**Installation and Operating Instructions**

**Bulletin 440P Small Metal Safety Position Switches**

with 5-Pin Male Micro (M12) Connectors

**IMPORTANT: SAVE THESE INSTRUCTIONS FOR FUTURE USE.**

This publication does not include all specifications, dimensions, or any special installation considerations. Refer to the product catalog pages for additional information.

---

**General Data**

- Safety contacts: 1 N.C.
- Auxiliary contacts: 1 N.O.
- Enclosure rating: Type 1
- IP65
- Rugged die cast housing
- 15 cm (6 in.) pigtail with 5-pin male micro (M12) QD
- Compact profile for access limited installation

**Principles, Standards, and Implementation**

Before installation in a safety application, a risk assessment should be performed to determine whether the specifications of this device are suitable for foreseeable operational and environmental characteristics of the machine which is to be controlled. Only the normally closed set of contacts are considered safety contacts.

When applying these limit switches in a safety system application, all applicable standards for application should be followed. Operating specifications must be followed and actuator must be displaced beyond the point where Direct Opening Action occurs. These devices are not to be used to directly control a motor.

</tbody>
</table>

---

**ATTENTION**

To avoid electrical shock and unintended operation of equipment, disconnect all power to the limit switch and the controlled equipment before proceeding with any repair or adjustment of the limit switch.

Improper selection or installation of the devices affect the integrity of the safety systems.

Personnel injury or death, property damage or economic loss can result.

Comply with ISO 14119 including selection, accessibility to the installation, arrangement and fastening, possible substitute actuation, access to the escape release, motivation to defeat, and actuation mode.

Management controls, working procedures, training, and additional protective measures should be used to minimize the motivation to defeat and to manage the use and availability of spare actuators.

Comply with ISO 13857 and ISO 13855 for guard openings and minimum (safe) distances.

Comply with IEC 62061 or ISO 13849-1 and ISO 13849-2 for functional safety.

**IMPORTANT**

Installation of Allen-Bradley Guardmaster products should be in accordance with local and/or national codes. Servicing energized industrial control equipment can be hazardous if not in accordance with recommended safety procedures.

EN ISO 14119 replaces EN 1088 as the harmonized standard for interlocking devices associated with guards.

**Operating Characteristics**

- Actuation Speed, Max.: 250 mm/s
- Actuation Speed, Min.: 100 mm/min
- Actuation Frequency, Max.: 6000 ops/hr
- Mechanical Life: 1 x 10⁷ operations at room temperature

**Environmental**

- Enclosure Type Rating: Type 1, IP65
- Operating Temperature (°C (°F)): 2…70°C (35.6…158°F)
- Pollution Degree: 3

**Physical Characteristics**

- Housing Material: Die cast alloy
- Actuator Material: Various polymers and metals
- Mounting: 2 x M4, any position
- Vibration: IEC 60068-2-6 (10…55 Hz, 0.35 mm amplitude)
- Shock: IEC 60068-2-7 (30 Gn 3 pulses per axis)
- Connection: 15 cm (6 in.) 5/22 AWG U/L AWIM 2464 pigtail with 5-pin male M12 QD
- Enclosure Color: Red body/black head

**WARNING**

1 For safe operation, the M12 female connector of the connecting cable must be rated 60V 3 A or higher per standard EN61984.

2 The M12 female connector of the connecting cable must have a minimum sealing of IP65 to maintain a pollution degree 3 rating.
Electrical life is dependent on load, therefore, operations are not applicable and withdrawn.

ISO 14119 defines types of interlocking devices and coding:

</tbody>
</table>

The products shown on this document conform with the Essential Health and Safety Requirements (EHSRs) of the European Machinery Directive. They are third party certified to EN 60947-5-1 and EN ISO 14119.

Declaration of Conformity and certification: www.rockwellautomation.com/certification/ce.page

### Mounting Dimensions [mm (in.)]

- **Panel Mount**
  - Panel mount clearance hole = 13 mm (0.51 in.) max.
  - **ATTENTION** Under no circumstances must the switch be actuated beyond the mechanical travel specified. Serious damage to the device and property could result.

### Maintenance

These devices require little maintenance, but routine visual inspection is recommended to keep foreign debris from collecting on the exterior actuators and rollers. Removing the operator head is not recommended as loose internal components may be lost or improperly re-installed.

### Actuation Guidelines

The method of actuation and over travel has significant influence on the service life of the limit switch. To maximize the service life, it is recommended to provide an actuator with a 30° pressure angle and a surface hardness of Rc-45 max.

### Lever Positioning

Some rotary switches are supplied with levers that are mechanically coupled to the actuating shaft. The lever may be removed and re-installed for cam tracking adjustment. See table below for torque recommendations.
