.
3. Press the adapter module down onto the DIN rail until flush. Locking tab C will snap into position and lock the adapter to the DIN rail.
4. If the adapter does not lock in place, use a screwdriver or similar device to move the locking tab down while pressing the adapter flush onto the DIN rail, and release the locking tab to lock the adapter in place. If necessary, push up on the locking tab to lock.
5. Connect the adapter wiring as shown under “Connecting Wiring” later in this document.

ATTENTION: During mounting of all devices, be sure that all debris (metal chips, wire strands, etc.) is kept from falling into the module. Debris that falls into the module could cause damage on power up.
Mounting (or Replacing) the Adapter on an Existing System

1. Remove the DeviceNet plug-in connector from the front of the adapter.
2. Disconnect any wiring jumpered to the adjacent terminal base.
3. Open the module latching mechanism and remove the module from the base unit to which the adapter will be attached.
4. Push the Flexbus connector toward the right side of the terminal base to unplug the backplane connection.
5. Release the locking tab and remove the adapter module.
6. Before installing the new adapter, notice the notch on the right rear of the adapter. This notch accepts the hook on the terminal base unit. The notch is open at the bottom. The hook and adjacent connection point keep the terminal base and the adapter tight together, reducing the possibility of a break in communication over the backplane.
7. Complete the adapter mounting as shown below. Push down and in at the same time to lock the adapter to the DIN rail. If the adapter does not lock in place, use a screwdriver or similar device to move the locking tab down while pressing the adapter flush onto the DIN rail, and release the locking tab to lock the adapter module in place. If necessary, push up on the locking tab to lock.

When the adapter is locked onto the DIN rail, gently push the Flexbus connector into the adapter to complete the backplane.

8. Reinstall the module in the adjacent terminal base unit.

9. Reconnect adapter wiring as described in “Connecting Wiring.”

Connect Wiring

1. Connect the DeviceNet cable to the removable connector as shown.
2. Insert connector into mating connector on the DeviceNet adapter module.
3. Connect +V DC power to the left side of the lower connector, terminal E.

**ATTENTION:**
- When connecting wiring, torque terminal screws D, E, and G to 0.8 N•m (7 lb-in).
- Do not wire more than 2 conductors on any single terminal.

4. Connect -V common to the left side of the upper connector, terminal D.
5. Connections G and F are used to pass +V DC power (G) and -V common (F) to the next module in the series (if required).

**NOTE:** Cable colors are shown on the wiring label on the front of the adapter module.

</tbody>
</table>

*CAN = Controller Area Network* 

**ATTENTION:** Power wiring must be less than 3 meters (9.8 ft) in length.
Set the Node Address

Set the node address using the 2-position thumbwheel switch. Valid settings range from 00 to 63. Press either the + or - buttons to change the number.

NOTE: The communication rate for the adapter is set by way of "baud detection" at power-up.

FLEX I/O DeviceNet Adapter Module

Enhancements to Firmware 3.001

Firmware revision 3.001 provides the following functionality to the 1794-ADN DeviceNet adapter.

- When you cycle power to the adapter in out-of-the-box mode (no rack configuration stored in the memory of the adapter), and there is a 32-point input or output module (1794-IB32 or 1794-OB32) on the rail, the adapter will detect the 32-point module as a 2-word module and allocate I/O space appropriately for the network connection.

- With firmware revision 3.001, when you cycle power to the adapter in out-of-the-box mode, if a 1794-IB32 module is detected, it will allocate two input words, and no output words, for the network connection. Similarly for the 1794-OB32, two output words, and no input words, are allocated for the network connection.

Corrected Anomalies

Firmware revision 3.001 corrects these anomalies:

</table>
• Input data issue in firmware revision 2.004
• In firmware revision 2.003 or earlier, the 32-point I/O modules would have only one input word and one output word allocated in the default out-of-the-box mode of operation for each 32-point module.

**If You Replace Firmware Revision 2.003 or Earlier Adapter With 1794-ADN Series C**

Take the following precautions when replacing a firmware revision 2.003 or earlier adapter with a firmware revision 3.001 or later adapter when the FLEX rail contains any 32-point modules.

• If out-of-the-box mode was used with the original adapter, the 32-point modules were configured to act as if they were 16-point modules. After changing to the firmware revision 3.001 adapter, it will not make a connection with the scanner because there will be a mismatch in the I/O sizes. The scanner will report an error 77, indicating the I/O size mismatch between the scanner and adapter.

  To resolve this I/O size mismatch, two changes must be made:
  – The scan list of the scanner must be updated to reflect the new I/O size of the adapter.
    In the case of each 1794-IB32 module, an extra input word must be added and the output word deleted. Similarly with each 1794-OB32 module, an extra output word must be added and the input word deleted.
  – After the scan list of the scanner has been updated to reflect the new I/O sizes, the I/O image of the controller will have to be adjusted, along with the ladder program of the controller, for any I/O that has shifted due to I/O image changes.

• If out-of-the-box mode was not used, and an RSNetWorx™ software-based configuration was downloaded to the original adapter, there are two cases to consider:
FLEX I/O DeviceNet Adapter Module

- The original configuration of the adapter is the same as the v3.001 out-of-the-box configuration of the adapter. In this case, the scanner will automatically make the I/O connection with the firmware revision 3.001 adapter. Once network setup is complete, downloading, and saving the original configuration to the adapter is recommended.

- The original configuration of the adapter does not match the firmware revision 3.001 out-of-the-box configuration of the adapter. In this case, the scanner will report an error 77, indicating an I/O size mismatch. To correct this issue, download the existing configuration to the adapter.

Specifications

ATTENTION: The adapter will not accept any downloads that could change its configuration while there is an active I/O connection between a scanner and the adapter. It will be necessary to either remove the scanner from the network or disable the scanlist entry in the scanner to the adapter, using RSNetWorx™ software, before configuration downloads can be done successfully to the adapter.

                                         • Article 58-2 of Radio Waves Act, Clause 3 |
| EAC                                   | Russian Customs Union TR CU 020/2011 EMC Technical Regulation |

---

**Certifications (when product is marked):**

- UL Listed Industrial Control Equipment, certified for US and Canada.
- European Union 2014/30/EU EMC Directive, compliant with:
  - EN 61326-1; Meas./Control/Lab., Industrial Requirements
  - EN 61000-6-2; Industrial Immunity
  - EN 61000-6-4; Industrial Emissions
  - EN 61131-2; Programmable Controllers (Clause 8, Zones A & B)
- European Union 2011/65/EU RoHS, compliant with:
  - EN 50581; Technical documentation
- Australian Radiocommunications Act, compliant with:
  - EN 61326-1; Industrial Requirements
- Korean Registration of Broadcasting and Communications Equipment, compliant with:
  - Article 58-2 of Radio Waves Act, Clause 3
- Russian Customs Union TR CU 020/2011 EMC Technical Regulation
**Mounting Dimensions**

- **A** = Mounting hole dimensions for optional mounting kit
- **B** = DIN rail
- **C** = Secure DIN rail approximately every 200 mm

Dimensions:
- **G** (Inches): 8.7 (3.4), 8.0 (3.2)
- **H** (Inches): 6.8 (2.7)
- **W** (Inches): 2.3 (0.83)
- **D** (Inches): 1.2 (0.3)
