Precautions

IMPORTANT The ArmorKinetic system is compatible with 200V-class and 400V-class Kinetix® 5700 drive systems.

ATTENTION: Do not attempt to open or modify the ArmorKinetic PIM, DSD, or DSM module.

ATTENTION: To avoid personal injury and damage to the motor, do not lift or handle the motor by the motor shaft. The cap on the shaft can come loose and cause you to drop the motor. To avoid personal injury and damage to the DSD or DSM, do not lift or handle the DSD or DSM by the hybrid connectors.

ATTENTION: The DSD and DSM modules connect to a power interface module (PIM) module that stores residual voltage for an extended period of time. Do not connect a DSD or DSM to a PIM module immediately after removing power to the PIM module. Allow the residual power stored in the PIM module to dissipate for 5 minutes after power is removed from the ArmorKinetic system. This extended discharge period is needed for the system power to return to a nominal voltage that is acceptable for reconfiguration of the system.

ATTENTION: DSD and DSM units are not intended for direct connection to an AC power line. The DSD and DSM units are designed for connection to a PIM module that controls the application of power.

SHOCK HAZARD: Labels may be on or inside the equipment (for example, drive or motor) to alert people that dangerous voltage may be present.

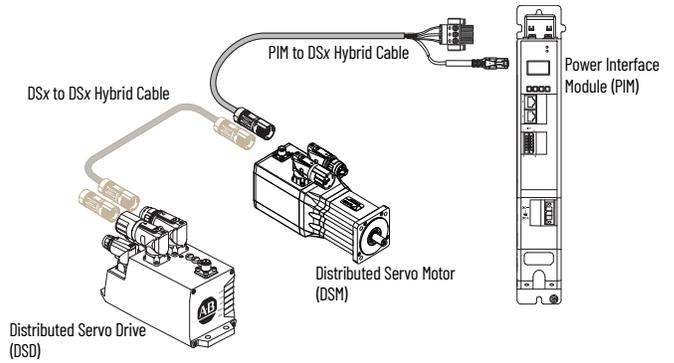

ATTENTION: Only qualified personnel familiar with servo drives and associated machinery should plan or implement the installation, startup, and subsequent maintenance of the system. Failure to comply can result in personal injury and/or equipment damage.

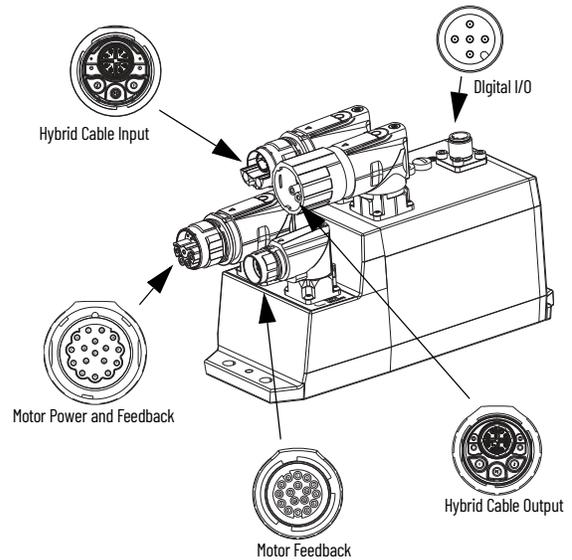

ATTENTION: An incorrectly applied or installed drive can result in component damage or a reduction in product life. Wiring or application errors such as undersizing the motor, incorrect or inadequate AC supply, or excessive surrounding air temperatures can result in malfunction of the system.

IMPORTANT The DSD and/or DSM power must be supplied by a PIM. The PIM operates from one of the compatible Kinetix 5700 power configurations.

PIM Dimensions

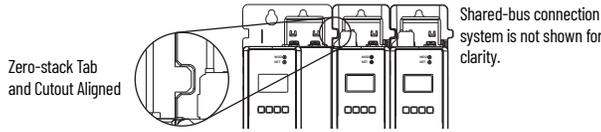

Mount the PIM

Observe these clearance requirements when mounting the power interface module:

- Additional clearance is required for cables and wires or the shared-bus connection system that is connected to the top of the drive.
- Additional clearance is required if other devices are installed above and/or below the drive and have clearance requirements of their own.
- Additional clearance left and right of the drive is required when mounted adjacent to noise sensitive equipment or clean wire ways.
- The recommended minimum cabinet depth is 300 mm (11.81 in.).

Refer to the Kinetix 5700, 5500, 5300, and 5100 Servo Drives Technical Data, publication [KNX-TD003](#), for ArmorKinetic PIM module dimensions.

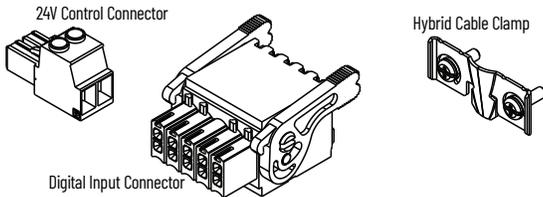

The ArmorKinetic PIM module must be spaced by aligning the zero-stack tab and cutout. For ArmorKinetic PIM hole patterns, see the ArmorKinetic System User Manual, publication [2198-UM006](#). For Kinetix 5700 drive hole patterns, see the Kinetix 5700 Servo Drives User Manual, publication [2198-UM002](#).

Mount the ArmorKinetic PIM to the cabinet subpanel with M5 (#10-32) steel bolts torqued to 4.0 N•m (35.4 lb•in), max.

PIM Connector Kit

The PIM connector kit, catalog number 2198-KITCON-PIM070, contains these items. See [PIM Connectors and Indicators on page 3](#) for location of these items.

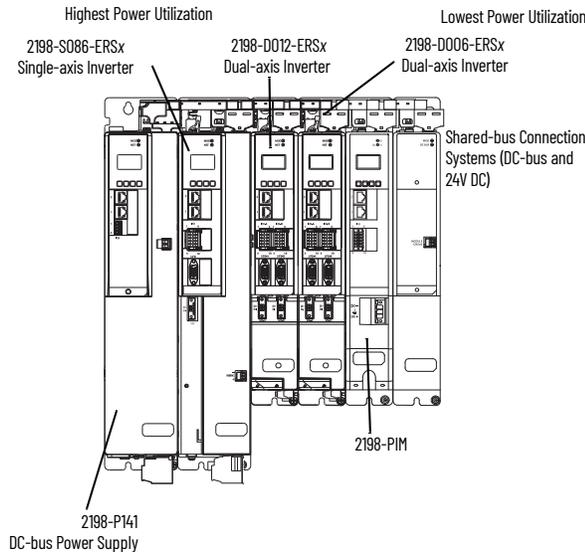

DC-bus Link Kit

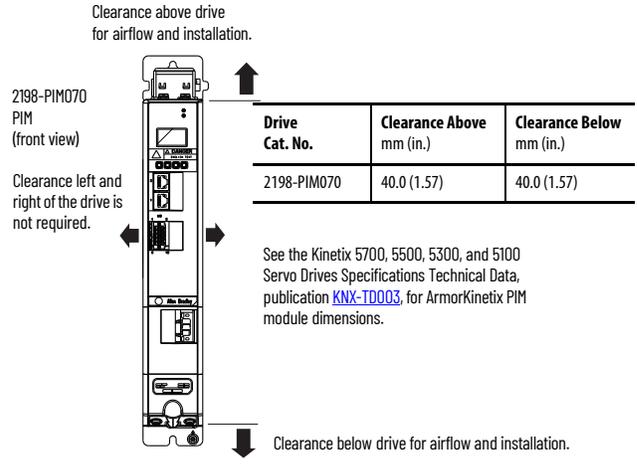

The DC-bus link kit, catalog number 2198-BARCON-55DC200, is included with the PIM. For more information, see Kinetix 5700 DC-bus Link Kits Installation Instructions, publication [2198-IN007](#).

Determine Mounting Order

Refer to the Module Mounting Order Example diagram. The PIM can be placed anywhere left or right from the power supply module.

Minimum Clearance

IMPORTANT Mount the drive in an upright position as shown. Do not mount the drive on its side.

Ground the System

The PIM should be mounted to the conductive surface, the same as the rest of the in-cabinet drives. The DSM or DSD can be mounted to any surface. The safety GND is completed through the 'green' wire in the hybrid cable.

Mount the DSx

DSx module installation must comply with all local regulations and use of equipment and installation practices that promote safety and electromagnetic compatibility:

- All DSx modules include a mounting pilot for aligning the module on a machine.
- Recommended mounting screws are stainless steel, size M5. Tighten the mounting screws to 6.4 N•m (57 lb•in).

ATTENTION: Unmounted motors, disconnected mechanical couplings, loose shaft keys, and disconnected cables are dangerous if power is applied. Identify (tag-out) disassembled equipment and restrict access to (lock-out) the electrical power. Before applying power to the motor, remove the shaft key and other mechanical couplings that could be thrown from the shaft.

ATTENTION: Verify that cables are installed and restrained to prevent uneven tension or flexing at the connector. Provide support at 3 m (10 ft) intervals throughout the cable run. Excessive and uneven lateral force at the cable connector can result in the connector's environmental seal opening and closing as the cable flexes.
