PowerFlex 750-Series Option Modules

These instructions cover the installation of the option modules that are listed below. For instructions on the installation of Network Communication option modules, refer to publication 750COM-IN002.

IMPORTANT Only one safety option module can be installed at a time. Simultaneous safety option installations are not supported.

### Compatible Ports

(1) For detailed instructions on installation of 11-Series I/O with the ATEX option module, see the PowerFlex 750-Series ATEX User Manual, publication 750-UM003.

(3) Must be installed in port 6 for integrated motion.

### Option Module Installation

![Option Module Installation Diagram](image)

0.45 N•m (4.0 lb•in)

IMPORTANT: When the Safe Speed Monitor option module (catalog number 20-750-S1) or the PowerFlex® 755/755T Integrated Safety Functions option module (catalog number 20-750-S4) is used with a Dual Incremental Encoder option module (catalog number 20-750-DENC-1) or the Universal Feedback Encoder option module (catalog number 20-750-UFB-1), both modules must be installed on the same backplane (ports 6, 5, 4).

Only the 20-750-S1 and the 20-750-DENC-1 are depicted in the illustration to the right.
Auxiliary Power Supply (20-750-APS) Installation

A connector cable is provided with Auxiliary Power Supply option module for use in PowerFlex 753 Drives and in PowerFlex 755 Frame 1 drives. The cable is used to connect the module to the backplane when installed on the upper control pod brackets.

**IMPORTANT**: Do not use the Auxiliary Power Supply option module with Frame 8 and larger drives. See the PowerFlex 750-Series AC Drives Installation Instructions, publication 750-IN001, for information on the connection of an external power supply to a Frame 8 and larger drive.

Option Module Installation Next to a PROFIBUS Option Module

Do not allow the lower T15 Torx™ mounting screw (Detail A) on a new module to make contact with the metal cable connector of an installed PowerFlex 20-750-PBUS PROFIBUS option module. Electrical contact of the two metal parts can cause faulty operation. Perform these steps to help prevent contact. If a PowerFlex 20-750-PBUS PROFIBUS option module is not in that port, disregard these steps.

1. Remove the lower T15 Torx mounting screw (Detail A) from the new module being installed.
   To remove the captive T15 Torx screw, the module must be removed to back the screw out of the mounting clip.
2. Replace the larger T15 Torx screw with the smaller spare T8 Torx mounting screw that was shipped with the PowerFlex 20-750-PBUS PROFIBUS option module.

ATTENTION: When used in an Integrated Motion on EtherNet/IP network application for firmware revisions 12 and later, both the 11-series and 22-series I/O modules must be installed only in port 7. You cannot use the ATEX card with the 11-series I/O module in port 7 when used in an Integrated Motion on EtherNet/IP application.

11-Series and 22-Series I/O Module Installation
