ATTENTION:

- Before installing, configuring, operating or maintaining this product, read this document and the documents listed in the Additional Resources section for installing, configuring, or operating equipment. Users should familiarize themselves with installation and wiring instructions in addition to requirements of all applicable codes, laws, and standards.
- Installation, adjustments, putting into service, use, assembly, disassembly, and maintenance shall be carried out by suitably trained personnel in accordance with applicable code of practice. In case of malfunction or damage, no attempts at repair should be made. The module should be returned to the manufacturer for repair. Do not dismantle the module.
- If this equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.
- Equipment designated as "XT" is certified for use only within a surrounding air temperature range of -25…70 °C (-13…158 °F). Equipment designated as "LXT" is certified for use only with a surrounding air temperature range of -25…70 °C (-13…158 °F) even when used with other "XT" equipment. Non-XT equipment is certified for use only within surrounding air temperature range of 0…60 °C (32…140 °F). The equipment must not be used outside of its range.
- Solid state equipment has operational characteristics differing from those of electromechanical equipment. Safety Guidelines for the Application, Installation and Maintenance of Solid State Controls, Industrial Automation Wiring and Grounding Guidelines, publication 1770-4.1, available from your local Rockwell Automation sales office or online at http://www.rockwellautomation.com/literature describes some important differences between solid state equipment and hard-wired electromechanical devices.

ATTENTION:

- Do not install this product until you read the documentation in your local language. Go to http://www.rockwellautomation.com/literature or contact your local sales office or Rockwell Automation representative.

ATTENTION:

- No instalare este producto antes de leer los documentos en su lengua. Llévese a cabo consultando la página web http://www.rockwellautomation.com/literature o entrando en contacto con su representante de Rockwell Automation regional.

ATTENTION:

ACHTUNG:

ATENÇÃO:

Attention:

WARNING: Special Conditions for Safe Use:

- This equipment must be mounted in an ATEX certified enclosure with a minimum ingress protection rating of at least IP54 (as defined in IEC60529) and used in an environment of not more than Pollution Degree 2 (as defined in IEC 60664-1) when applied in Zone 2 environments. The enclosure must utilize a tool removable cover or door.
- This equipment shall be used within its specified ratings defined by Rockwell Automation.
- Provision shall be made to prevent the rated voltage from being exceeded by transient disturbances of more than 140% of the rated voltage when applied in Zone 2 environments.
- This equipment must be used only with ATEX certified Rockwell Automation backplanes.
- Secure any external connections that mate to this equipment by using screws, sliding latches, threaded connectors, or other means provided with this product.
- Do not disconnect equipment unless power has been removed or the area is known to be nonhazardous.

ATTENTION: This equipment is intended for use in a Pollution Degree 2 industrial environment, in oversize Category II applications (as defined in IEC 60664-1), at altitudes up to 2000 m (6562 ft) without derating.

This equipment is not intended for use in residential environments and may not provide adequate protection against radio communication services in such.

This equipment is supplied as a type equipment. It must be mounted within an enclosure that is suitable designed for those specific environmental conditions that will be present and appropriately designed to prevent personal injury resulting from accessibility to live parts. The enclosure must have suitable flame-retardant properties to prevent or minimize the spread of flame, complying with a flame spread rating of SR or be approved for the application if non-metallic. The interior of the enclosure must be accessible only by the use of a tool. Subsequent sections of this publication may contain additional information regarding specific enclosure type ratings that are required to comply with certain product safety certifications.

In addition to this publication, see the following:

- Industrial Automation Wiring and Grounding Guidelines, publication 1770-4.1 for additional installation requirements.
- NEMA 250 and IEC 60529, as applicable, for explanations of the degrees of protection provided by different types of enclosures.

North American Hazardous Location Approval

The following information applies when operating this equipment in hazardous locations. Products marked "CL I DIV 2, GP A, B, C, D" are suitable for use in Class 1 Division 2 Groups A, B, C, D, Hazardous Locations and nonhazardous locations only. Each product is supplied with markings on the rating nameplate indicating the hazardous location temperature code. When combining products within a system, the most adverse temperature code (lowest "T" number) may be used to help determine the overall temperature code of the system. Combinations of equipment in your system are subject to investigation by the local authority having jurisdiction at the time of installation.

ATTENTION:

- Do not disconnect equipment unless power has been removed or the area is known to be nonhazardous.
- Do not disconnect connections to this equipment unless power has been removed or the area is known to be nonhazardous. Secure any external connections that mate to this equipment by using screws, sliding latches, threaded connectors, or other means provided with this product.
- Substitution of components may impair suitability for Class I, Division 2. If this product contains batteries, they must be changed only in an area known to be nonhazardous.

Informations sur l'utilisation de cet équipement en environnements dangereux:

Les produits marqués "CL I DIV 2, GP A, B, C, D" ne conviennent qu'à une utilisation en environnements de Classe I, Division 2 Groupes A, B, C, D dangereux et non dangereux. Chaque produit est livré avec des marques sur sa plaque d’identification qui indiquent le code de température pour les environnements dangereux. Lorsque plusieurs produits sont combinés dans un système, le code de température le plus défavorable (code de température le plus faible) peut être utilisé pour déterminer le code de température global du système. Les combinaisons d’équipements dans le système sont sujettes à inspection par les autorités locales qualifiées au moment de l’installation.

AVERTISSEMENT: RISQUE D’EXPLOSION

- Coupez le courant ou s’assurez que l’environnement est classé non dangereux avant de débrancher l’équipement.
- Coupez le courant ou s’assurez que l’environnement est classé non dangereux avant de débrancher les connecteurs. Fixez tous les connecteurs externes reliés à cet équipement à l’aide de vis, loquets coulissants, connecteurs filets ou autres moyens fournis avec ce produit.
- La substitution de composants peut rendre cet équipement inadapté à une utilisation en environnement de Classe I, Division 2.
- Assurez-vous que l’environnement est classé non dangereux avant de changer les piles.

European Hazardous Location Approval

The following applies to products marked II 3 G such modules:

- are Equipment Group II, Equipment Category 3, and comply with the Essential Health and Safety Requirements relating to the design and construction of such equipment given in Annex II to Directive 94/9/EC. See the EC Declaration of Conformity at http://www.rockwellautomation.com for details. The type of protection used is “Ex nA IIC T- or Ex nC IIC T-” according to EN 60079-15. The specific temperature code is documented in the Additional Resources section and must be verified by the installer by comparing it with the temperature code marked on the product.
- are intended for use in areas in which explosive atmospheres caused by gases, vapors, mists, or air or dust mixtures are unlikely to occur, or are likely to occur only infrequently and for short periods. Such locations correspond to Zone 2 classification according to ATEX directive 1999/92/EC.
Network Connectors and Cable

This product may contain a USB port.

**WARNING:** Local programming ports, network access ports (NAP), and USB ports are intended only for temporary use and must not be connected or disconnected unless the area is nonhazardous. Do not use the USB port in hazardous locations.
