

# I/O Device Library

Release v5.04

**Allen-Bradley**

by ROCKWELL AUTOMATION

**Reference Manual**

Original Instructions

# Important User Information

Read this document and the documents listed in the additional resources section about installation, configuration, and operation of this equipment before you install, configure, operate, or maintain this product. Users are required to familiarize themselves with installation and wiring instructions in addition to requirements of all applicable codes, laws, and standards.

Activities including installation, adjustments, putting into service, use, assembly, disassembly, and maintenance are required to be carried out by suitably trained personnel in accordance with applicable code of practice.

If this equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

In no event will Rockwell Automation, Inc. be responsible or liable for indirect or consequential damages resulting from the use or application of this equipment.

The examples and diagrams in this manual are included solely for illustrative purposes. Because of the many variables and requirements associated with any particular installation, Rockwell Automation, Inc. cannot assume responsibility or liability for actual use based on the examples and diagrams.

No patent liability is assumed by Rockwell Automation, Inc. with respect to use of information, circuits, equipment, or software described in this manual.

Reproduction of the contents of this manual, in whole or in part, without written permission of Rockwell Automation, Inc., is prohibited.

Throughout this manual, when necessary, we use notes to make you aware of safety considerations.

**WARNING:** Identifies information about practices or circumstances that can cause an explosion in a hazardous environment, which may lead to personal injury or death, property damage, or economic loss.

---

**ATTENTION:** Identifies information about practices or circumstances that can lead to personal injury or death, property damage, or economic loss. Attentions help you identify a hazard, avoid a hazard, and recognize the consequence.

---

---

**IMPORTANT**

Identifies information that is critical for successful application and understanding of the product.

---

These labels may also be on or inside the equipment to provide specific precautions.

**SHOCK HAZARD:** Labels may be on or inside the equipment, for example, a drive or motor, to alert people that dangerous voltage may be present.

---

**BURN HAZARD:** Labels may be on or inside the equipment, for example, a drive or motor, to alert people that surfaces may reach dangerous temperatures.

---

**ARC FLASH HAZARD:** Labels may be on or inside the equipment, for example, a motor control center, to alert people to potential Arc Flash. Arc Flash will cause severe injury or death. Wear proper Personal Protective Equipment (PPE). Follow ALL Regulatory requirements for safe work practices and for Personal Protective Equipment (PPE).

---

The following icon may appear in the text of this document.

Identifies information that is useful and can help to make a process easier to do or easier to understand.

### Device Object Libraries Overview

Our Device Object Libraries enable you to easily interface with Rockwell Automation intelligent devices like drives, motion, network switches, sensors, IO and more. The libraries contain tested, documented, and lifecycle-managed objects which can be used with machine builder, process, and packaged libraries or as standalone components. Device objects include HMI faceplates for FactoryTalk® View ME/SE and Studio 5000 View Designer® software and provide a user interface that seamlessly integrates with the products.

HMI faceplates are standard display files that provide a common user interface. These are HMI pop-up screens used to display detailed information related to a specific instruction or device. In systems that follow ISA 101.1 design guidelines, faceplates are often referred to as Level 4 displays.

Pre-configured Device Objects include an Add-On Instruction Rung and an HMI Faceplate providing the following benefits:

- Collect, Process and Deliver Data between Smart Devices and Application Logic
- Detailed Device Data Collection and Delivery
- Enhanced Device Status and Diagnostics
- Common Control Interfaces maximizing Flexible Automation Device Selection & Application Code Reuse

Device Object Use Cases:

- Basic Device Maintenance and Diagnostics
- Virtual Device Operations for Startup and Commissioning
- Operator and Program Control for Velocity Machine and Process Applications

Device Object Libraries may be downloaded from the [Product Compatibility and Download Center](#). Search for “Library”.

---

### Application Code Manager

Studio 5000® Application Code Manager is a tool that can be used with Device Object Libraries to streamline project and machine development. This bulk coding tool allows you to easily design and standardize functionality with reusable application code.

Enable more efficient project development with reusable libraries of code:

- Quickly create and deploy projects through our Application Content Libraries
- Import Rockwell provided application content libraries to expedite system development
- Build your own reusable code that can be managed and deployed across your entire enterprise

- Easily configure objects in bulk with reusable code to increase application development, no additional programming is necessary
- Consolidate content for Studio 5000 Logix Designer®, FactoryTalk® View Studio, FactoryTalk® Alarms & Events, FactoryTalk® Historian to configure an object a single time and generate content for each of those software packages.

See the section on [Using the Library with Application Code Manager](#) for more details.

## Other Application Code Libraries

This Device Object Library may be used in harmony with other Application Code Libraries including other Device Object Libraries (Network, IO, IO-Link, Safety Device Libraries) or Application Libraries (PlantPAX® Process Objects library, Machine Builder Libraries). All libraries are intended to follow similar design philosophies to provide a consistent experience for operators and maintenance staff.

A complete list of Application Code Libraries from Rockwell Automation® follows.

Item	Description
PlantPAX® Process Library	Rockwell Automation® Library of Process Objects provides application templates, Endress + Hauser library objects, Application Code Manager library objects, and tools and utilities for PlantPAX® DCS applications. Includes the following: <ul style="list-style-type: none"> <li>• Graphics for built-in instructions</li> <li>• HMI images and Help files</li> <li>• Logix diagnostic objects</li> <li>• Process objects</li> <li>• Control strategies</li> <li>• Sequencer objects</li> <li>• PlantPAX® Configuration Tools for Tags, Alarms and Historian</li> <li>• Color Change</li> <li>• Historian -- Asset Framework template and objects</li> </ul>
Machine Builder Libraries	Tested, documented and life-cycle managed library objects and faceplates for use with Studio 5000® Application Code Manager for use primarily with OEM and discrete machine applications.
Common Application Libraries	Commonly used application library objects and faceplates for use with Studio 5000® Application Code Manager including basic functions like unit conversion and data collection.
Independent Cart Technology Libraries	ICT Libraries for iTRAK and MagneMotion including MagneMover LITE and QuickStick for Studio 5000® Application Code Manager
I/O Device Library	Provides objects for Rockwell Automation 1756, 1769, 1734, 1794, 1738, 1732E, 1719, 5069, 5094 I/O modules including pre-configured status and diagnostic faceplates
IO-Link Device Library	Provides IO-Link master and sensor objects including pre-configured status and diagnostic faceplates
Network Device Library	Provides objects for Stratix® switch and Device Level Ring network objects
Power Device Library	Provides objects for discrete, velocity, motion, and power monitor devices
Safety Device Library	Provides safety objects to interface with safety I/O
Condition Monitoring Device Library	Provides Dynamix™ -1444 module and machinery Condition Monitoring applications such as motors and pumps. This includes FactoryTalk View® SE HMI faceplates and Studio 5000® Application Code Manager implementations.
Electrical Protection Device Library	Provides a standard to represent protection devices within your electrical distribution system

Libraries can be accessed from the [Product Compatibility and Download Center](#).

## Software and Firmware Upgrades

When you update software or firmware revisions, we recommend that you verify the impact on performance and memory utilization before implementing the upgrade on the production system. For FactoryTalk® View or ControlLogix® platforms, we recommend that you review the release notes and verify the impact of the upgrade on performance and memory utilization.

You can also verify the compatibility of the upgrade with the installed software and operating systems in use on your system. See the [Product Compatibility and Download Center](#).

## Rockwell Automation Services and Support

System Support offers technical assistance that is tailored for control systems. Some of the features include the following:

- Highly experienced team of engineers with training and systems experience
- Use of online remote diagnostic tools
- Access to otherwise restricted TechConnect<sup>SM</sup> Knowledgebase content
- 24-hour, 7 days per week, 365 days per year of phone-support coverage upgrade option

For more information, contact your local distributor or Rockwell Automation representative or see <http://www.rockwellautomation.com/support>.

You can view or download publications at <http://www.rockwellautomation.com/literature>. To order paper copies of technical documentation, contact your local Allen-Bradley distributor or Rockwell Automation sales representative.

## Rockwell Automation® IO Device Library

The IO Device Library is a tested, documented, and life cycle managed object library. The Device Library provides pre-configured status and diagnostic faceplates sets for Rockwell Automation® I/O Modules. Additionally, the library includes Studio 5000® Application Code Manager module objects that allow users to easily add and configure I/O in their project. The IO Device Objects may be used with Machine Builder, Process, and Packaged Libraries or as standalone components.

The IO Device Library includes HMI Faceplates for FactoryTalk® View ME, FactoryTalk® View SE, and Studio 5000 View Designer® compatible with Allen-Bradley® I/O modules. This document includes the functional requirements of the IO device objects.

The IO Device Library may be downloaded from the [Product Compatibility and Download Center](#). Search for IO Device Library.

## Compatibility

### Compatible Software

- Studio 5000 Logix Designer® V30.01.00, v31.02.00, v32.04.00, v33.01.01, v34.01.00 v35.01.00 for PAC Application Development
- Studio 5000® Application Code Manager v4.01 and later for bulk code configuration
- Studio 5000 View Designer® v8.02.00 and later for PanelView™ 5000 Application Development
- FactoryTalk® View Studio v10.00.01 and later for PanelView™ Plus and FactoryTalk® View SE Application Development

### Compatible Hardware

- PanelView™ 5500/5510/5310 with v5 or later firmware
- PanelView™ Plus v10 or later firmware
- ControlLogix® 5580/5570, CompactLogix® 5580/5570, GuardLogix® 5580/5570, or Compact GuardLogix® 5580/5570 controller with v30.01 or later firmware. Note GuardLogix® or Compact GuardLogix® controllers are required for use with Safety class I/O modules.
- Allen-Bradley I/O Modules including:
  - 1715 High-Availability I/O
  - 1719 Ex I/O
  - 1732E I/O

- 1734 POINT I/O
- 1738 I/O
- 1756 ControlLogix I/O
- 1756 EN4TR
- 1769 Compact I/O
- 1791ES Guard I/O
- 1794 Flex I/O
- 5015 FLEXHA 5000 I/O
- 5069 Compact 5000 I/O
- 5094 FLEX 5000 I/O
- 5032 Configurable Module I/O
- HART Modules

Note that the 5032-CFGB16M12xxxxx supports Logix Designer v35 or later, 5094-IJ2I/S supports Logix Designer v32 or later, 5069-IF4IH/OF4IH supports Logix Designer v33 or later.

## Summary of Changes

This publication contains the following new or updated information. This list includes substantive updates only and is not intended to reflect all changes.

This release consists of new module faceplate and updated ACM Library.

Topic	Revision	Page
Added new Faceplate in 5094 series module	D	Throughout
Added new Faceplate in 5069 series module	D	Throughout
Added 5032 series module	D	Throughout
Updated ACM files for 5069-AENTR and 5069-AEN2TR	D	Throughout
Updated 5094-IF8IH and 5094-OF8IH Faceplates	D	Throughout
Updated Using Application Code Manager for PlantPAx section	D	<a href="#">125</a>

## Footprint

Each instruction requires memory footprint within the Logix controller. The following characteristics apply:

- **Definition:** Estimated memory required to store the object definition, including all dependents
- **Instance:** Estimated memory required per object instantiated.
- **Execution (L85E):** Estimated execution time / scan footprint evaluated in 1756-L85E PAC

### Device Object Footprint

Device Object	Definition (kB)	Instance (kB)	Execution (µs)

## Library Components

### IO Device Library

The IO Device Library includes HMI faceplates to interface with Allen-Bradley® I/O Modules. There are no Add-On Instructions or additional programming required. All HMI faceplates communicate directly with I/O module data structures that are pre-defined in the Logix controllers when the I/O module is defined in a project.

Note: 1756-ENTR includes pre-configured status and diagnostic faceplate with Add-on instruction.

All I/O module faceplates have similar functions. The HMI faceplate displays diagnostic information such as module or channel faults along with I/O channel status and data. HMI tags are also provided for FactoryTalk® View ME/SE projects to support multi-tab navigation.

The IO Device Library also contains Studio 5000® Application Code Manager module objects. This allows users to add Allen-Bradley® I/O Modules, or HART modules to a project in Studio 5000® Application Code Manager.

This manual has grouped faceplates by module type as follows:

- Discrete Input
- Discrete Output
- Analog Input
- Analog Output
- Analog Input with HART
- Analog Output with HART
- Safety Discrete Input
- Safety Discrete Output
- Safety Analog Input
- 1715 Simplex and Duplex I/O
- 5015 Simplex and Duplex I/O
- High Speed Counter
- Sequence of Events
- Rack Optimized
- Redundant adapter

All objects in this library are considered devices:

- Device (Dvc): instruction used for devices (e.g. I/O Modules).

### Library Folders and Files

When you extract the library from the downloaded .zip folder, you will find the following folder and file structure. Note that some items are generalized with

*TYPE* (e.g. Analog, Digital, Communications), *FAMILY* (1756, 5094, etc), *MODULE* (e.g. OB16, IF8, etc) and *SER* (series e.g. A/B/C). The major and minor versions are represented by X and Y respectively.

# Visualization Files

Each Add-On Instruction or IO-Module has associated visualization files that provide a common user interface. The IO Device Library supports two HMI options each with their own files supplied:

- FactoryTalk® View ME (Machine Edition)
- FactoryTalk® View SE (Site Edition)
- Studio 5000 View Designer®

## FactoryTalk® View Visualization Files

You must import these files in the following order:

- Images (.png files)
- Global Objects(.ggfx file type)
- HMI faceplates (.gfx file type)

File Type Abbreviations	FactoryTalk® View ME	FactoryTalk® View SE	Description
Images (.png)	All .png files in the <i>HMI FactoryTalk® View Images - png</i> folder. <b>IMPORTANT:</b> FactoryTalk® View application renames PNG files when they are imported with a .bmp file extension, but the files retain a .png format.	All .png files in the <i>HMI FactoryTalk® View Images - png</i> folder. <b>IMPORTANT:</b> FactoryTalk® View application renames PNG files when they are imported with a .bmp file extension, but the files retain a .png format.	Common icons that are used in the Global Objects and standard displays for all objects.
Global objects (.ggfx)	(raC-5-ME) Graphic Symbols - IO Device.ggfx	(raC-5-SE) Graphic Symbols - IO Device.ggfx	Graphic symbols or launch buttons used to open faceplate displays from other displays.
	(raC-5-ME) Toolbox - IO Device.ggfx	(raC-5-SE) Toolbox - IO Device.ggfx	Common objects used across multiple device faceplates.
Standard displays (.gfx)	(raC-5_XX-ME) precedes name of the display.	(raC-5_XX-SE) precedes name of the display.	e.g. (raC-5_00-SE) raC_Dvc_1756-IB16-Faceplate.gfx

Global object files contain Graphic Symbols that are created once and referenced multiple times on multiple displays in an application. When changes are made to a global object, all instances in the application are automatically updated.

Global objects serve two purposes:

- Toolbox files contain common elements that are used to build faceplate displays.
- Graphic Symbols files contain device symbols or launch buttons that you can use to build your application displays. Select the symbol to open the corresponding faceplate display.

Standard display files, commonly called faceplates, provide a common user interface.

A complete list of FactoryTalk® View SE/ME HMI Faceplates is provided below by I/O family.

## Studio 5000 View Designer® Visualization Files

A View Designer project file for each I/O family is supplied which contain faceplates and launch buttons for the IO Device Library. These files are found in the *HMI - ViewDesigner - vpd* folder. Inside of the VPD file you will find a the required display files inside of the *User-Defined Screens* folder.

A complete list of View Designer files follows:

Basic Faceplate Attributes

Faceplates consist of tabs, and each tab consists of one or more pages. The Home tab is displayed when the faceplate is initially opened. The faceplate provides the means for operators, maintenance personnel, engineers, and others to interact with a device or instruction instance, which includes a view of its status and values. Faceplates may also manipulate an instruction through its commands and settings. Select the appropriate icon on the left of the faceplate to access a specific tab. This section provides an overview of the faceplate attributes that are common across the objects. More details are supplied in the individual section for each object.

## Common Status Banner

At the top of all device object faceplates there is a common status banner which provides the following information:

- Ready (green LED icon)
- Not Ready Module Fault (yellow LED icon) status
- Channel Fault - Module is ready and one or more channels goes into fault state

## Faceplate Navigation

All device object faceplates have navigation tabs on the left side of the faceplate. Navigation tabs may vary based on device type. The active tab will show as a light grey, while an inactive tab will show as a dark grey.

Active Tab

Inactive Tab

The common tabs are shown below.

Home Tab

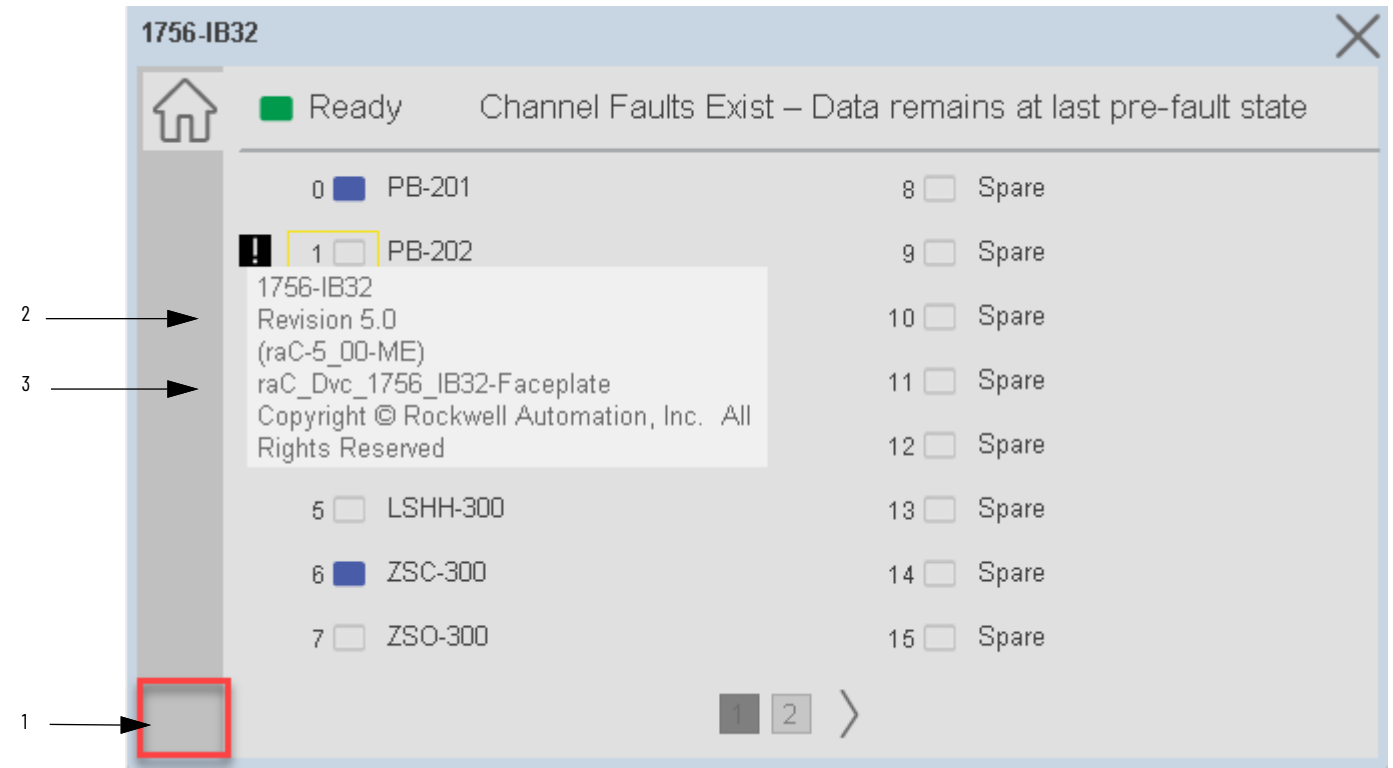

Diagnostics Tab

## Faceplate Revision Notes

By clicking on the open space near the bottom left corner of the faceplate you can momentarily view revision notes and details of the active faceplate. This

may be useful in troubleshooting or when communicating with Rockwell Automation Tech Support.

Item	Description
1	Click near the bottom right corner to temporarily open up the revision notes dialogue
2	Revision number
3	Faceplate display name

Launch Buttons

Launch buttons are provided in Global Display (GGFX) files for FactoryTalk View® ME/SE as well as in Studio 5000 View Designer® projects. These are used to open HMI faceplate displays or pop-ups. Two types of launch buttons are provided:

Launch Button Style	Image Examples	Usage
Basic Text Button		Simple launch button with no diagnostic information.
Graphical Button		Graphic button can be used in schematic style displays where a system/network diagram is shown. When available, basic module diagnostics are displayed.

## Diagnostic Icons

Diagnostic icons may be displayed on the graphic buttons for compatible modules. Safety modules are designated with a small guard icon.

Icon	Image	Visible Condition
Communications Failure		Connection Faulted
Fault		Any channel fault or Diagnostic Active
Guard		Safety Class Modules

## Schematic Display Configuration

Additional icons are provided to represent I/O communications adapters, chassis, CPUs and slot fillers. Adapter icons can use Global Object Parameters to assign a label to the I/O rack. These icons can be used together to allow users to build schematic diagrams. The IO Device Library graphics can also be used along with similar buttons available in the Network Device Library Vxx.xx and Power Device Library Vx.xx.

It is recommended set the Grid Snap ON with settings  $z = 4$ ;  $y = 4$  when using the graphic symbols in FactoryTalk View® ME/SE. This will make it easier to align modules in a chassis configuration.

A legend is provided in the FactoryTalk View® ME/SE global object displays (*raC-5-ME*) *Graphic Symbols - IO Device* and (*raC-5-SE*) *Graphic Symbols - IO Device*.

LEGEND	
> DC: Direct Current	>  : Safety Class Module
> AC: Alternating Current	>  : Input
> AI: Analog Input	>  : Output
> AO: Analog Output	>  : Communications Failure
> SPEC: Specialty Module	>  : Fault
> CPU: Central Processing Unit	>  : Warning
> COM: Communications Module	>  : Not Ready
	>  : Virtual Mode
	>  : Running/Active
	>  : Stopped

An example of a complete system is shown below. This system includes objects from the IO Device Library, Network Device Library and Power Device Library.

## Library Versions

Each library object has a revision x.yy where: x is the Major Revision number and yy is the Minor Revision number. Each release of the library comes with release notes that describe the changes that were made since the last release. You can find the revision number of the object in a number of locations as shown below.

Component	Example
The faceplate in FactoryTalk® View software has revision information visible when the pointer is clicked just inside the lower left corner of the faceplate.	
The revision number is shown in the file names for GFX, VPD and ACM.HSL4 files	

## Application Code Manager

### Modules

Module type objects are provided for use with Studio 5000® Application Code Manager. This allows users to add I/O modules to their project in Application Code Manager. Modules must be added to compatible chassis or adapters.

A complete list of the included Application Code Manager module objects follows:

## HART Devices

A collection of HART devices is provided for use in Application Code Manager. This allows users to add devices to 5094 FLEX 5000 Analog HART Input/Output modules. A complete list of files is provided below.

HART Device	Application Code Manager File
0304-NEWTHERMOX	(RA-LIB)_ACM_2.00_Module_HART_Device_0304-NEWTHERMOX_(5.2).HSL4
OA01-TRI20	(RA-LIB)_ACM_2.00_Module_HART_Device_OA01-TRI20_(5.2).HSL4
OA02-BI_38XXVA	(RA-LIB)_ACM_2.00_Module_HART_Device_OA02-BI_38XXVA_(5.2).HSL4
OA04-QUANTIM	(RA-LIB)_ACM_2.00_Module_HART_Device_OA04-QUANTIM_(5.2).HSL4
OD14-Series_Gas_USM_3400	(RA-LIB)_ACM_2.00_Module_HART_Device_OD14-Series_Gas_USM_3400_(5.2).HSL4
OD15-Series_Gas_USM_3410	(RA-LIB)_ACM_2.00_Module_HART_Device_OD15-Series_Gas_USM_3410_(5.2).HSL4
OD28-Series_Liquid_USM_3800	(RA-LIB)_ACM_2.00_Module_HART_Device_OD28-Series_Liquid_USM_3800_(5.2).HSL4
OD29-Series_Liquid_USM_3810	(RA-LIB)_ACM_2.00_Module_HART_Device_OD29-Series_Liquid_USM_3810_(5.2).HSL4

HART Device	Application Code Manager File
1103-FMU860	(RA-LIB)_ACM_2.00_Module_HART_Device_1103-FMU860_(5.2).HSL4

## HMI Tags

The IODevice Library contains "*FTViewStudio\_IOLibrary\_Tags\_5\_00.CSV*", which is used by FactoryTalk® View Site Edition and FactoryTalk® View Machine Edition applications to operate the page navigation and revision screens. The CSV import file includes the following tags:

Member	Description	Data Type
IOLibNavTag	Page navigation tag	INT
IOLibRevTag	99 = Revision screen is active on the device.	INT

## State Model

The following section will discuss the state model for Device Object. The figure below shows the core logic states.

By default, each state is active for a minimum of 256us to allow for evaluation of state outside of the ADO instance in the user program

## Interfaces

Device object interfaces are intended to provide the application programmer a class based harmonized interface for interacting with the device object from user code. Standard control interfaces are used for passing device inputs (Inp), device configuration (Cfg), Settings (Set), Commands (Cmd) and Status (Sts).

The following IO-Device Common Control Interface tags are the primary device program tags to read and write to when interfacing to IO-Devices. The value of using these tags in your specific application code is that you may use a number of different IO-Devices such as 1756-EN4TR without having to update your application device interface tags.

For detailed information on specific interfaces, please refer to the appropriate section in this manual. A list of interface UDTs used in this library follows. Note that *OBJECT* used in the Inp interfaces is replaced with the specific IO-Device object (e.g. 1756-EN4TR).

Interface Class	Object Class	Object Sub-Class	Interface Type	Interface Name (UDT)
Control	IO-Device	IO-Devices	Setting	raC_UDT_ItfAD_IODevice_CtrlSet
			Command	raC_UDT_ItfAD_IODevice_CtrlCmd
			Status	raC_UDT_ItfAD_IODevice_CtrlSts
			Information	raC_UDT_ItfAD_IODevice_Inf
			Interfacing	raC_UDT_ItfAD_IODevices

## Data Types

The following IO-Device Common Control Interface tags are the primary device program tags to read to when interfacing to IO-Devices. The value of using these tags in your specific application code is that you may use a number of different IO-Devices such as 1756-EN4TR without having to update your application device interface tags.

### raC\_UDT\_ItfAD\_IODevice\_Cmd

This is the IO-Device Common Control Interface User-Defined Data Type for device commands. Its members provide application program access to common device commands.

The table below shows member names, descriptions, and tag data types. Note: Physical & Virtual members are not currently used in the Add-On Instruction and are reserved for future use.

Member	Description	Data Type
bCmd	Bit Overlay (Visible) covering all subsequent boolean members.	DINT
Physical	1 = Operate as Physical Device.	BOOL
Virtual	1 = Operate as Virtual Device.	BOOL
ResetWarn	1 = Reset device warning.	BOOL
ResetFault	1 = Reset device trip or fault.	BOOL

### raC\_UDT\_ItfAD\_IODevice\_Inf

This is the IO-Device interfacing data which provide the device type information to the IO-Device.

The below table shows detailed information of members used in this UDT tag.

Member	Description	Data Type
ModulePath	Module CIP path.	STR0032
bExtensionEnabled	Object extension is present in the controller, represented bitwise: 0 = False, 1 = True.	DINT

## raC\_UDT\_ItfAD\_IODevice\_Set

This is the IO-Device Common Control Interface User-Defined Data Type for device settings. Its members provide application program access to allow or inhibit commands and settings from the device faceplate or other external sources. The table below shows member names, descriptions, and tag data types.

For example, to inhibit write commands from the device faceplate or other external sources write a 1 to the \_InstanceName\_CtrlrSet.InhibitCmd program tag from your application program. This would prevent a Locate, Reset count, Reset Duration commands from the device faceplate.

Member	Description	Data Type
blnhibit	Inhibits (Bit Overlay).	DINT
InhibitCmd	1 = Inhibit user Commands from external sources, 0 = Allow.	BOOL
InhibitSet	1 = Inhibit user Settings from external sources, 0 = Allow.	BOOL
InhibitCfg	1 = Inhibit user Configuration from external sources, 0 = Allow.	BOOL

## raC\_UDT\_ItfAD\_IODevice\_Sts

This is the IO-Device Common Control interfacing Status tag. By configuring these tags, we can read various status from the device like Ready, Connected, and Available etc. The below table shows detailed information of members used in this UDT tags. Note: Physical & Virtual members are not currently used in the Add-On Instruction and are reserved for future use.

Input	Description	Data Type
eState	Enumerated state value: 0 = Unused 1 = Initializing 2 = Disconnected 3 = Disconnecting 4 = Connecting 5 = Idle 6 = Configuring 7 = Available	DINT
FirstWarning	First Warning Event Data	raC_UDT_Event
FirstFault	First Fault Event Data	raC_UDT_Event
eCmdFail	Enumerated command failure code.	DINT
bSts	Bit overlay (Visible) covering all subsequent boolean members.	DINT
Physical	1 = Controlling physical device.	BOOL

Input	Description	Data Type
Virtual	1 = Controlling virtual device.	BOOL
Connected	1 = PAC to device connection has been established.	BOOL
Ready	1 = Device is ready to ...	BOOL
Warning	1 = A warning is active on the device.	BOOL
Faulted	1 = A fault is active on the device.	BOOL

## raC\_UDT\_Event

Member	Description	Data Type
Type	Event type: 1 = Status 2 = Warning 3 = Fault 4...n = User	DINT
ID	User definable event ID.	DINT
Category	User definable category (Electrical,Mechanical,Materials,Utility,etc.).	DINT
Action	User definable event action code.	DINT
Value	User definable event value or fault code.	DINT
Message	Event message text.	STRING
EventTime_L	Timestamp (Date/Time format).	LINT
EventTime_D	Timestamp (Y,M,D,h,m,s,us).	DINT[7]

## raC\_UDT\_1756\_EN4TR\_MsgData

This is the IO-Device Message data which provide the command and status related information to the EN4TR.

The below table shows detailed information of members used in this UDT tag.

Member	Description	Data Type
AutoQualOption	Auto-qualification configuration option	INT
AutoQualState	Present state of auto-qualification enabling	INT
ProgCommands	Controls whether or not user programs can initiate redundancy commands	INT
PasswordScope	Controls whether or not redundancy configuration changes and/or user-initiated commands are password protected	INT
ModuleRedundancyState	Indicates the module redundancy state of this module	INT
ChassisRedundancyState	Indicates the chassis redundancy state of this chassis	INT
PartnerRedundancyState	Indicates the module redundancy state of the partner module, if one exists	INT

Member	Description	Data Type
PartnerChassisState	Indicates the chassis redundancy state of the partner chassis, if one exists	INT
QualificationInProgress	Indicates whether the chassis is currently in the qualification process	INT
NotApplied	NA	INT[12]

raC\_UDT\_LookupMember\_STR0082

Member	Description	Data Type
Code	Stores the value of device fault code	DINT
Desc	Stores the Messages related to fault code	STRING

Application Code Manager

Architectural Overview

Device libraries, as with most Application Code Libraries are divided into 2 logical groups: either Asset-Control Object or Device Implement Object.

Asset-Control Objects contain the asset definition of an object and any associated content which belongs to the asset. This includes controller tags, add-on instructions, data types, and attachments such as HMI content and documentation. These are found under the (RA-LIB) *Device > Asset-Control* folder and have names like *raC\_Dvc\_XXXX* where *XXXX* is the device name.

Device Implement Objects contain an instance of an asset-control object and provide all related configuration of the asset. The Device implement type is the application code (e.g. programming rung). This includes the required controller tags, programs, modules, and FactoryTalk View ME/SE symbols. These are found under the (RA-LIB) *Device > Device* folder and have names like *raC\_LD\_Dvc\_XXXX* where *XXXX* is the device name. LD stands for ladder logic.

## Using the Library

### Install the Library

### Download the Library

For the latest compatible software information and to download the Rockwell Automation Library, see the [Product Compatibility and Download Center](#).

Search “Device Library” or filter on Application Content to quickly find the library.

FIND DOWNLOADS ?

Device Library	All Categories	All Families	Q	COMPARE	DOWNLOADS
IO Device Library	Tested, documented and life-cycle managed library objects for Rockwell Automation 1756, 1769, 1734, 1794, 1738, 1732E, 1719, 509 (Application Content/Engineering Libraries)			Power Device Library 3.01.00	Download
IO-Link Device Library	Tested, documented and life-cycle managed IO-Link Master and Sensor Library Objects. (Application Content/Engineering Libraries)			IO Device Library 5.00	Download
Network Device Library	Tested, documented and life-cycle managed library objects for Stratix Switch and Device Level Ring DLR network objects. (Application Content/Engineering Libraries)			IO-Link Device Library 2.2.00	Download
Power Device Library	Tested, documented and life-cycle managed Power Device Library Objects for E300, ArmorStart, SMC50, PowerFlex, and Kinetix. (Application Content/Engineering Libraries)			Network Device Library 1.04.00	Download
Safety Device Library	Tested, documented and life-cycle managed library objects for Rockwell Automation Safety Instructions. (Application Content/Engineering Libraries)			Safety Device Library 1.01.00	Download

### Download & Install Studio 5000® Application Code Manager

Studio 5000® Application Code Manager is free to install from Rockwell Automation’s [Product Compatibility and Download Center](#).

Search “Application Code Manager” and select the item to download.

## FIND DOWNLOADS ?

The screenshot shows the 'FIND DOWNLOADS' interface. On the left, a search bar contains 'Application Code Manager'. Below it, a list of libraries is displayed under the heading '(Application Content/Engineering Libraries)'. The libraries listed are:

- Independent Cart Technology Libraries**: *ICT Libraries for iTRAK and MagneMotion including MagneMover LITE, QuickStick for Application Code Manager (ACM) (Application Content/Engineering Libraries)*
- Machine Builder Libraries**: *Tested, documented and life-cycle managed library objects and faceplates for use with Studio 5000 Application Code Manager (ACM) (Application Content/Engineering Libraries)*
- Process Library**: *RA Library of Process Objects, Application Templates, Application Code Manager Library, Tools & Utilities, and Integration with Endress+Hauser Devices (pre-5.00) (Process Solutions/PlantPAx)*
- Studio 5000 Application Code Manager**: *Engineering design productivity tool focused on rapid automation application development leveraging (ACM) (Software/Software)*

At the bottom of the search results, it says '5 items found' and 'MOVE SELECTIONS'. On the right, a sidebar shows the selected item: 'Studio 5000 Application Code Manager 4.02.00'. A download icon is highlighted in the sidebar. At the bottom of the sidebar, it says '1 selection' and 'COMPARE DOWNLOADS'.

Extract the downloaded .zip file by running the 4.xx.00-Studio5000\_ACM-DVD.exe executable file. This will extract a new folder containing a *Setup.exe* file which can be run to begin product installation.

Follow the prompts from the splash screen until installation is complete. Note that a SQL server is required for Application Code Manager. SQL Server Express is offered for free and is included in the Application Code Manager installer.

## Register Libraries in Studio 5000 Application Code Manager

It is recommended that you use Studio 5000® Application Code Manager to add I/O modules to a project and pre-configure FactoryTalk® View ME/SE faceplate HMI objects. To use the library in Application Code Manager you must first register the libraries.

The *Lite* version of Studio 5000® Application Code Manager is free of charge and can be downloaded from the Product Compatibility and Download Centre. None of the features included in the Standard (paid) version are required to use Device Object Libraries.

### Register Complete Library Automatically

To automatically register the entire library, find and run the *setup.cmd* file in the root folder of the library files. You will see a windows console appear as the

script runs. When it is complete it will display “Deployment Complete”. Enter “Y” to exist the console.

```

C:\WINDOWS\system32\cmd.exe

-- Be patient, the duration of this process varies based on library size
-- Script Complete

:: -----
:: Registering Libraries
:: -----

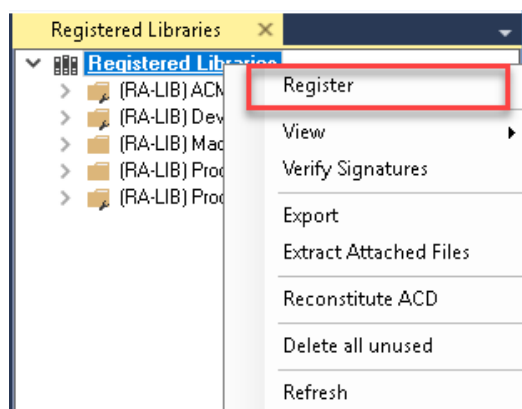

-- Be patient, the duration of this process varies based on library size
-- Registration Complete

-----
Deployment Complete
-----
Exit deployment? [Y]?

```

### Register Individual Library Objects Manually

As an alternative to registering the entire library using the setup.cmd script, you can manually register one or multiple library objects in Studio 5000® Application Code Manager. Open up Application Code Manager and view the Registered Libraries panel on the right. Right-click on *Registered Libraries* and select *Register*. Browse to the *ApplicationCodeManagerLibraries* folder within the library files and select any HSL4 files that you would like to register. Note you may select more than one at a time. Once you complete registering the desired objects they will be shown under the *(RA-LIB) Device* solution folder.

## Using Studio 5000 View Designer

### Using View Designer Project Files

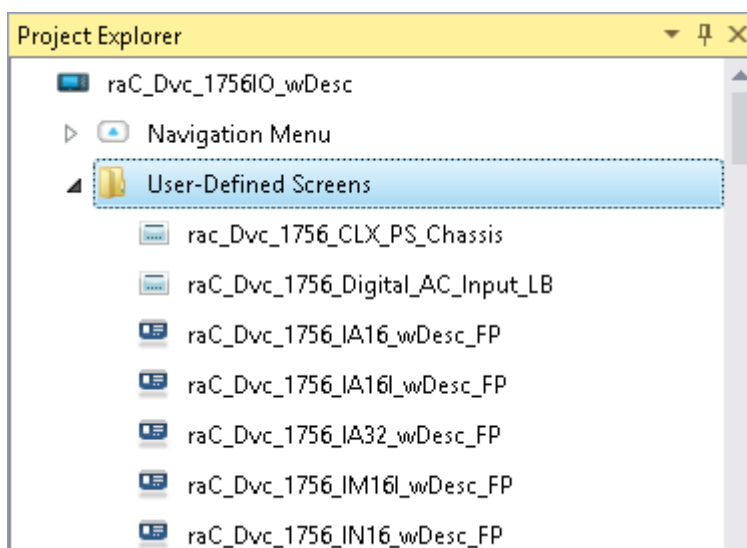

Studio 5000 View Designer® may be used for HMI development for PanelView™ 5000 applications. Open up your Studio 5000 View Designer® project alongside a second application instance running the required VSD file in the library folder *HMI - ViewDesigner - vpd*.

In the Library there is a folder named *Videos* which contains many How-To Import Videos which walk step-by-step through each process. You can refer to the following videos for this section: "How\_To\_Import\_and\_Configure\_IO\_Objects\_into\_View\_Designer"

You will notice there are multiple screens available under the *User-Defined Screens* folder:

- *raC\_Dvc\_XXXX\_Type*: This has the graphic symbol launch buttons for the faceplate where *XXXX* is the I/O family and *Type* is the module type (e.g. *AC\_Input*).
- *raC\_Dvc\_XXXX\_wDesc\_FP*: This is a faceplate pop-up screen.

To include these files in your project, perform the following steps:

- Copy the entire faceplate *\_wDesc\_FP* screen from the supplied VSD project to your project application.
- Open the graphic symbols screen and copy the desired graphic symbol and paste it into a screen in your project application.

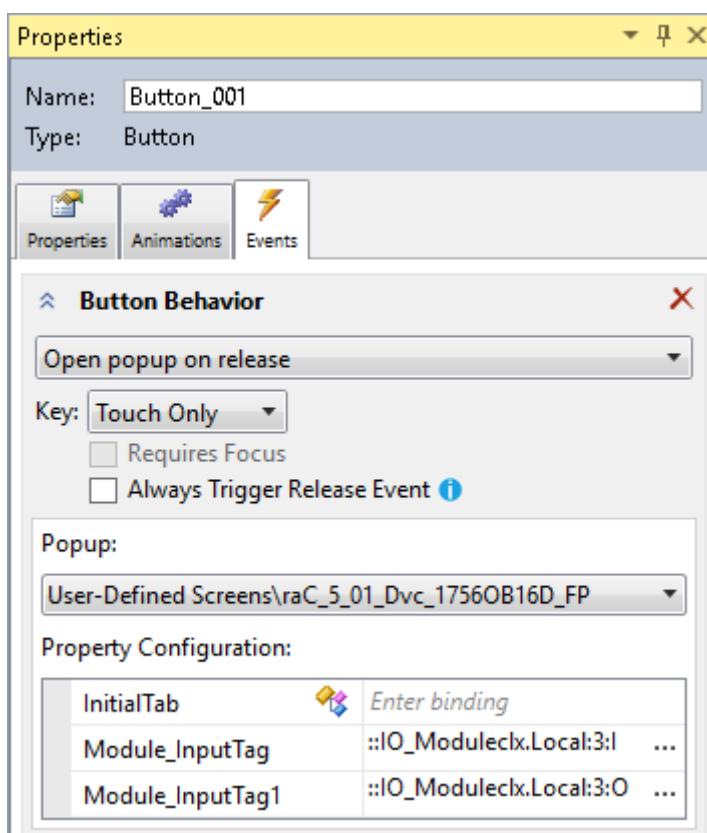

Button

## Configuring View Designer Objects

To link the launch button to the faceplate, highlight the button and view the *Events* tab of within the *Properties* pane. Set an Event to *Open popup on release* with the following settings:

- Key: Touch Only
- Popup: Select desired faceplate screen
- Module\_InputTag: Browse to Input (:I) tag of the I/O module in your controller file. This is required for all module types.
- Module\_OutputTag: Browse to Output (:O) tag of the I/O module in your controller file. This is only defined and required for Output modules and some specialty modules.

## Using FactoryTalk® View Studio

### Import HMI Tags

An HMI Tag file *FTViewStudio\_IOLibrary\_Tags\_5\_00.CSV* is provided in the root of the library folder for use with FactoryTalk® View ME and SE. This is required to support faceplate navigation between tabs and pages where application.

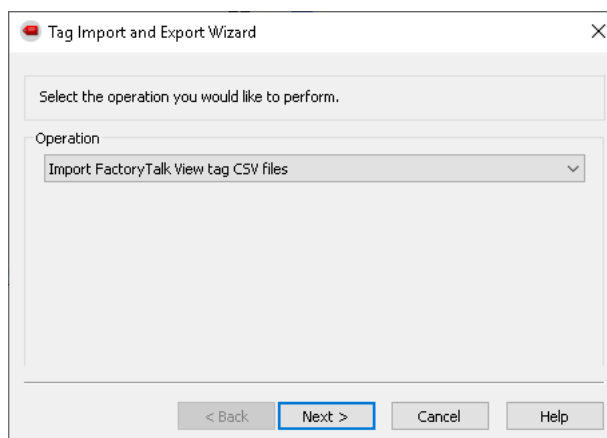

In the Library there is a folder named *Videos* which contains many How-To Import Videos which walk step-by-step through each process. You can refer to the following videos for this section:

"How\_To\_Import\_and\_Configure\_IO\_Objects\_in\_FTVIEWME"

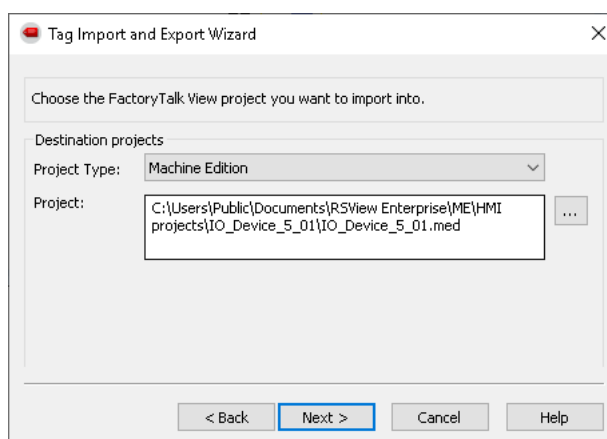

"How\_To\_Import\_and\_Configure\_IO\_Objects\_in\_FTVIEWSE"

To import the tag file, in FactoryTalk® View Studio go to *Tools > Tag Import and Export Wizard...*

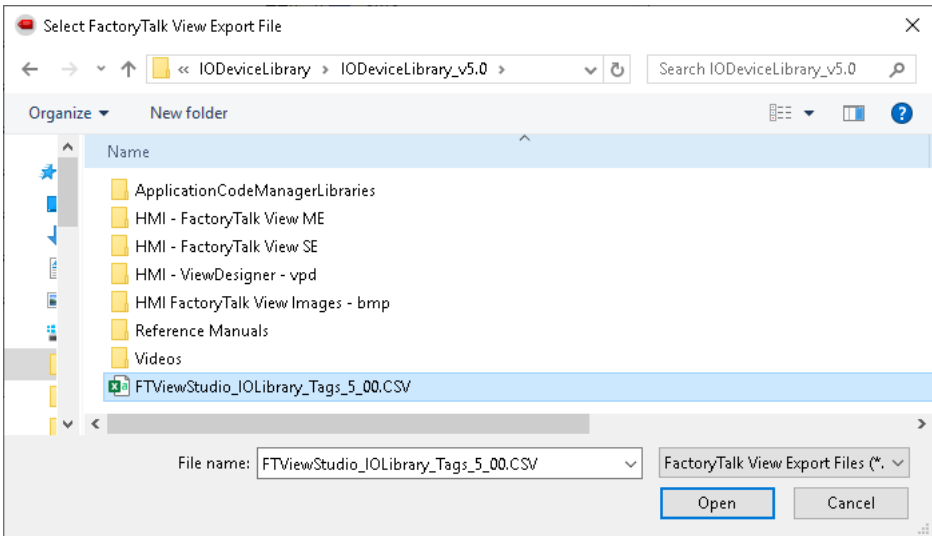

Set the *Operation* to *Import FactoryTalk® View tag CSV files*.

Choose the appropriate *Project Type* (Machine Edition or Site Edition). Browse for the desired project *.MED* file.

Browse for the *.CSV* file in the root of the *IODeviceLibrary\_v5.xx* library folder.

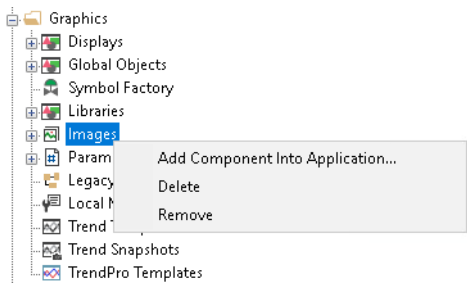

You may choose to Skip existing or Update existing tags. If this has not been done previously the choice should not make a difference.

The following tags are now imported:

Tag Name	Type	Description
IOLibNavTag	Analog	Navigation tag for IO Module Faceplates
IOLibRevTag	Analog	Revision tag for IO Module Faceplates

## Import FactoryTalk® View Visualization Files

There are several components to import for the visualization files. You import files from the downloaded Rockwell Automation library files via FactoryTalk® View ME or FactoryTalk® View SE. The workflow is the same for both FactoryTalk® View ME and SE. All image and display items can be imported either by right-clicking in FactoryTalk® View on the Graphic sub-folder (e.g. Displays, Global Objects, Images) or simply dragging and dropping the files into the application.

Import files in this order:

1. Import HMI Images files.

Select all the images in the \HMI FactoryTalk® View Images - png folder and Open.

2. Import Global Object files

Select the global object (.ggfx) files from the \HMI - FactoryTalk® View ME\Global Objects - ggfx or \HMI - FactoryTalk® View SE\Global Objects - ggfx folder

3. Import HMI Faceplates

Select the faceplate (.gfx) files from the \HMI - FactoryTalk® View ME\Displays - gfx or \HMI - FactoryTalk® View SE\Displays - gfx folder

## Configuring FactoryTalk® View Objects

Once the files have been imported into the FactoryTalk® View Studio project, you can begin using them in your application. Open the *Global Display (raC-5-ME) Graphic Symbols - IO Device*. Copy the desired launch button style and paste it into a display in your application where you would like to open the faceplate. For more information on graphic symbols, refer to the Graphic Symbols section of the specific device type chapter in this manual.

To configure the graphic symbol launch button, right-click and select *Global Object Parameter Values*. You can browse for the tag in your controller project by clicking '...' or manually type them in. These parameters may vary depending on the graphic symbol used, please refer to the Graphic Symbols section of the device type for detailed information. Generally Global Object Parameters for the IO Device Library are defined as follows:

Name/#	Description	Mandatory
#102	Faceplate Display Name e.g. (raC-5-00-ME) raC_Dvc_XXXX_XXXX-Faceplate	Yes
#103	IO Module Input Tag .e.g. {[Topic Name]Local:1:I}	Yes
#104	IO Module Output Tag .e.g. {[Topic Name]Local:1:O}	Output Modules Only
#106	Custom Button Label. Leave blank to use InputTag.@Description	No
#111	IO Class: Blank=Standard; 1=Safety	No
#120	Display's left position (e.g. 100)	No
#121	Display's top position (e.g. 100)	No

Global Object Parameter Values

	Name	Value	Tag	Description
1	#102	(raC-5_01-ME) raC_Dvc_1756_OB16D-Faceplate	***	Faceplate Display Name e.g. (raC-5_00-ME) raC_Dvc_XXXX_XXXX-Faceplate
2	#103	{::[CLX]R1756:5:I}	***	IO Module Input Tag e.g. {::[Topic Name]Local:1:I}
3	#104	{::[CLX]R1756:5:O}	***	IO Module Output Tag e.g. {::[Topic Name]Local:1:O}
4	#106	DO	***	Custom button label. Leave blank to use InputTag.@Description
5	#120		***	Display's left position (e.g. 100)
6	#121		***	Display's top position (e.g. 100)

These Global Object Parameter Values are automatically configured when you use Studio 5000® Application Code Manager to design and configure your project. Refer to [Using Studio 5000® Application Code Manager](#) for more information.

## Importing Logic into Studio 5000® Projects

There are multiple methods to using the logic in a Studio 5000 application. For projects that are being developed from scratch using Application Code Manager along with other Application Code Libraries such as the PlantPAx Process Objects Library or the Machine Builder Library, you can continue to use the Device Object Libraries in Application Code Manager. For existing applications where devices are being added, it is recommended to use the Studio 5000 Plug-In “Import Library Objects” Wizard. Alternatively you can import the RUNG.L5X files into your program and configure them manually.

In the Library there is a folder named *Videos* which contains many How-To and Operational Overview Videos which walk step-by-step through each process. You can refer to the following videos for this section:

“How\_To\_Import\_and\_Configure\_IO\_Device\_Objects\_in\_LogixDesigner.mp4”

It is not recommended to simply import the AOI.L5X files and attempt to build your own logic rung. Doing so will increase the likelihood of configuration errors and likely miss logic that is required outside of the Add-On Instruction.

AOI files should only be imported when updating an existing application from a previous version of a Device Object Library to a newer one.

Below is a table to capture recommendations on when to use which tool or workflow when importing and configuring device objects.

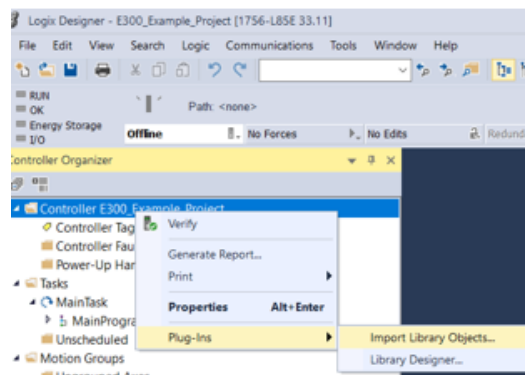

Tool/Workflow	Description of when to use	Software Requirements
Application Code Manager (full application)	Project is developed from scratch using Application Code Manager along with PlantPAx or Machine Builder libraries.	Studio 5000 Logix Designer® Studio 5000® Application Code Manager (Lite)

Tool/Workflow	Description of when to use	Software Requirements
Studio 5000 Plug-In "Import Library Objects" Wizard	Application Code Manager is installed but not required for the entire project. Application has already been developed but some Device Objects need to be added.	Studio 5000 Logix Designer® Studio 5000® Application Code Manager (Lite)
Import RUNG.L5X File	Application Code Manager is not installed. Application has already been developed but some Device Objects need to be added. Familiar with rung import workflow.	Studio 5000 Logix Designer®
Import AOI.L5X File	Updating existing application that contains an older version of a Device Object AOI.	Studio 5000 Logix Designer®

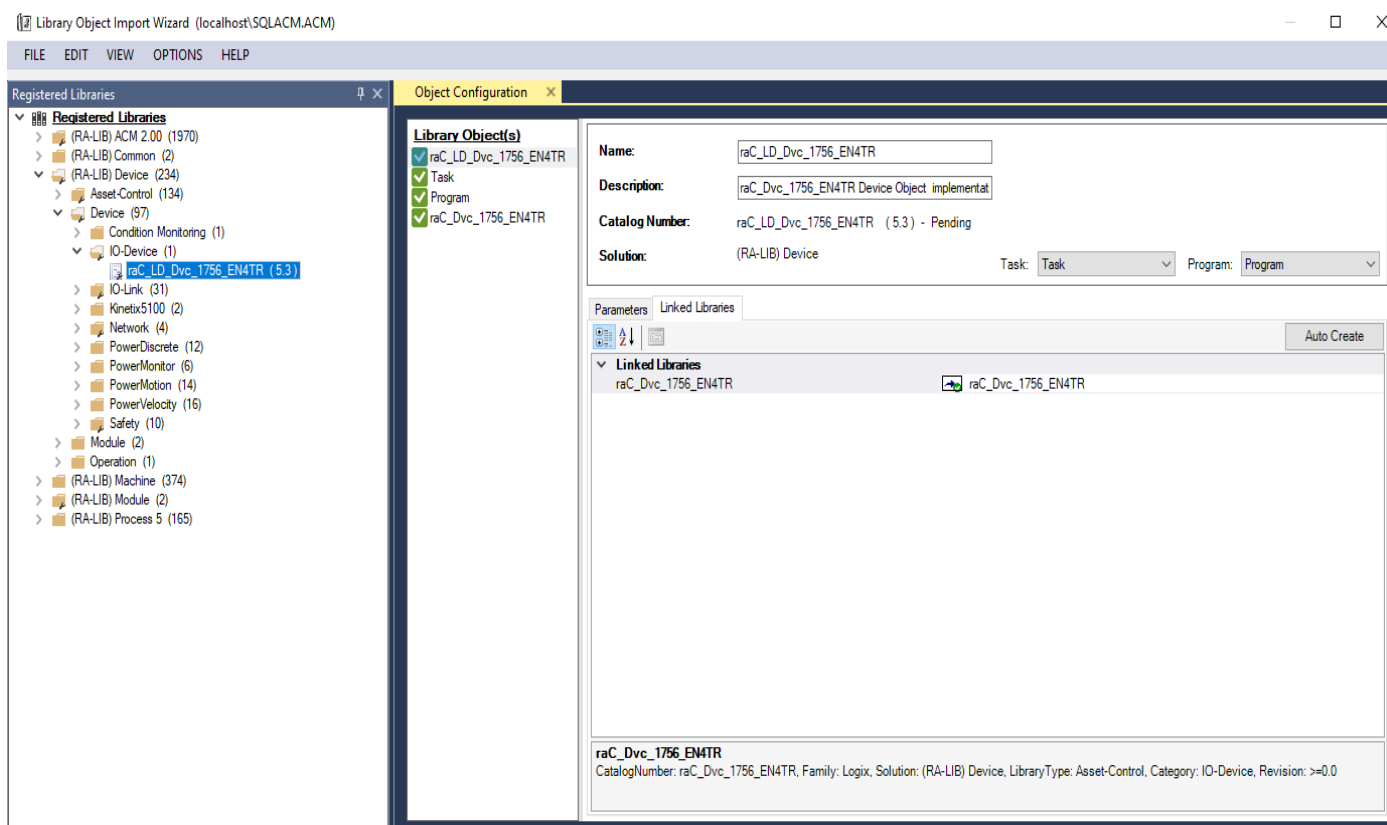

## Import Library Objects Wizard

The most simple way to import a Device Object into an existing application is to use the Studio 5000 Plug-In "Import Library Objects" wizard. This plug-in requires Application Code Manager to be installed but does not require it to be open or have a project created.

Right click on an item (e.g. Controller, Task, Program, etc) in the Controller Organizer and select *Plug-Ins > Import Library Objects...*

This will launch a small wizard version of Application Code Manager inside of your Studio 5000 Logix Designer® Project. In the Registered Libraries panel on the left, find your desired object under *Registered Libraries > (RA-LIB) Device > Device* and drag it into the Library Object(s) list in the Object Configuration Tab.

Perform the following configuration:

- Enter a **name** and **description**. Maximum name length can be 22 characters. Note that other parameters such as the RoutineName, TagName, etc will auto-complete based on these fields.
- Assign the **Task** and **Program**.
- The **ModuleReference** represents the IO-Device Module to which the IO-device is connected.
- Assign the **ModuleName** by typing or browsing to the instance of the IO-Device Module in the controller project (e.g. 1756-EN4TR)
- The HMI Configuration options are not used in the Plug-In Wizard and can be ignored.
- Click next or click on the *Linked Libraries* tab. Click the *Auto Create* button to automatically create all of the required linked libraries.

You can manually create new linked libraries or point to existing linked libraries if necessary. You may need to do this if you would like to use an older version of library objects when multiple versions are installed in Application Code Manager.

- On the following screen you can select the desired Merge Actions. Generally these can be left with the default actions.
  - Add: used when AOIs don't previously exist in application
  - Overwrite: usually preferred. Used when AOIs previously exist but may or may not be the same revision.
  - Use Existing: used when AOIs previously exist in the application and you do not wish to overwrite the existing items.
- Click next and you can now see any new logic and modules that will be created.
- Click Finish to complete the import.

## Import Rung Logic

An Add-On Instruction is defined once in each controller project, and can be instantiated multiple times in your application code. To use pre-engineered logic, import each desired RUNG.L5X file into a controller project.

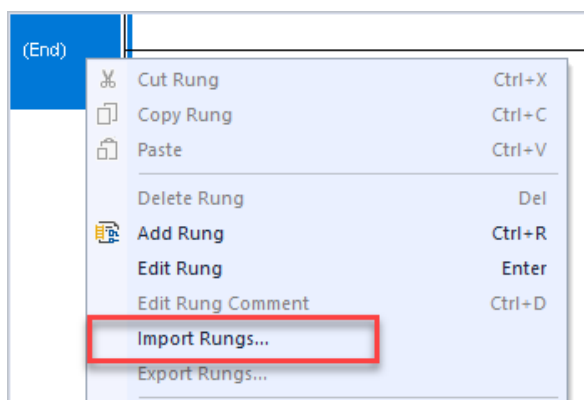

1. In the Studio 5000 Logix Designer® application, open a new or existing project.

---

**IMPORTANT** Add-On Instruction definitions can be imported, but not updated, online.

---

2. Choose or create a new ladder routine to open. Right-click in the routine ladder and choose Import Rungs...

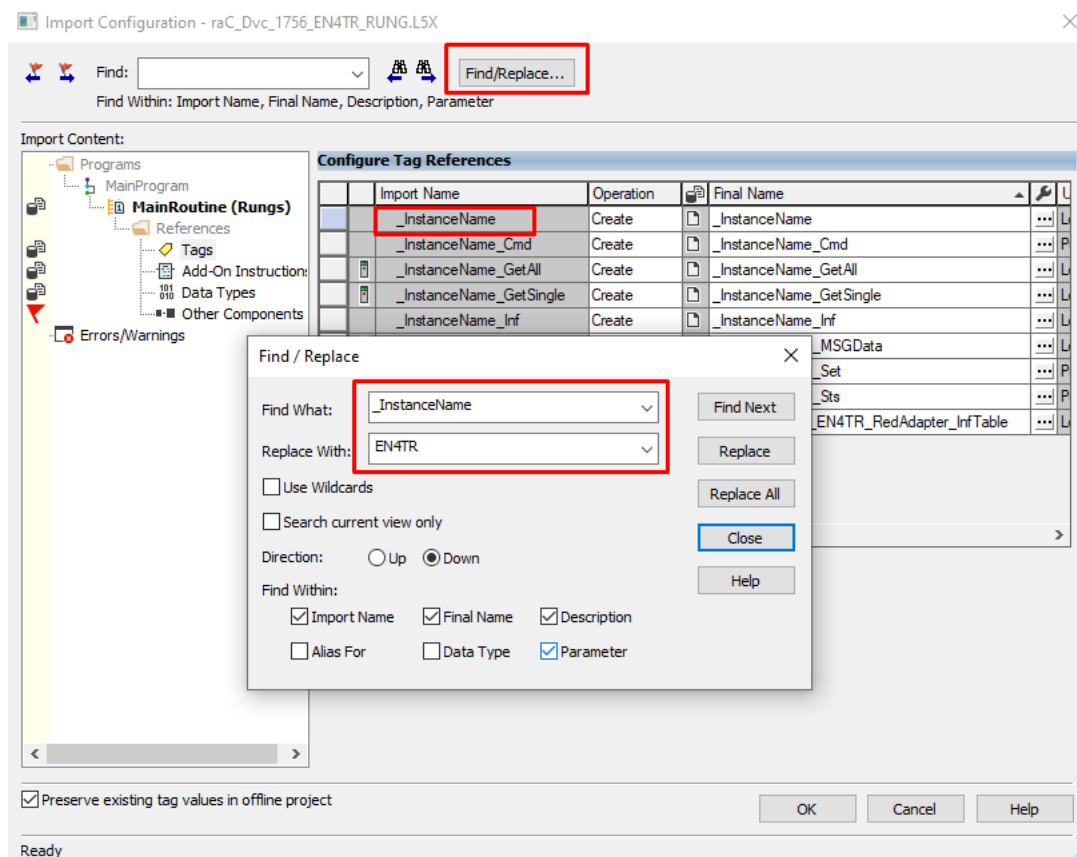

3. Select the desired RUNG and Select Import. The file will have a name like *raC\_Dvc\_1756\_EN4TR\_RUNG.L5X*.

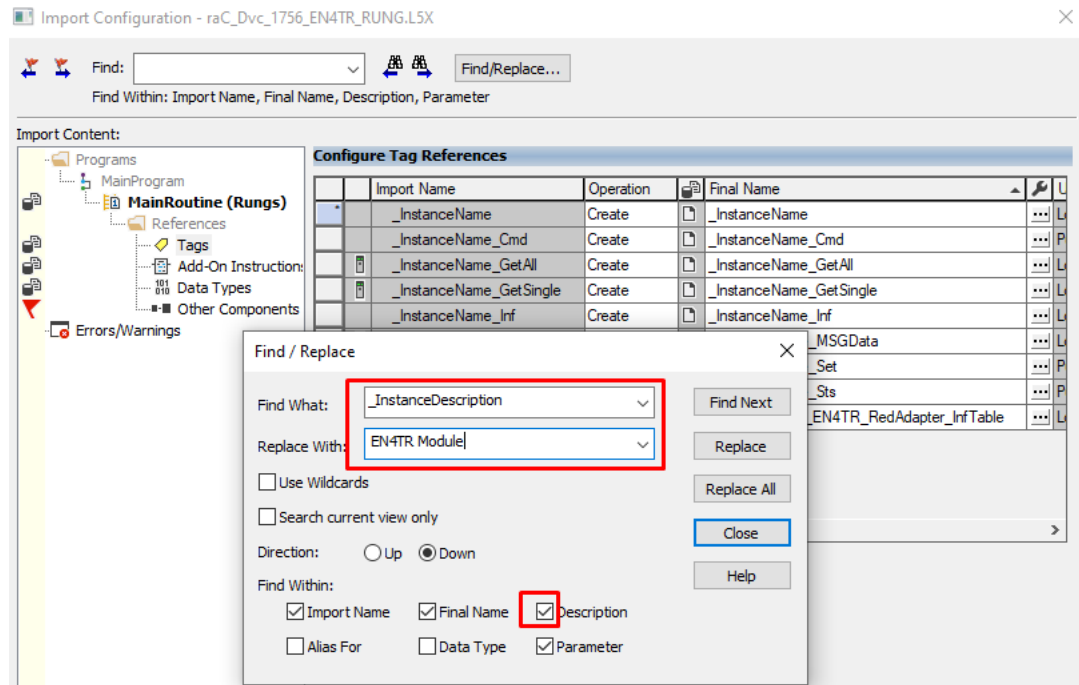

Both "RUNG" and "AOI" .L5X files are provided. Import the RUNG file to get all required additional tags, data types, and message configurations.

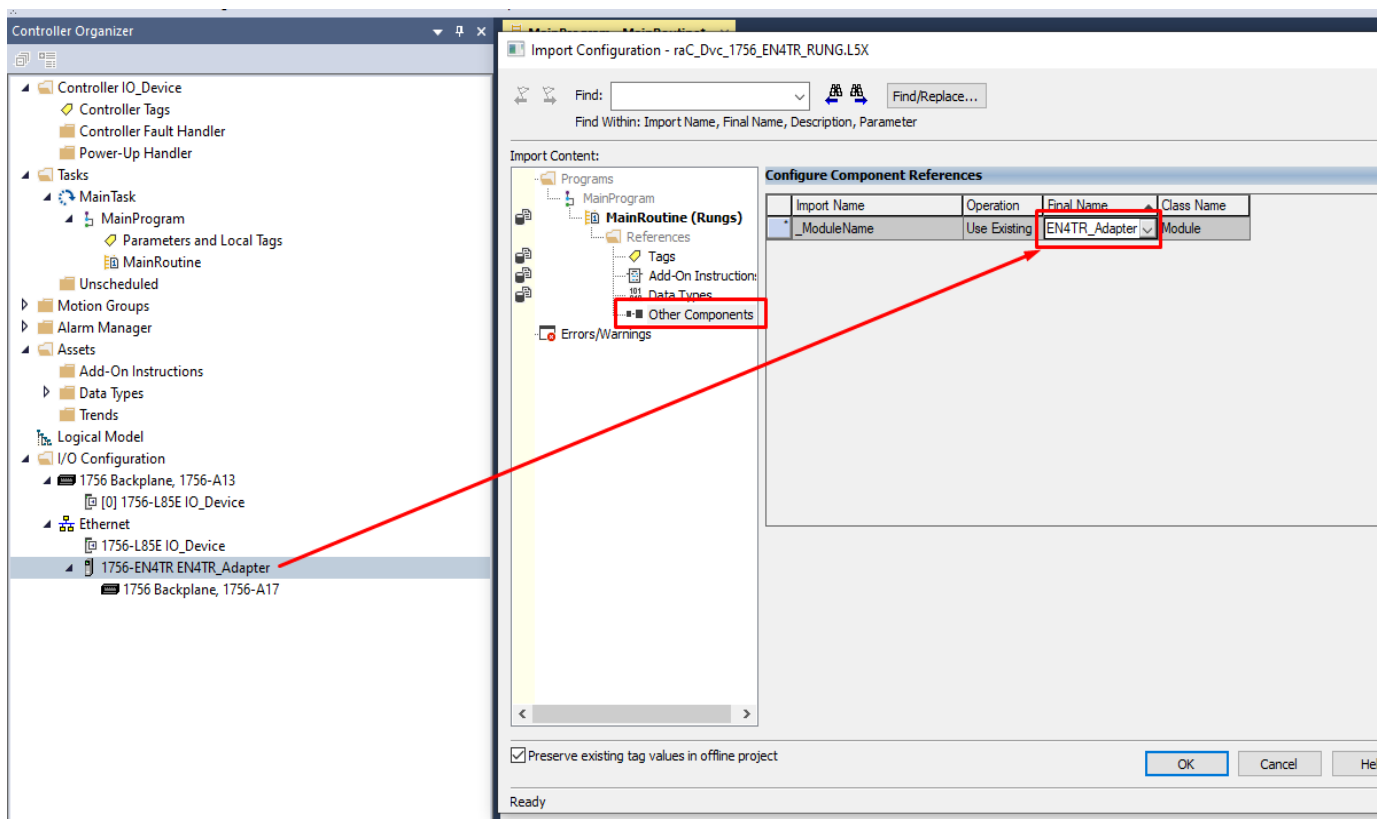

- An *Import Configuration* dialogue window will open and display generic Import names which include “\_InstanceName”. Click the *Find/Replace...* button and replace all instances of “\_InstanceName” with your desired device name (e.g. “EN4TR”).

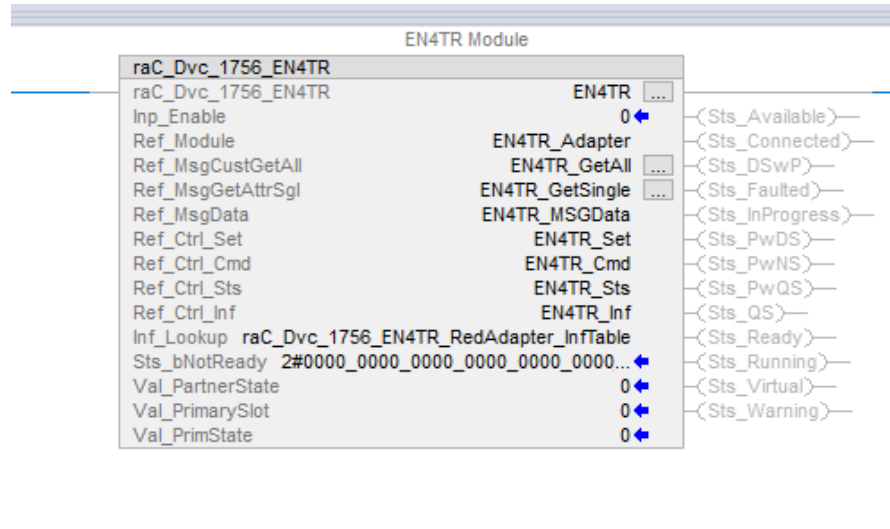

- Click the *Find/Replace...* button and replace of “Instance\_Description” with your desired description e.g. “EN4TR Module”).

6. Click the *Other Components...* and select of “\_ModuleName” with your desired Module Name e.g. “EN4TR\_Adapter”).

- Click "OK" on the "Import Configuration dialog box". The rung will now be imported into your ladder routine.

## Module Definition

## Module Configuration

The specified Configuration is necessary when user manually creating Studio 5000 Project. However if Application Code Manager is used for Project construction, these configurations are automatically managed. According to the faceplate user are required to adjust module settings. Refer to the table below for necessary configurations across all series.

### 1715 High- Availability I/O Configuration

FactoryTalk View xx Faceplate	Connection	Input / Output Data	Data Format	Redundant	SIL2 safety	HART Enabled

## Library Upgrades

## Add-On Instruction Upgrades

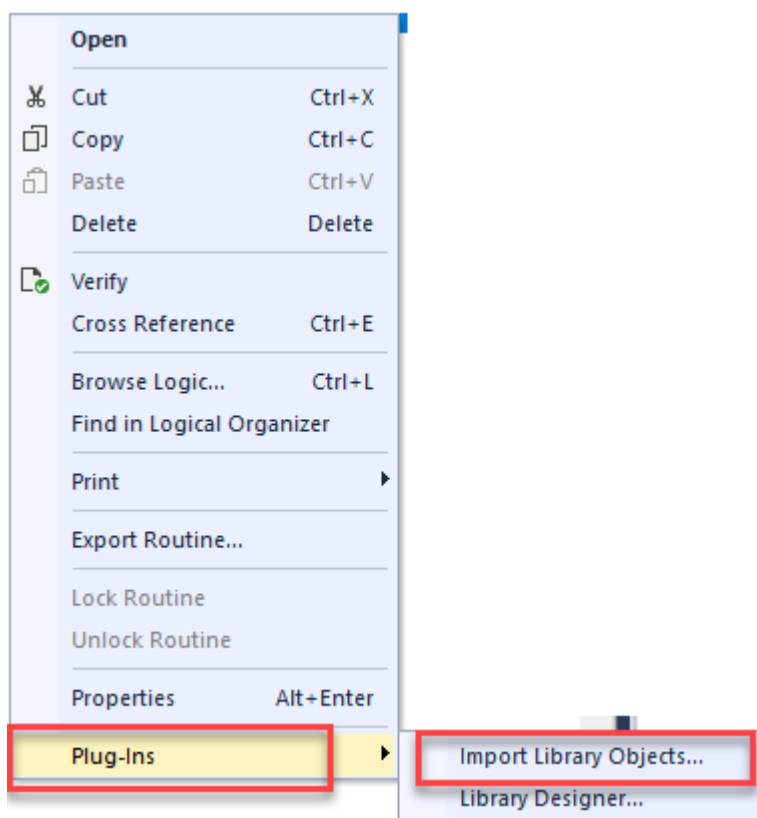

There are two methods to upgrading existing device object add-on instructions in a project. You can do this either by using the Studio 5000 Plug-In *Import Library Objects* Wizard or by importing individual add-on instruction AOI.L5X files. Both methods are described in the following sections.

Note that all updates to Add-On Instructions must be done with Studio 5000 Logix Designer in OFFLINE mode and a download to the controller is required.

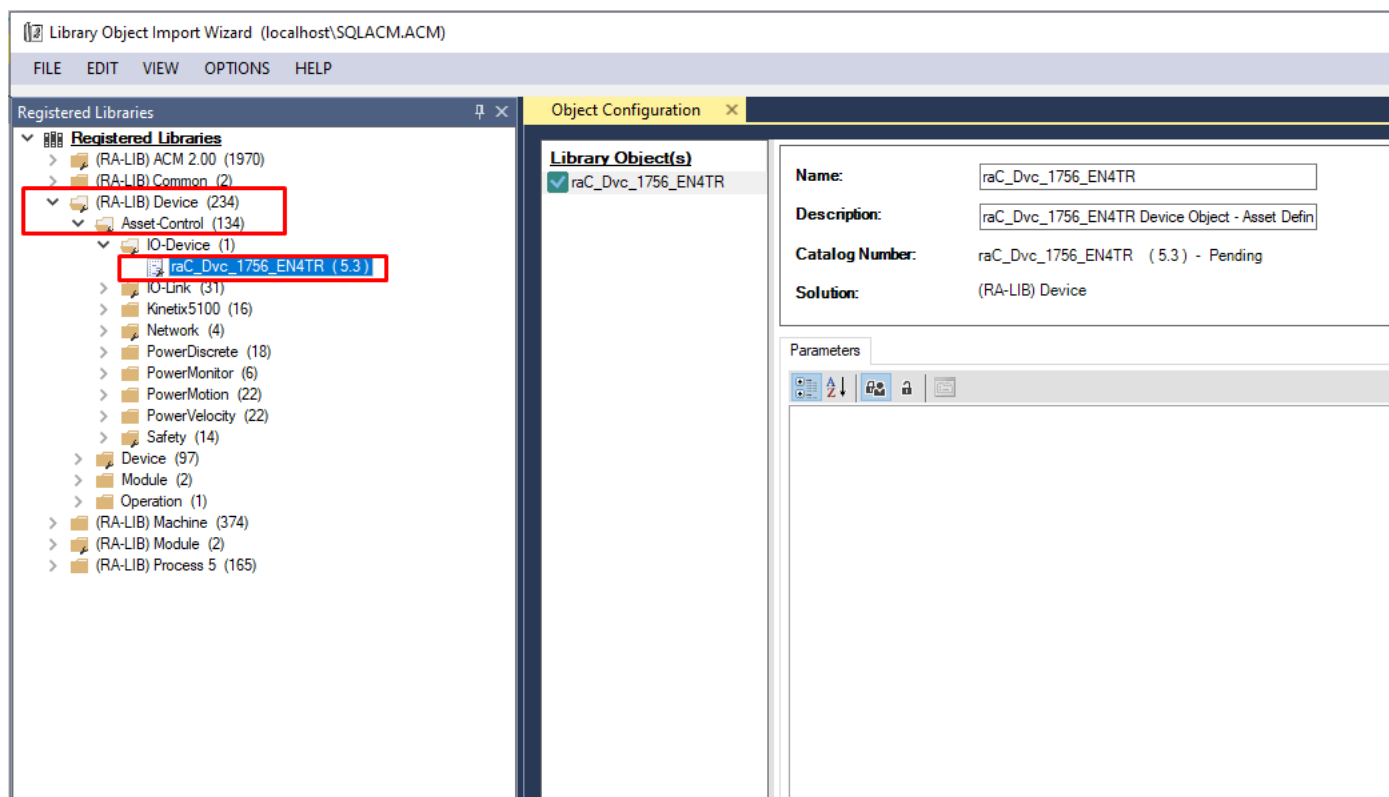

### *Upgrades Using Studio 5000 Plug-In to Import Library Objects*

If Studio 5000 Application Code Manager is installed, you can use the Studio 5000 Plug-In *Import Library Objects* Wizard to update existing Add-On Instructions. For complete information on Studio 5000 Application Code Manager, refer to the section [Using Application Code Manager](#).

Right-click in your controller organizer or within a routine to access *Plug-Ins > Import Library Objects*.

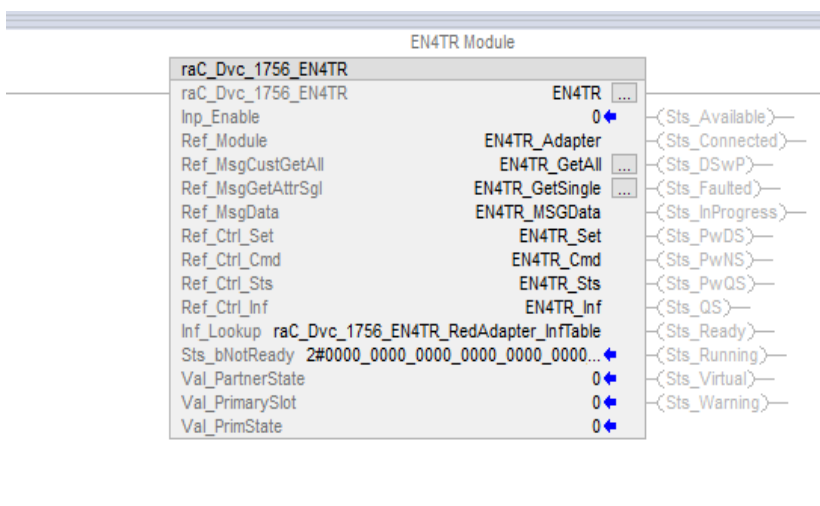

The *Library Object Import Wizard* dialogue window will open. Under *Registered Libraries* expand (RA-LIB) Device > Asset-Control and find the desired object and version. Drag the object into the *Object Configuration* window on the right.

In the *Merge Actions* window, select the *Action* for the *AddOnIntructionDefinition* to *Overwrite*. This will update any existing instance of the object to the newer version. You may also choose to overwrite any other Data Types or Tags. Review the release notes of the latest library release to understand what may be impacted. Click next and finish to complete the process.

Merge Actions		
Category	Name	Action
<b>AddOnIntructionDefinition</b>		
AddOnIntructionDefinition	raC_Dvc_1756_EN4TR	✓ Overwrite
<b>Data Type</b>		
Data Type	raC_UDT_1756_EN4TR_MsgData	✓ Overwrite
Data Type	raC_UDT_Event	✓ Overwrite
Data Type	raC_UDT_ItfAD_IODevice_Cmd	✓ Overwrite
Data Type	raC_UDT_ItfAD_IODevice_Inf	✓ Overwrite
Data Type	raC_UDT_ItfAD_IODevice_Set	✓ Overwrite
Data Type	raC_UDT_ItfAD_IODevice_Sts	✓ Overwrite
Data Type	raC_UDT_LookupMember_STR0082	✓ Overwrite
Data Type	STR0016	✓ Overwrite
Data Type	STR0032	✓ Overwrite

- After Importing the AOI. Make sure the controller is error-free and

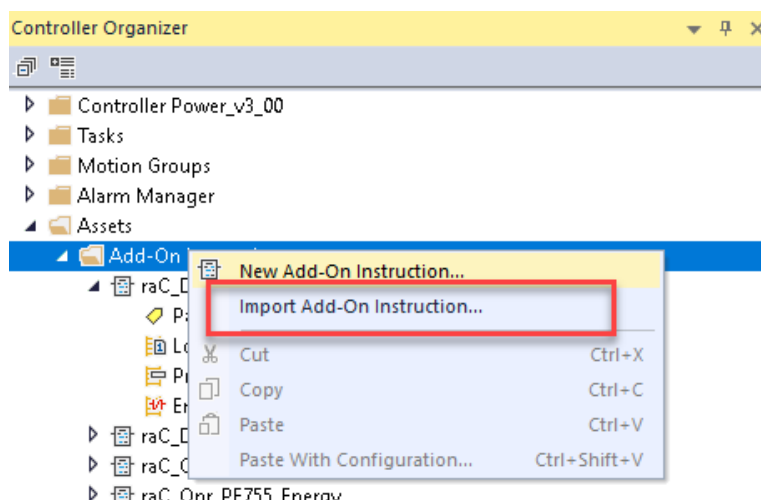

download it to the controller.

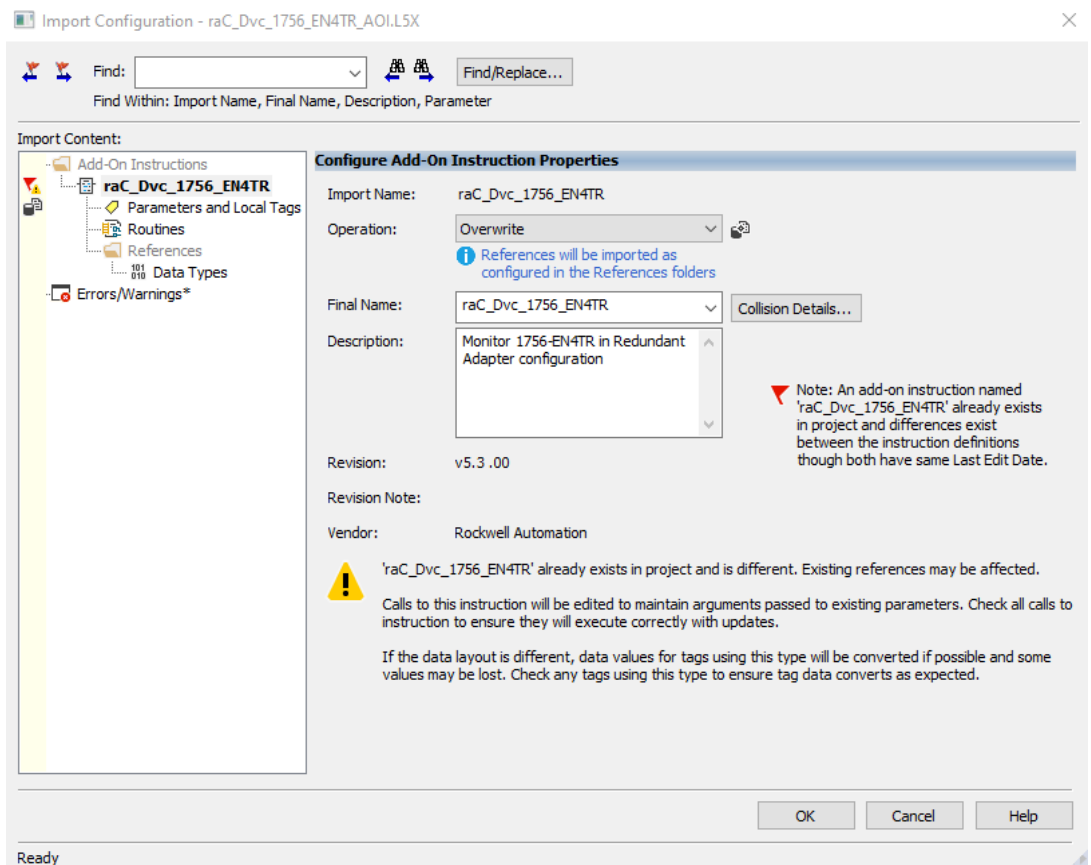

### Upgrades by Importing AOI.L5X Files

To upgrade or migrate a project that uses a previous library version to a newer one, the add-on instruction L5X files are supplied. To perform an upgrade to an object perform the following steps:

- Open the controller file. Note changes must be done offline.
- In the *Controller Organizer* pane right-click on *Assets > Add-On Instructions* and select *Import Add-On Instruction*. Navigate to the AOI.L5X file in the *Studio 5000 Logix Designer Files - L5X* and Open.

- You will be prompted that there is an existing version of the instruction that is different. Choose *Overwrite* as the operation and select OK once you have read and understood the warnings. Your existing logic will be updated with the new add-on instruction. Verify that your code compiles and test adequately.

After Importing the AOI. The AOI references in the routine are affected and need to reconfigure it.

## FactoryTalk® View Upgrades

To upgrade a device object in a FactoryTalk® View ME/SE application, simply import the new faceplate.gfx display file into the application. If any global objects or images have been added or modified, you may need to import these as well. Any unused displays from previous versions may be removed or deleted from the application.

## Studio 5000 View Designer® Upgrades

To upgrade a device object in a Studio 5000 View Designer® application, simply import the open the new View Designer.vpd file and copy the raC\_Dvc\_XXXXX\_wDesc\_FP pop-up screen into the existing application. Find any graphic symbol launch buttons in the application that open the faceplate, and update the Action to open the new pop-up screen. Any unused pop-up screens from previous versions may be removed or deleted from the application.

## Using Application Code Manager

### Overview of Application Code Manager

Studio 5000® Application Code Manager is a tool that enables more efficient project development with libraries of reusable code. Application Code Manager creates modular objects with customizable configuration parameters using the reusable content. Application Code Manager can also create the associated visualization, historical and alarming elements for a project.

Studio 5000® Application Code Manager can be easily used along with Rockwell Automation® application code libraries such as the PlantPax® Process Objects Library, Machine Builder Library, and Device Object Libraries. For more information on Studio 5000® Application Code Manager, refer to the [Application Code Manager User Manual](#).

### Creating a New Project

Begin by opening Application Code Manager.

Note: the last project (if any) is opened by default; otherwise a blank screen is displayed.

Create a New Project or open an existing project. Navigate to *File > New > Project*.

Select the desired project type (e.g. (RA-LIB) ACM 2.00 Project - Basic\_Project) and fill in the *Name* and *Description*.

To add a new controller to a project, in the *Controller Preview* window, right-click on *Controllers* and select *Add New...*

Select the desired controller type (e.g. *ControlLogix\_Controller*, *GuardLogix\_Controller*, *CompactLogix\_Controller*, etc). Enter a *Name* and *Description* for the controller. Select the appropriate Chassis and Processor configurations.

You can also configure the HMI *AreaPath* and/or *AreaPathME* parameters which will be referenced if you use Application Code Manager to generate FactoryTalk® View ME/SE displays with graphic symbol launch buttons.

Object Configuration Wizard

**Name:** SafetyDevice\_v1\_02

**Description:** GuardLogix Safety Controller

**Catalog Number:** GuardLogix\_Controller (2.1) - Published

**Solution:** (RA-LIB) ACM 2.00

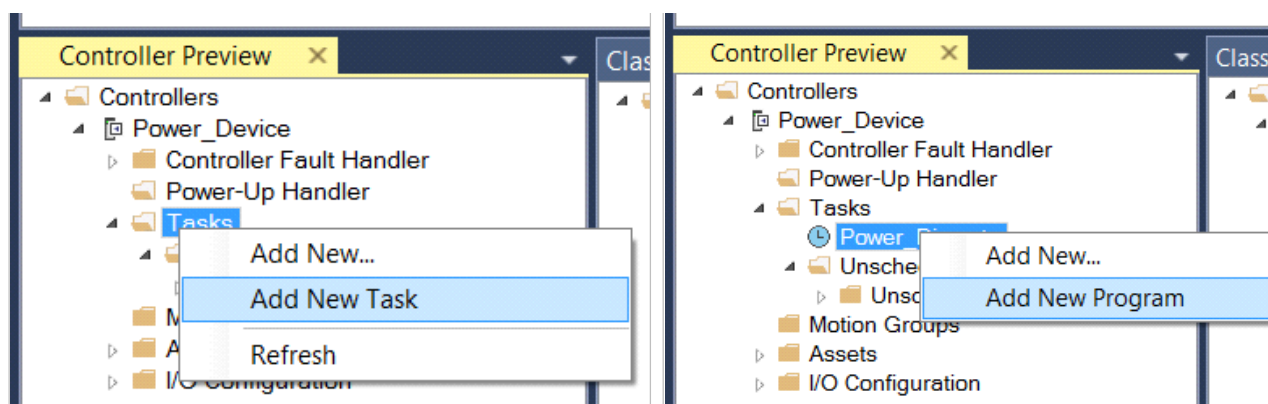

**Parameters**

01 - Controller	
ChassisName	Local
Slot	0
Size	4
SoftwareRevision	33
ProcessorType	1756-L84ES
02 - HMI	
AreaPath	/Area:[shortcut]
AreaPathME	[shortcut]
03 - Historian	
HistorianPath	Application/Area:RSLink Enterprise:[shortcut]
FTLDInterfaceNo	1
Motion	
ConfigureMotion	False
Port Configuration	
EthernetPort1_Enabled	True
Safety Configuration	
Safety_Level	SIL2/PLd

Safety_ConfigureSafetyIOAlways	False
Time Synchronization	
TimeSync_Priority1	128
TimeSync_Priority2	128

**Size**  
This is the Chassis size of this Controller

Cancel << Previous Next >> Finish

You can now add in any desired tasks and programs to your controller. Right-Click on the *Tasks* folder underneath your controller in the *Controller Preview* and *Add New Task*. Similarly, right-click on any Task and select *Add New Program*. Complete the desired parameters for Tasks and Programs such as name, type, period, etc.

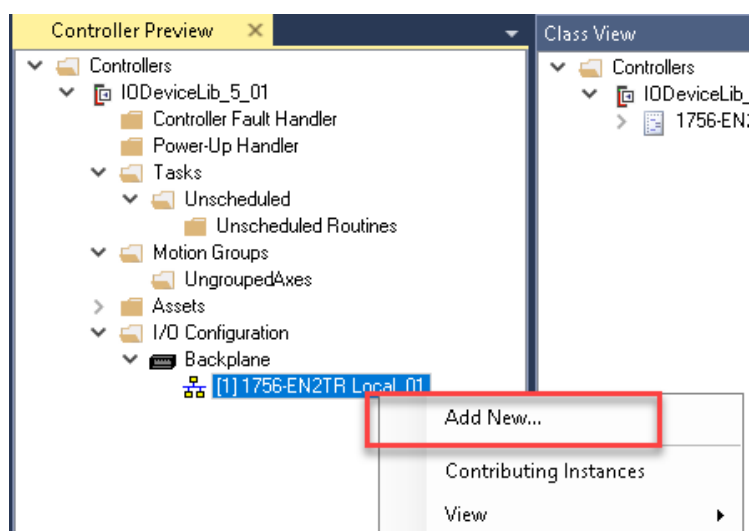

## Adding & Configuring Device Objects

Prior to adding in any Device Objects, ensure you have registered the library in Application Code Manager. Refer to [Registering Libraries in Studio 5000® Application Code Manager](#) for details.

### Adding Communication Modules

If not already done you may need to add Communication modules to your Controller I/O Configuration. This will allow you add additional I/O systems and modules.

In the *Controller Preview* pane you find the *I/O Configuration* folder underneath your controller. Right-click the desired location such as the backplane or an existing Ethernet network and select *Add New*.

You may choose to click on the *Category* filter to easily sort and find *Communication* modules. Selected the desired Communication module and click *Next*.

Object Configuration Wizard

Select a library

Filter:  ☐ Show All Revisions ☒ Show All

Solution	LibraryType	Category	CatalogNumber	Family	ContentType
⊞ Analog (4 items)					
⊞ Communication (23 items)					
(RA-LIB) ACM 2.00	Module	Communication	1719-AENTR/A ( 5.0 )	1719	Task
(RA-LIB) ACM 2.00	Module	Communication	1734-AENTR/B ( 2.0 )	1734	Task
(RA-LIB) ACM 2.00	Module	Communication	1734-AENTR/B ( 2.0 )	1734	Task

**Library Description:**  
1756 10/100 Mbps Ethernet Bridge, 2-Port, Twisted-Pair Media

Cancel << Previous Next >>

For new I/O chassis assign a unique *ChassisName*. You can also assign a unique *IP Address* and other parameters like *Size*, *RPI*, *Unnicast* and *EnableTimeSync*. Click *Finish* to complete.

Object Configuration Wizard

**Name:** ControlLogix\_1756\_ID\_00

**Description:** 1756 10/100 Mbps Ethernet Bridge, 2-Port, Twisted-

**Catalog Number:** 1756-EN2TR ( 2.1 ) - Published

**Solution:** (RA-LIB) ACM 2.00

Parameters

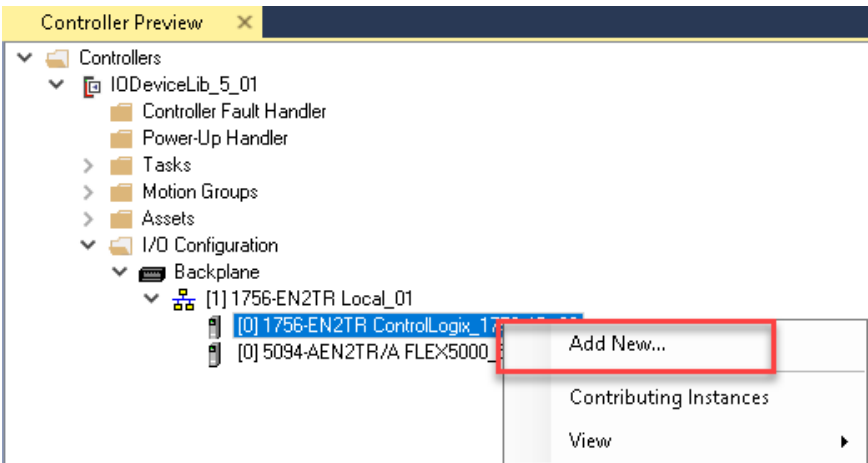

EnableTimeSync False

Module Configuration

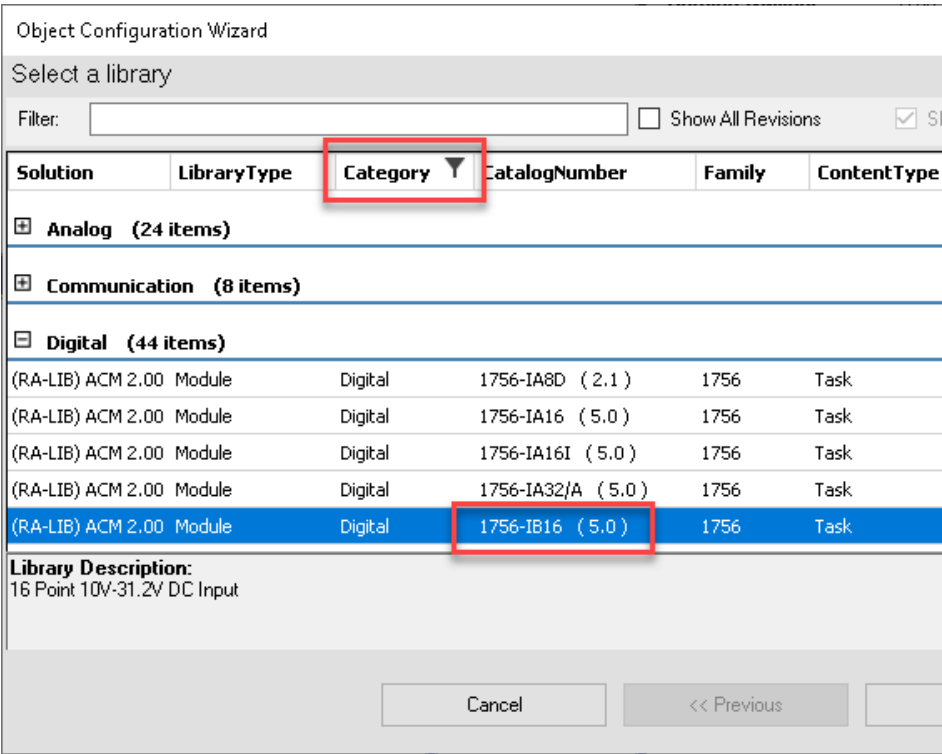

Slot	0
ChassisName	ControlLogix_1756_ID
Address	192.168.1.15
Size	17
RPI	20
Unicast	0

## Adding I/O Modules

If an I/O chassis exists in a project then you can add I/O modules to that chassis. To add a new I/O module right-click on a chassis' communications adapter module and *Add New...*

You may choose to click on the *Category* filter to easily sort and find *Analog* or *Digital* modules. Selected the desired I/O module and click *Next*

Configuration parameters may vary slightly depending on the I/O module. Perform the following configuration:

- Assign **Channel Descriptions** to all channels. This will be entered in the I/O module tag's .@Description fields of the primary channel data tags. If using the HMI faceplates, it is recommended not to leave any descriptions blank since this will result in diagnostic events in FactoryTalk View.
- Assign the **FPLaunch\_Button\_Label** which sets the I/O module tag's .@Description extended tag property. This will be shown on the launch button if using the basic text launch buttons in FactoryTalk® View ME/SE.
- If using FactoryTalk® View ME/SE you may assign the **SEAssocDisplay** and/or **MEAssocDisplay** to create a launch button with pre-defined Global Object Parameters. For more information on HMI Configuration refer to [Configuring Displays](#).
- Assign the desired module **Slot** and **RPI**.

- Note that there is nothing to complete on the DI/DO/AI/AO tab.
- Click Finish to complete the object configuration.

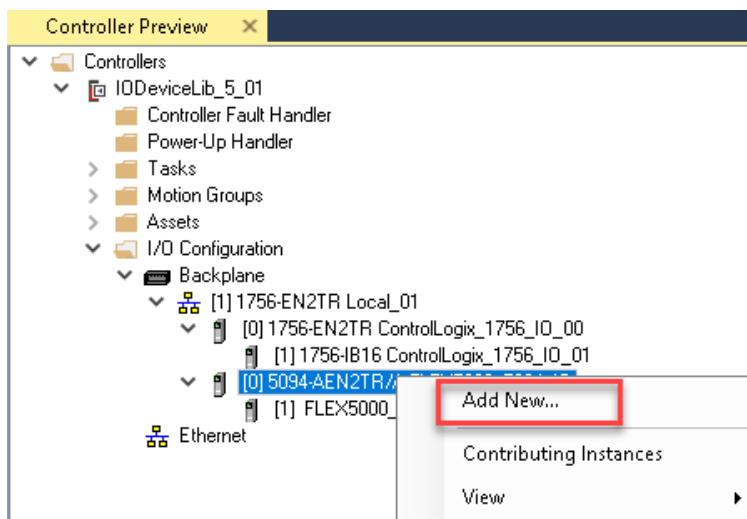

For specific device details, refer to the appropriate chapter in this manual.

## Adding HART Devices to 50xx HART Analog Module Channels

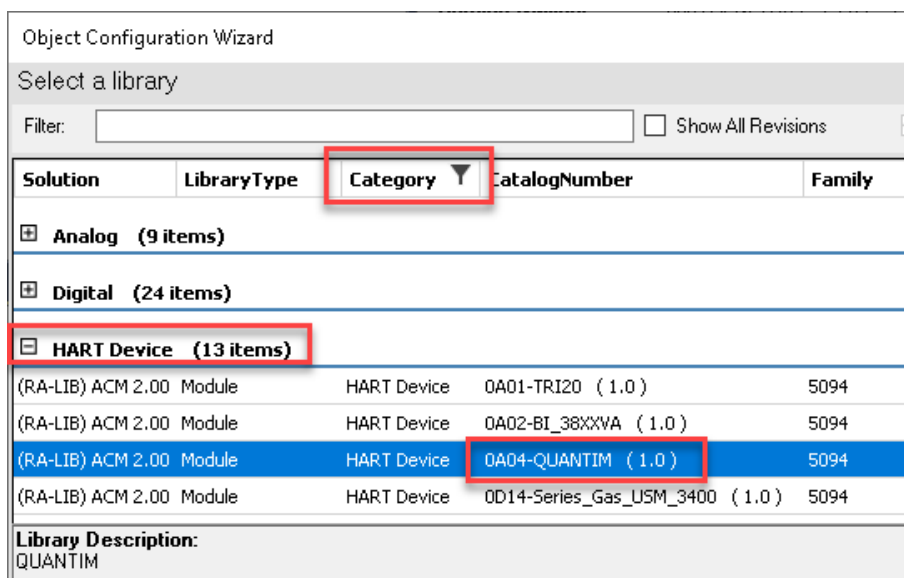

You can optionally add HART devices to compatible HART Analog I/O modules. At this time, compatible I/O modules include:

- 5094-IF8IH/XT
- 5094-OF8IH/XT
- 5015-U8IHFTXT
- 5069-IF4IH
- 5069-OF4IH

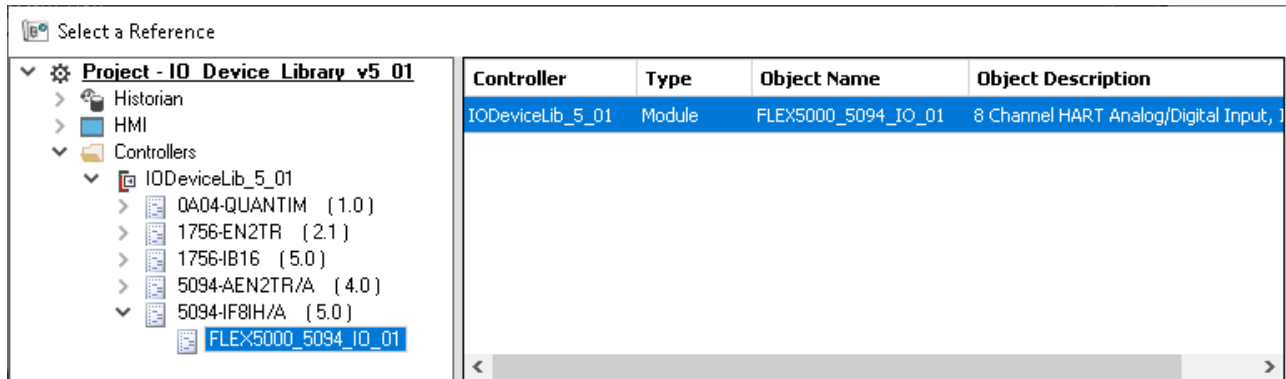

HART devices must be added to the communications adapter module in Application Code Manager. Right-click on the adapter and select *Add New...*

You may choose to click on the *Category* filter to easily sort and find *HART Device* modules. Selected the desired HART Device and click *Next*

In the *Object Configuration Wizard* of the HART Device you can assign the *ParentModule* to the Analog HART I/O module. Click ‘...’ to Select a Reference from the project.

Complete the device configuration by assigning the *I/O Channel* and adjust the *RPI* as needed.

### Using HART Devices with PlantPax PAI Instruction

To use Analog HART Modules and HART Devices in PlantPax DCS Applications you must configure the PAI instruction a specific way in Application Code Manager. There are two ways to use the PAI instruction with HART Devices:

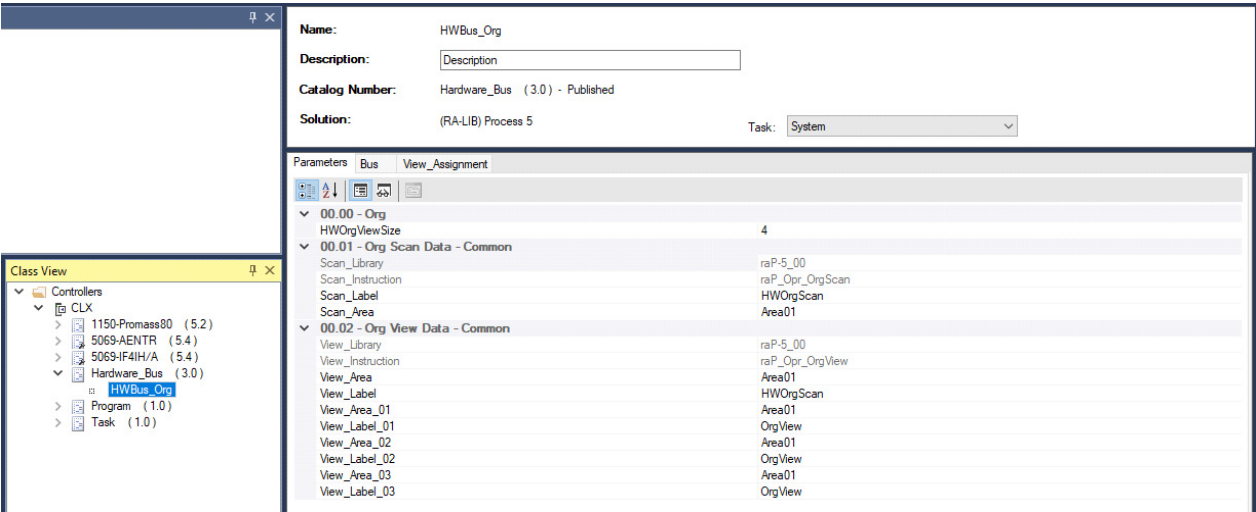

1. Analog HART Module with PV only from HART Device
2. Analog HART Module with PV/SV/TV/QV from HART Device

The two methods are as defined as follows.

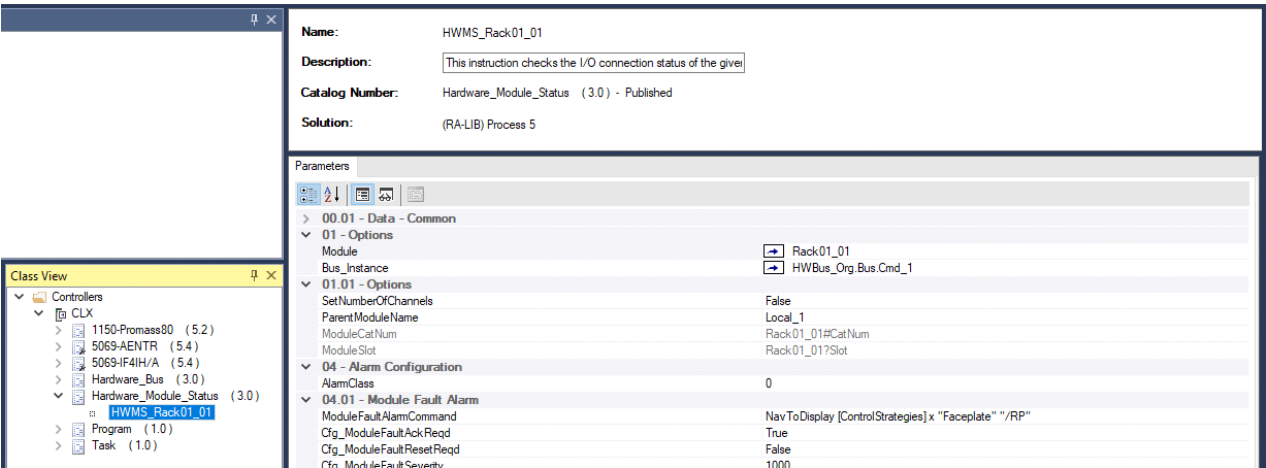

1. Analog HART Module with PV only from HART Device

Please note, the Connectiontype of Hart Device should be PlantPax.

After adding AI module, from the Process Library > Organization > Bus folder, add a Hardware\_Bus under System Task.

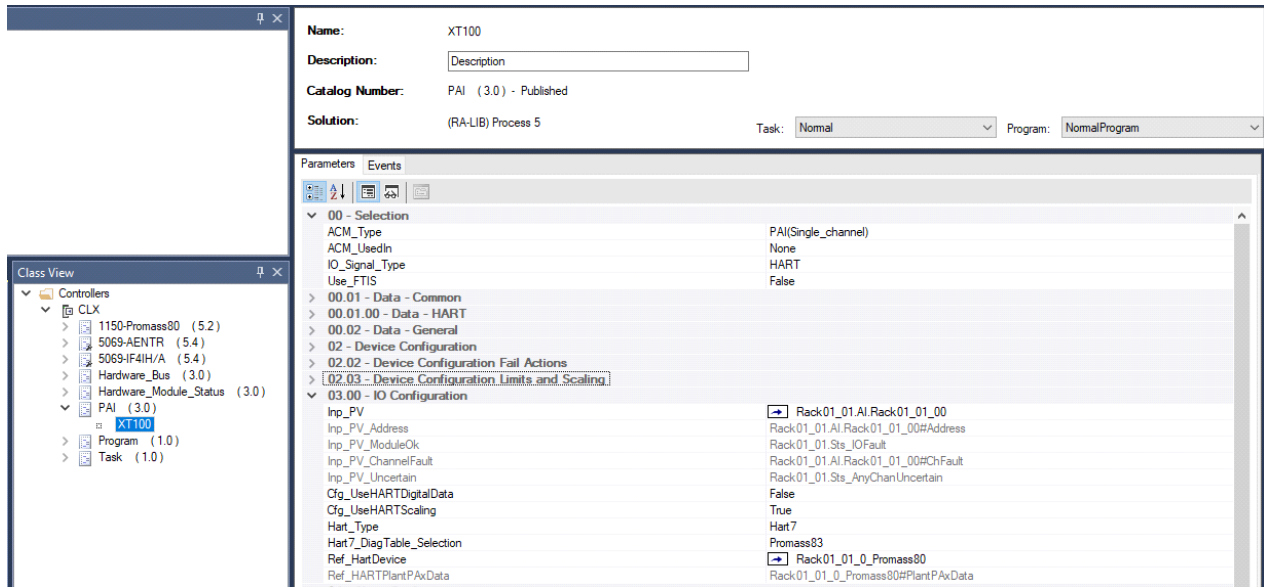

From the Process Library > Hardware Monitoring > Speciality folder, add Hardware\_Module\_Status and assign Module and Bus\_Instance to it.

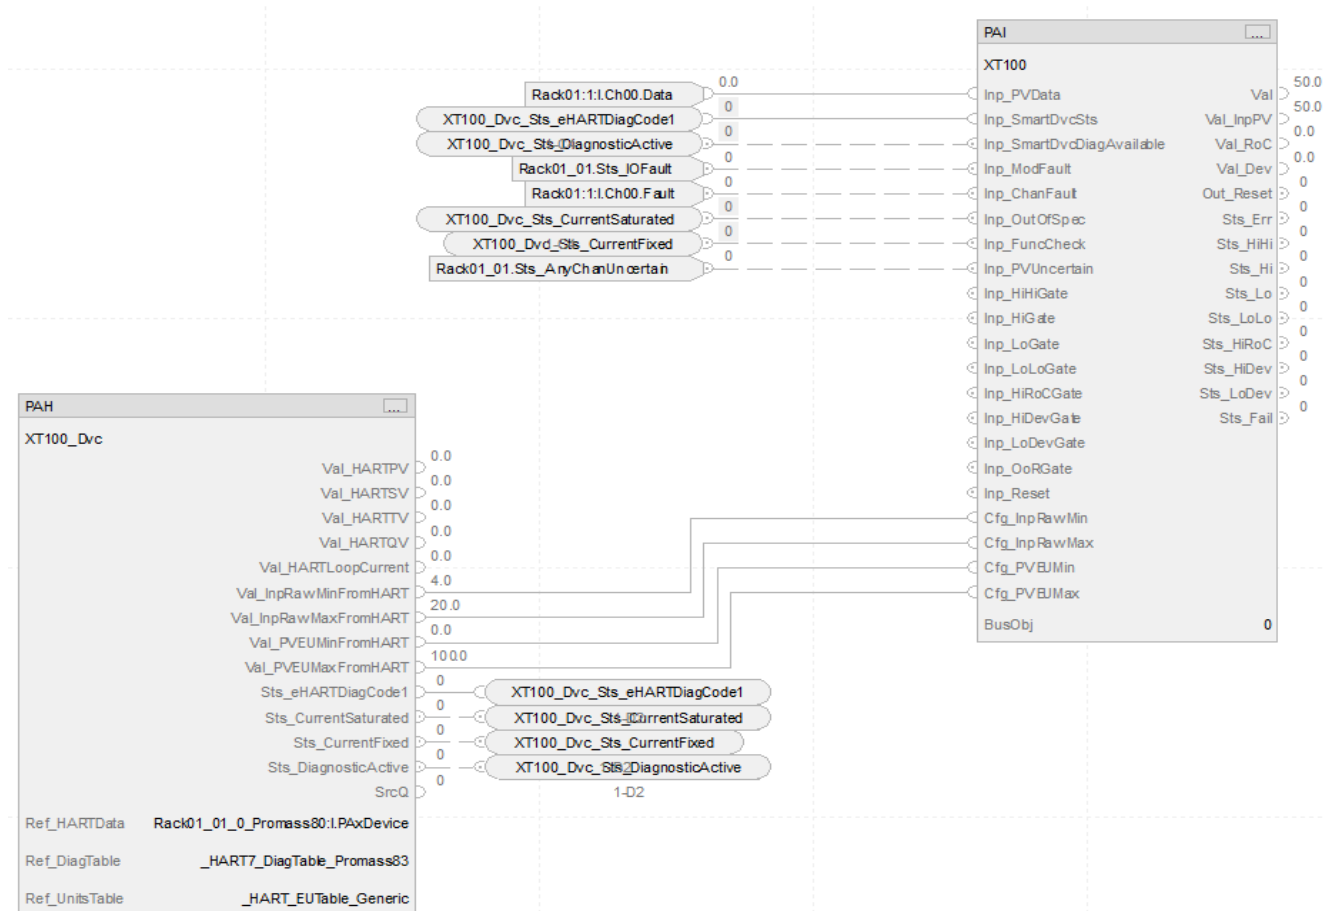

Then, From the Process library > Control Strategies > Input Processing folder, add a PAI instance for the analog input module and configure these parameters in the I/O Configuration section.

ACM Parameter	Usage
Task, Program	Assign a Task and Program for the PAI control strategy
IO_Signal_Type	Hart
Inp_PV	Connect to the channel of the IO module that the instrument is connected to.
Cfg_UseHARTDigitalData	Not applicable, leave at default value
Cfg_UseHARTScaling	Set to True if you want to connect the scaling parameters from the PAH module
Hart_Type	Select the HART protocol revision (Generic, Hart, Hart5, Hart6 or Hart7)
Hart7_DiagTable_Selection	Select the relevant Diag Table value for the instrument.
Ref_HartDevice	Connect to the instrument object in ACM

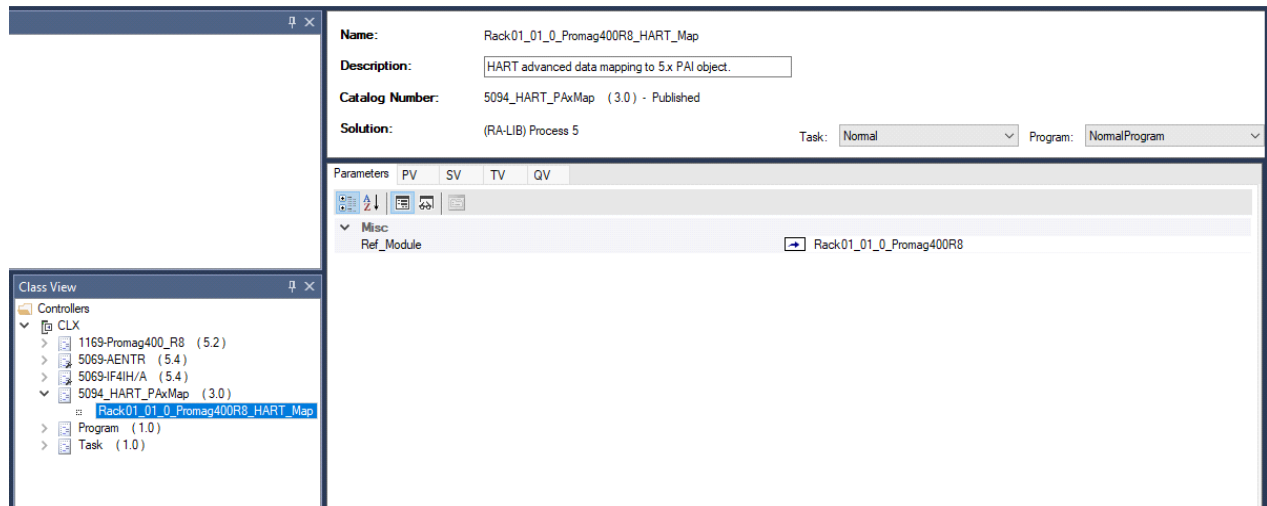

This generates the following Studio 5000 Logix Designer® code for a PlantPAx® project:

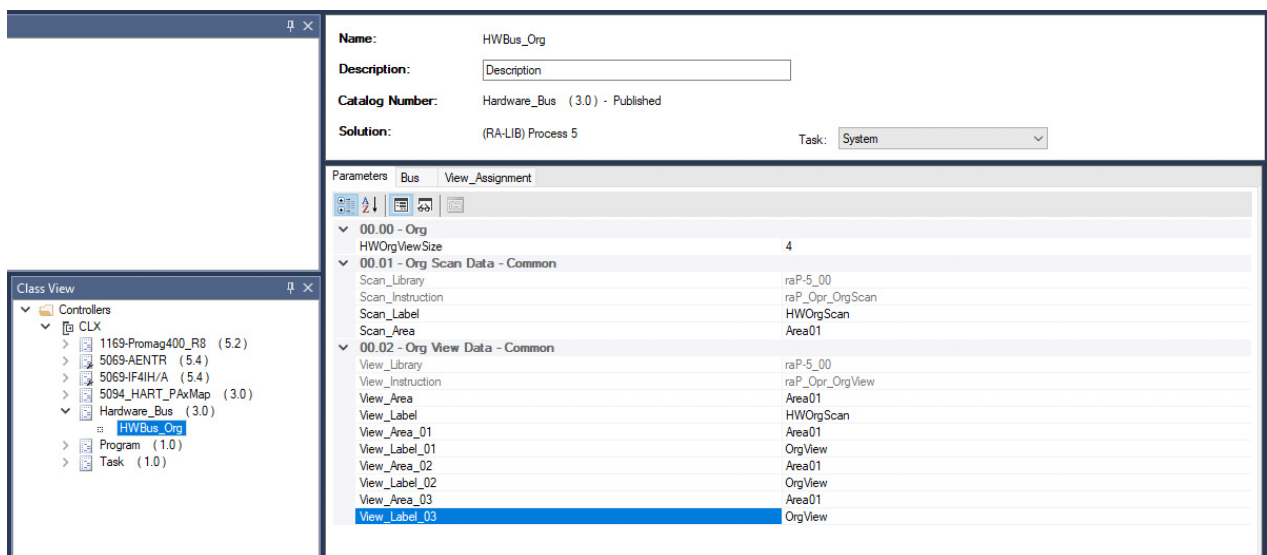

## 2. Analog HART Module with PV/SV/TV/FV from HART Device

Please note, the Connectiontype of Hart Device should be PlantPAx.

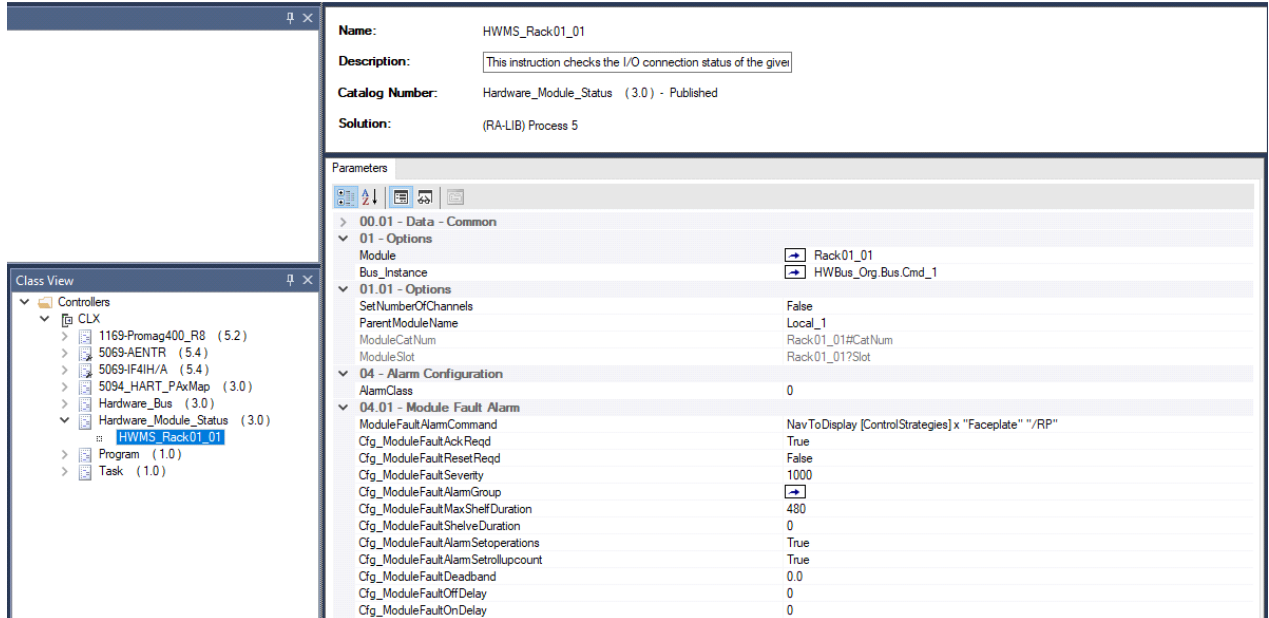

After adding AI module and Hart device, from the Process Library > HART IO Card Mapping, create an instance of the 5094\_Hart\_PAxMap and connect to the Hart instrument.

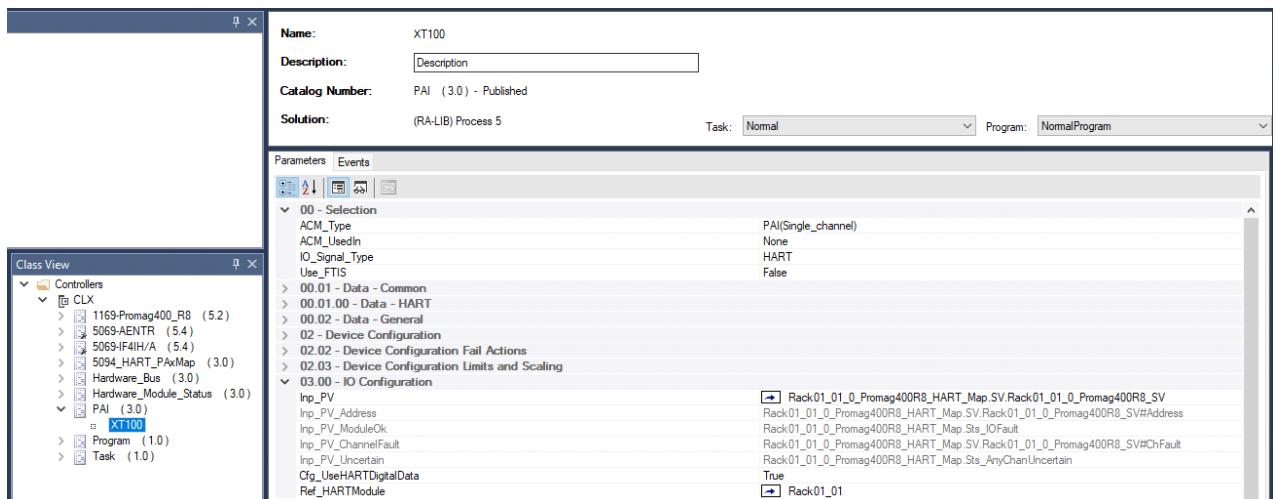

From the Process Library > Organization > Bus folder, add a Hardware\_Bus under System Task.

From the Process Library > Hardware Monitoring > Speciality folder, add Hardware\_Module\_Status and assign Module and Bus\_Instance to it.

Then, From the Process library > Control Strategies > Input Processing folder, add a PAI instance for the analog input module and configure these parameters in the I/O Configuration section.

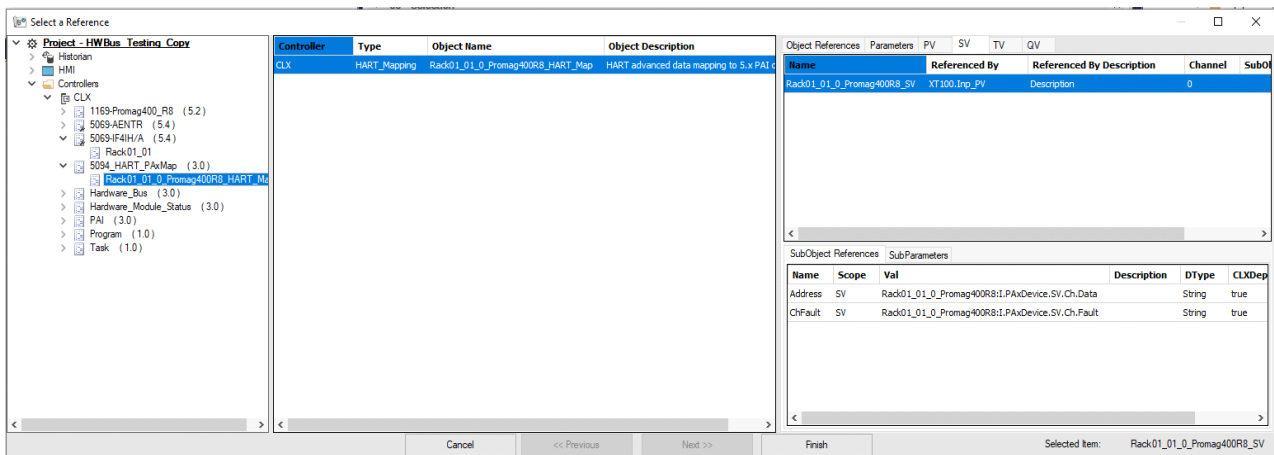

ACM Parameter	Usage
Task, Program	Assign a Task and Program for the PAI control strategy
IO_Signal_Type	Hart
Inp_PV	Set this reference to the PV, SV, TV or QV of the 5094_HART_MapIO object that was created for the HART device
Cfg_UseHARTDigitalData	Set to True
Ref_HartModule	Set this reference to the 5094 module that the instrument is connected to

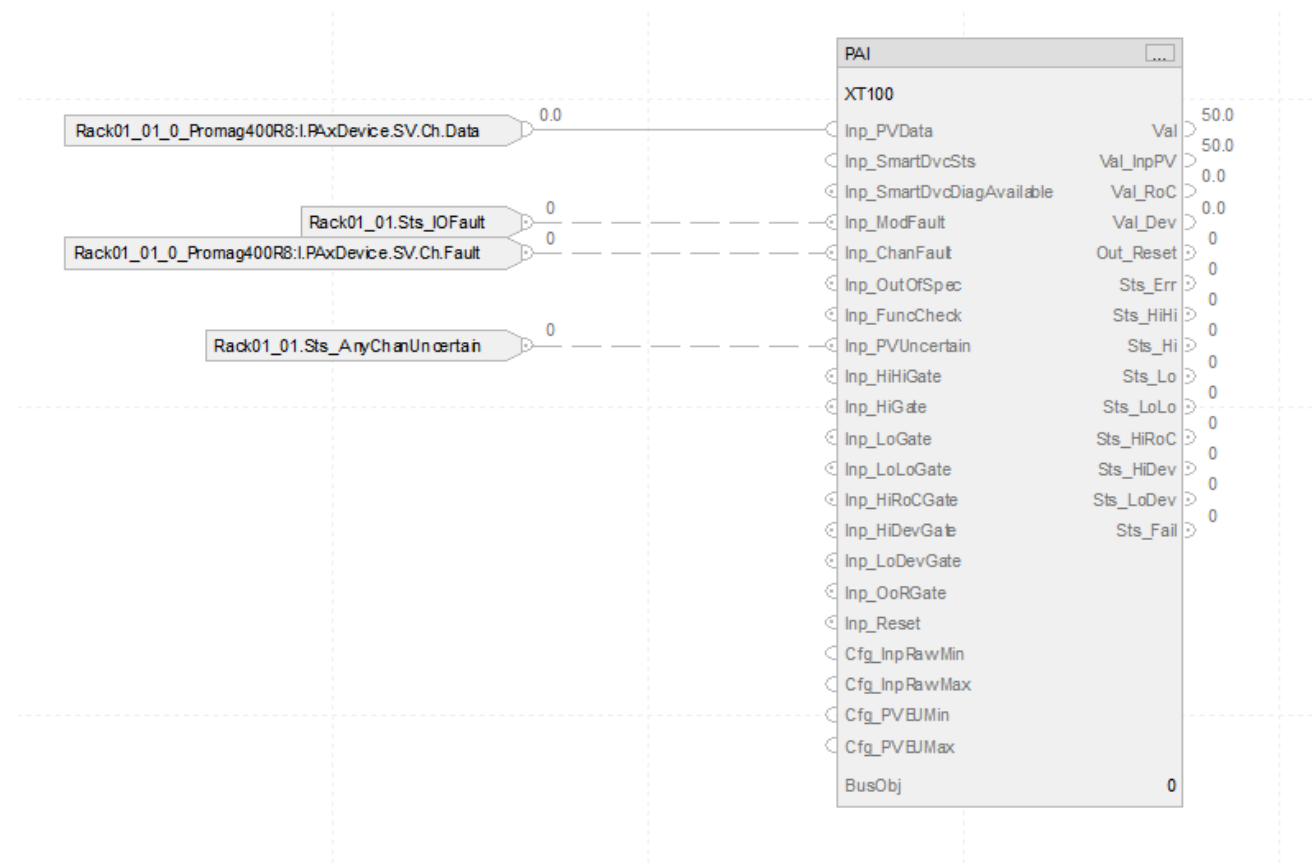

In this example the SV of the HART device is mapped:

03.00 - IO Configuration	
Inp_PV	Rack01_01_0_Promag400R8_HART_Map.SV.Rack01_01_0_Promag400R8_SV
Inp_PV_Address	Rack01_01_0_Promag400R8_HART_Map.SV.Rack01_01_0_Promag400R8_SV#Address
Inp_PV_ModuleOk	Rack01_01_0_Promag400R8_HART_Map.Sts_IOFault
Inp_PV_ChannelFault	Rack01_01_0_Promag400R8_HART_Map.SV.Rack01_01_0_Promag400R8_SV#ChFault
Inp_PV_Uncertain	Rack01_01_0_Promag400R8_HART_Map.Sts_AnyChanUncertain
Cfg_UseHARTDigitalData	True
Ref_HARTModule	Rack01_01_0_Promag400R8

To do so, you can browse to select a reference from the device as shown below:

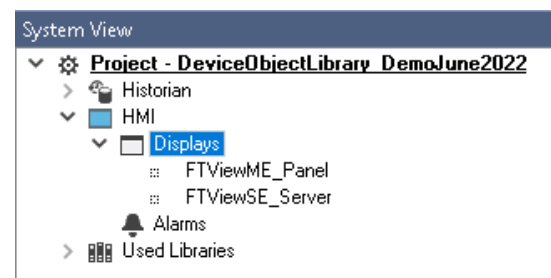

This generates the following Studio 5000 Logix Designer® code for a PlantPAx® project:

# Configuring Displays

Application Code Manager can be used to automatically configure graphic symbol launch buttons for device objects In FactoryTalk® View ME or SE. Note that Application Code Manager is not compatible with Studio 5000 View Designer® applications.

First you must add Displays to your project. Under the *System View* panel expand *HMI* and right-click on *Displays* to select *Add*. Choose the type of display (e.g. *FTViewME* or *FTViewSE* depending on your project requirements).

Object Configuration Wizard									
Select a library									
Filter: <input type="text"/>				<input type="checkbox"/> Show All Revisions		<input checked="" type="checkbox"/> Show All Libraries			
Solution	LibraryType	Category	CatalogNumber	Family	ContentType	Class	Status	SchemaVersion	Owner
Display (4 items)									
(RA-LIB) ACM 2.00	HMI	Display	FTViewME ( 2.2 )	Project		Standard	Published	2.0.0	Rockwell Aut
(RA-LIB) ACM 2.00	HMI	Display	FTViewSE ( 2.2 )	Project		Standard	Published	2.0.0	Rockwell Aut
(RA-LIB) Machine	HMI	Display	FwkB_DisplayME ( 1.3 )	Logix	Task	Standard	Published	2.0.0	RockwellAutr
(RA-LIB) Machine	HMI	Display	FwkB_DisplaySE ( 1.3 )	Logix	Task	Standard	Published	2.0.0	Rockwell Aut

In the display object parameter configuration, you must select the *DisplayTemplate* type to match the version of FactoryTalk® View application that you are using.

**Name:**

(RA-TPL)\_ACM\_2.00\_HMI\_Display\_FTViewME\_11.0\_(1.0).xml

Navigate to the *Displays* tab where you can right-click and *Add New* display.

Object Configuration Wizard

**Name:** FTViewSE

**Description:** FactoryTalk View SE Display

**Catalog Number:** FTViewSE (2.2) - Published

**Solution:** (RA-LIB)ACM 2.00

Parameters Displays

Name	SubObject Description
Add New	
Copy	
Paste	
Delete	
Reset Grouping...	

Set the desired name and display parameters. Generally all display parameters aside from *Name* can be left as default since this will often be used as a temporary display where object launch buttons are copied from.

**Name:** FTViewME\_Panel

**Description:** FactoryTalk View ME Display

**Catalog Number:** FTViewME (2.2) - Published

**Solution:** (RA-LIB)ACM 2.00

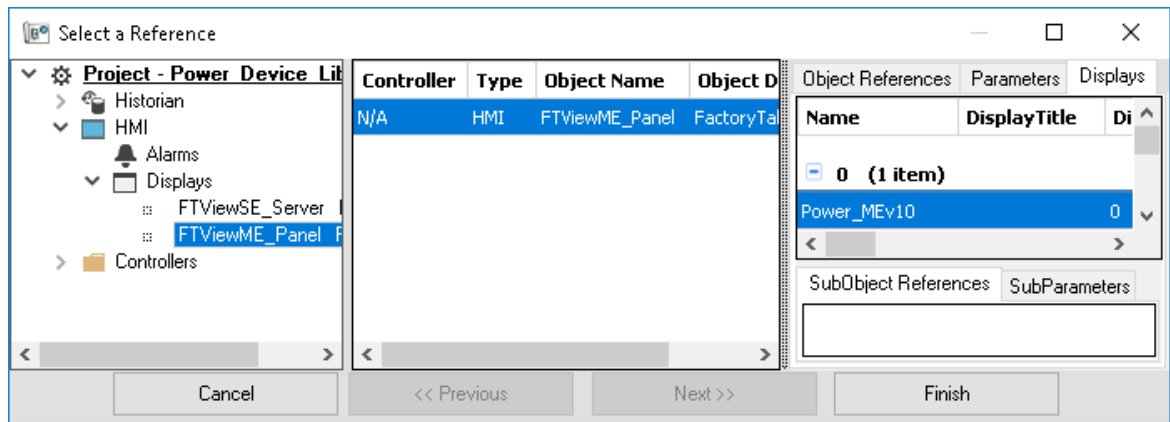

Parameters Displays

Name	DisplayTitle	DisplayLeft	DisplayTop	DisplayWidth
0 (1 item)				
Power_MEv10		0	0	800

Return to your device object configuration and view the *HMI Configuration* section of the parameters. You can browse or type in the *HMI\_Server\_Name.HMI\_Display\_Name*.

HMI Configuration	
SEAssocDisplay	FTViewSE_Server.GraphicDisplays.Power_SEv10
MEAssocDisplay	FTViewME_Panel.GraphicDisplays.Power_MEv10

If you browse for the display, select the desired display server in the left panel, then click on the *Display* tab in the right panel and select the specific display. Click finish.

This workflow can be followed for either FactoryTalk® View ME or SE depending on the project requirements.

## Generating Displays

Once you have assigned displays to all of the device objects, you can generate the displays. In the *System View* highlight the desired display server under *HMI* > *Display* and right-click to select *Generate Displays* > *All Displays* or select individual displays. Choose a place to save the generated files and take note of it.

## Importing Displays into FactoryTalk® View Studio

To import the configured displays, open your FactoryTalk® View ME/SE project in FactoryTalk® View Studio. Right-click on *Graphic* > *Displays* and select *Import and Export...*

Follow the required prompts:

- Import graphic information into displays
- Choose whether or not to backup displays
- Choose either a *Single display import file* (must have an existing or blank display to import into) or *Multiple displays batch import file* if *All Displays* was used to Generate Displays.
- If this is the first time it is recommended to import *Multiple displays batch import file* and then *Create new objects on the display*.
- If you have done this before and are updating the imported display after modifying your Application Code Manager project, you can choose *Update existing objects on the display*.
- Browse for the BatchImport.xml file or individual display.xml file.

Open up the newly imported display. Notice that there are graphic symbol launch buttons labeled and configured for each item that was configured in Application Code Manager.

Right-click on the object and select *Global Object Parameters* to view that all of the parameters have been pre-configured for you.

Global Object Parameter Values				
	Name	Value	Tag	Description
1	#102	(raC-5_01-ME) raC_Dvc_1756_OB16D-Faceplate	...	Faceplate Display Name e.g. (raC-5_00-ME) raC_Dvc_XXXX_XXXX-Faceplate
2	#103	{::[CLX]R1756:5:I}	...	IO Module Input Tag e.g. {::[Topic Name]Local:1:I}
3	#104	{::[CLX]R1756:5:O}	...	IO Module Output Tag e.g. {::[Topic Name]Local:1:O}
4	#106	DO	...	Custom button label. Leave blank to use InputTag.@Description
5	#120		...	Display's left position (e.g. 100)
6	#121		...	Display's top position (e.g. 100)

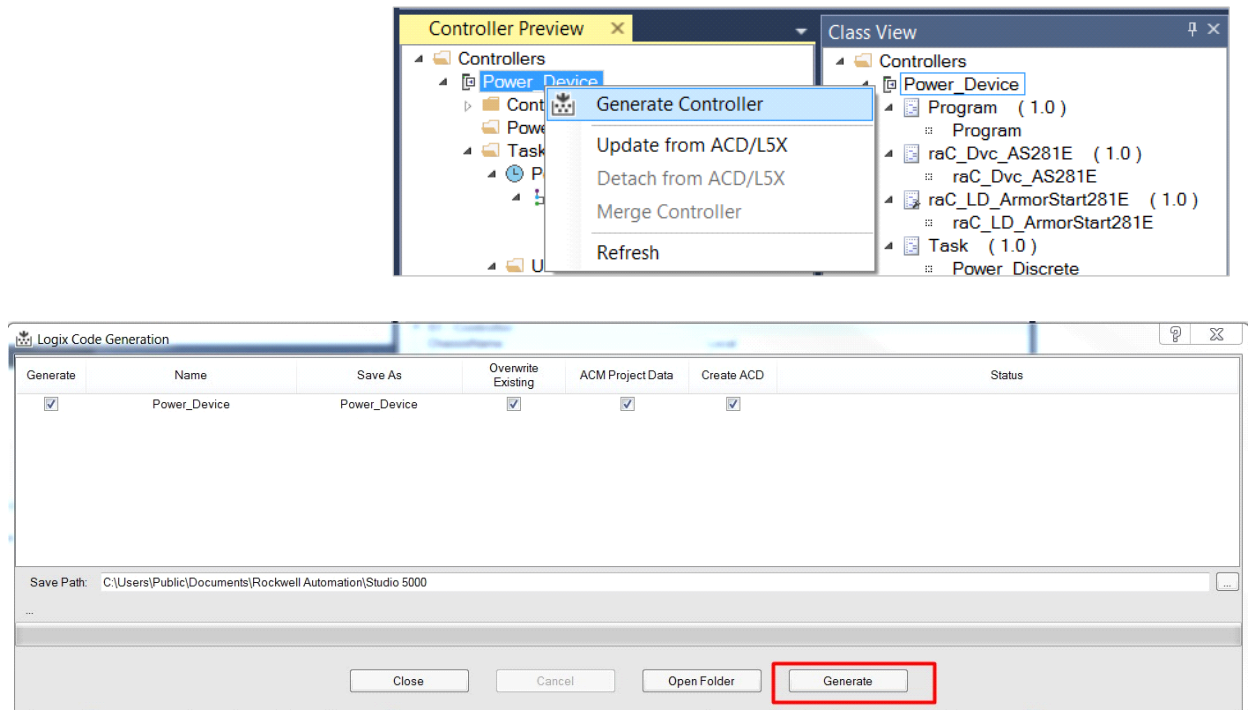

You may not copy and paste this graphic symbol onto any other display in your application.

## Generating Controller Files

Once you have completed configuring your project in Studio 5000® Application Code Manager, you can generate the controller file for use in Studio 5000 Logix Designer®.

In the *Controller Preview* pane right-click on the controller name within the *Controllers* folder and select *Generate Controller*.

In the *Logix Code Generation* dialogue window you will need to check *Create ACD*. You may also need to check *Overwrite Existing* if this is not the first time generating the controller code.

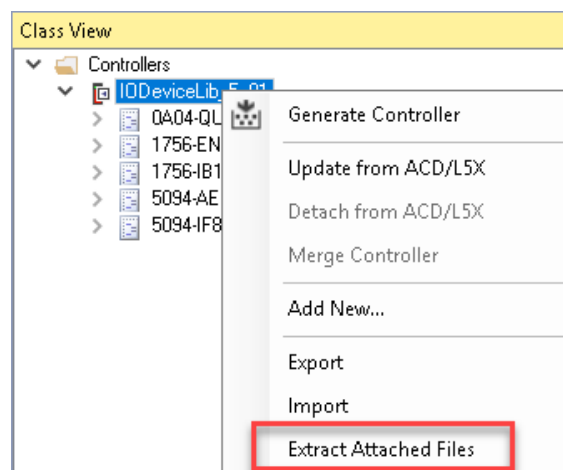

Once the controller file is generated, you can navigate to the location set in *Save Path* and open your file. Note that all of the configuration that was done in Application Code Manager is now shown in your Logix Designer ACD file.

## Exporting Attachments

Application Code Libraries not only contain Logix code, but also contain Visualization collateral and associated documentation. Every Asset library contains at least a reference manual (RM). Those libraries which have associated Visualization content also have all required global objects (GO), images, static displays and View Designer applications added as attachments. In this manner the user can generate only the necessary visualization and documentation for the objects included in the project.

To access the attached files, right click on the Controller in Class View and select *Extract Attached Files*.

---

Select the destination folder on your computer, and select OK. An Extract Attachments dialog will show the extraction status.

The extracted folder will contain the following:

- Reference Manual
- Required Images
- View Designer Faceplate Files
- FactoryTalk® View Machine Edition Displays
- FactoryTalk® View Machine Edition Global Objects
- FactoryTalk® View Site Edition Displays
- FactoryTalk® View Site Edition Global Objects

## **Using the IO Device Library with Other Application Code Libraries**

### **Application Code Libraries**

The IO Device Library is can be used alongside other Application Code Libraries.

The Machine Builder Library and PlantPAx® Process Object Library application-level library objects may be used in the same applications with the module objects in the IO Device Library. This allows you to map application instruction I/O tags to I/O module channels in your project.

The IO Device Library is also used with the Safety Device Library for safety applications to allow mapping safety instructions to I/O module channel tags.

## Digital Input Modules

### Overview

Digital input module objects include Studio 5000® Application Code Manager modules and HMI faceplates for FactoryTalk® View ME/SE and Studio 5000 View Designer®. HMI faceplates provide the following information:

- Module description, status, and faults
- Channel description, status and faults

### Required Files

IO Device Objects include HMI faceplates. There is no controller programming required other than the creation of the I/O module in the project. If using FactoryTalk® View ME/SE you must also import the tag import file *FTViewStudio\_IOLibrary\_Tags\_5\_00.CSV* to support navigation on faceplates with multiple tabs or pages.

Note that the revision numbers (e.g. 5.01) used in filenames below can change as new revisions are created.

### FactoryTalk® View HMI Files

FactoryTalk® View ME/SE applications require importing the desired device faceplates in addition to all Global Object (ggfx) files and all images located in the */HMI FactoryTalk® View Images - png/* folder of the library. FactoryTalk® View ME files are stored in the */HMI - FactoryTalk View ME/* library folder and FactoryTalk® View SE files are stored in the */HMI - FactoryTalk View SE/* library folder.

## Studio 5000 View Designer HMI Files

All Studio 5000 View Designer Files can be found in the */HMI - ViewDesigner - vpd/* folder of the library. Each I/O family (e.g. 1756) has a single .VPD file which contains faceplate screens for all I/O modules in that family.

Family	View Designer File	Module	View Designer Screen
1719	raC_Dvc_1719IO_wDesc.vpd	1719-IBN8	raC_Dvc_1719-IBN8_wDesc_FP
		1719-IBN8B	raC_Dvc_1719-IBN8B_wDesc_FP
1732E	raC_Dvc_1732IO_wDesc.vpd	1732E-IB16M12	raC_Dvc_1732E-IB16M12_wDesc_FP

## Studio 5000® Application Code Manager Files

Studio 5000® Application Code Manager (ACM) can be optionally used if it is installed. All devices can be easily registered in the ACM repositories by running the *setup.cmd* file located in the root folder of the library.

Individual HSL4 files are provided as an alternative to running the *setup.cmd* to allow users to manually register specific implementation objects. Each object has two files - an Asset Control file and a Device file. The Module files include attachments of all required files for that object.

All Studio 5000® Application Code Manager files can be found in the / *ApplicationCodeManagerLibraries/* folder of the library. The files included are as follows:

Family	Module	Application Code Manager File
1719	1719-IBN8	(RA-LIB)_ACM_2.00_Module_Digital_1719-IBN8_(5.3).HSL4

## Graphic Symbols

Graphic Symbols are used as launch buttons within HMI applications to open up faceplate displays. A generic rectangular pushbutton with a text label can be used, or a graphical style button with abnormal indicator icons can be used. See [Basic Launch Button Attributes](#) section for details on configuration and indicators.

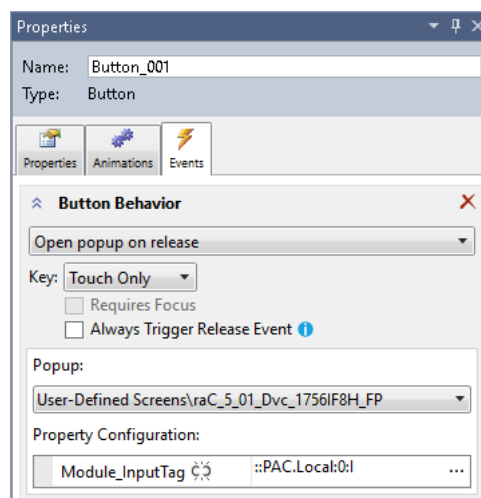

### FactoryTalk® View ME/SE Graphic Symbols

Graphic Symbol Name	Description	Global Object Parameter Values	Graphic Symbol
G0_GotoDisplay	Faceplate navigation button with string tag label.	#102: Faceplate Display Name #103: IO Module Input Tag #105: Custom button label. Leave blank to use Tag.@Description #120: Display's left position #121: Display's top position	
G0_LaunchDCIn_17xx	Use with 1715/1734/1756/1769 DC Input Modules	#102: Faceplate Display Name #103: IO Module Input Tag #120: Display's left position #121: Display's top position	
G0_LaunchDCIn_50xx	Use with 1719/5069/5015 DC Input Modules	#102: Faceplate Display Name #103: IO Module Input Tag #111: IO Class: Blank = Standard; 1= Safety #120: Display's left position #121: Display's top position	
G0_LaunchACIn_17xx	Use with 1715/1734/1756/1769 AC Input Modules	#102: Faceplate Display Name #103: IO Module Input Tag #120: Display's left position #121: Display's top position

## Studio 5000 View Designer® Graphic Symbols

All Studio 5000 View Designer® graphic symbols must be configured with an *Event* to open up the appropriate Popup screen. Select the graphic symbol and in the *Properties* window navigate to the *Events* tab. Assign a *Button Behavior* event to *Open popup on release*. Assign the required Popup screen (e.g. User-Defined Screens\raC\_5\_02\_Dvc\_1756OB16D\_wDesc\_FP). The required *Property Configurations* are found in the following table where you may assign an *InitialTab* to 11 to ensure the pop-up opens on the Home Tab, and assign the *Module\_InputTag* to the module's :I controller tag (e.g. ::PAC.Local:3:I).

Graphic Symbol Name	Description	Properties - Events Configuration	Graphic Symbol
Button_001	Faceplate navigation button with string tag label. Use Properties > General > Text to modify the button label text.	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_LaunchDCIn_17xx	Use with 1715/1734/1756/1769 DC Input Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_LaunchDCIn_50xx	Use with 1719/5069/5015 DC Input Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_LaunchACIn_17xx	Use with 1715/1734/1756/1769 AC Input Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_LaunchACIn_50xx	Use with 1719/5069/5015 AC Input Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_Launch_DCIn_1794	Use with 1794 DC Input Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_Launch_DCIn_5094	Use with 5094 DC Input Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_LaunchACIn_1794	Use with 1794 AC Input Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_LaunchACIn_5094	Use with 5094 AC Input Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_LaunchIn_Armor	Use with 1732E/1738 Digital Input Only Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_Launch_5032_CFG8 16M12_IN16/IN8	Use with 5032 Digital Input Only Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	

## Faceplates

There are basic faceplate attributes that are common across all instructions. See [Basic Faceplate Attributes](#) for more information.

In this document, the faceplate pictures (or snapshots) are shown in FactoryTalk® View ME. Faceplates will look similar in FactoryTalk® View SE or Studio 5000 View Designer®. Number of I/O channels and minor details may vary depending on the exact I/O module.

The faceplate title is linked to *Module:I.@description*, the *.@description* extended tag property of the module's input tag instance. This is user-configurable from controller/program tags in Studio 5000 Logix Designer.

Name	Description	Data Type
▶ R1756:2:I	1756-SOE	AB:1756_SOE_16PointCIPSync:I:0
▶ R1756:2:C	1756-SOE	AB:1756_SOE:C:1
▶ R1756:7:I	1756-OF8H	AB:1756_OF8H_AnalogHARTbyChannel...
▶ R1756:11:I	1756-OF8	AB:1756_OF8_Float:I:0
▶ R1756:6:I	1756-OBV8S Sourcing	AB:5000_SDO8:I:0
▶ R1756:10:I	1756-OB32	AB:1756_DO:I:0
▶ R1756:5:I	1756-OB16D	AB:1756_DO_DC_Diag:I:0
▶ R1756:4:I	1756-IF16H	AB:1756_IF16H_AnalogHARTbyChannel...
▶ R1756:9:I	1756-IF8	AB:1756_IF8_Float:I:0
▶ R1756:8:I	1756-IB32	AB:1756_DI:I:0

The I/O channel descriptions are linked to the channel's primary data tag *.@Description* field. For Digital Input modules this is the individual *I.Data.x* BOOL tags. Failure to fill in these tags will result in HMI diagnostic errors. These tags can be filled out using Studio 5000 Application Code Manager.

Name	Description	Data Type
▲ R1756:8:I	1756-IB32	AB:1756_DI:I:0
▶ R1756:8:I.Fault	1756-IB32	DINT
▲ R1756:8:I.Data	1756-IB32	DINT
R1756:8:I.Data.0	PB-201	BOOL
R1756:8:I.Data.1	PB-202	BOOL
R1756:8:I.Data.2	PB-203	BOOL
R1756:8:I.Data.3	LSL-300	BOOL
R1756:8:I.Data.4	LSH-300	BOOL
R1756:8:I.Data.5	LSHH-300	BOOL

## Home

The main tab of the faceplate is the Home tab, which displays information regarding the I/O channels and faults. The banner at the top of the faceplate displays module status and fault information.

Item	Description	
1	Faceplate title bar. Display's Module:I.@Description	
2	Module ready status.	
	GREEN = Ready	 Ready
	YELLOW = Module Fault/Not Ready	 Not Ready
3	Channel Status	
	BLUE = Active/High	
	GREY = Inactive/Low	
4	Channel Fault Indication. "!" icon and yellow border.	
5	Page navigation; used for modules with more than 16 channels.	
6	Module/Channel Fault status text. May display the following: - Module Fault - All Channel Data remains at last pre-fault state - Channel Fault Exists - Data remains at last pre-fault state	
7	Channel description. Module:I.Data.x.@Description	

## Application Code Manager

The IO Device Library can be used with Studio 5000® Application Code Manager to configure all required I/O for a project. All I/O modules can be found in the (RA-LIB) ACM 2.00 Library within the *Module* folder.

Refer to the section [Using Application Code Manager](#) for complete details.

## Module Object Parameters

Each module object (e.g. 1756-IB16F) has parameters which can be configured in Studio 5000® Application Code Manager prior to Controller code generation.

Parameter Name	Default Value	Description
ChxDescription		Channel tag description used in Module:I.Data.x.@Description tag and shown on HMI faceplates.
FPLaunch_Button_Label	[ModuleName]	Module:I.@Description tag and shown on basic text launch buttons.
SEAssocDisplay		Associated HMI SE Display
MEAssocDisplay		Associated HMI ME Display
Slot	Next Available	This is the slot that this module is located in.
RPI	20	This is the RPI of the module (ms).
ChassisName	[ChassisName]	This is the Chassis that this module is located in.
NavigationButton	GraphicalButton	Select Navigation Button Type

## Configured HMI Content

HMI Content	Instance Name	Description

## Digital Input Diagnostic Modules

### Overview

Digital input diagnostic module objects include Studio 5000® Application Code Manager modules and HMI faceplates for FactoryTalk® View ME/SE and Studio 5000 View Designer®. HMI faceplates provide the following information:

- Module description, status, and faults
- Channel description, status and detailed faults

### Required Files

IO Device Objects include HMI faceplates. There is no controller programming required other than the creation of the I/O module in the project. If using FactoryTalk® View ME/SE you must also import the tag import file *FTViewStudio\_IOLibrary\_Tags\_5\_00.CSV* to support navigation on faceplates with multiple tabs or pages.

Note that the revision numbers (e.g. 5.01) used in filenames below can change as new revisions are created.

### FactoryTalk® View HMI Files

FactoryTalk® View ME/SE applications require importing the desired device faceplates in addition to all Global Object (ggfx) files and all images located in the */HMI FactoryTalk® View Images - png/* folder of the library. FactoryTalk® View ME files are stored in the */HMI - FactoryTalk View ME/* library folder and FactoryTalk® View SE files are stored in the */HMI - FactoryTalk View SE/* library folder.

#### GGFX Global Object Files

## Studio 5000 View Designer HMI Files

All Studio 5000 View Designer Files can be found in the */HMI - ViewDesigner - vpd/* folder of the library. Each I/O family (e.g. 1756) has a single .VPD file which contains faceplate screens for all I/O modules in that family.

Family	View Designer File	Module	View Designer Screen
1756	raC_Dvc_1756IO_wDesc.vpd	1756-IA8D	raC_Dvc_1756-IA8D_wDesc_FP
		1756-IB16D	raC_Dvc_1756-IB16D_wDesc_FP
1734	raC_Dvc_1734IO_wDesc.vpd	1734-IB4D	raC_Dvc_1734-IB4D_wDesc_FP
1794	raC_Dvc_1794IO_wDesc.vpd	1794-IB16D	raC_Dvc_1794-IB16D_wDesc_FP
1715	raC_Dvc_1715IO_wDesc.vpd	1715-IB16D	raC_Dvc_1715-IB16D_Simplex_wDesc_FP

## Studio 5000® Application Code Manager Files

Studio 5000® Application Code Manager (ACM) can be optionally used if it is installed. All devices can be easily registered in the ACM repositories by running the *setup.cmd* file located in the root folder of the library.

Individual HSL4 files are provided as an alternative to running the *setup.cmd* to allow users to manually register specific implementation objects. Each object has two files - an Asset Control file and a Device file. The Module files include attachments of all required files for that object.

All Studio 5000® Application Code Manager files can be found in the */ApplicationCodeManagerLibraries/* folder of the library. The files included are as follows:

Family	Module	Application Code Manager File
1756	1756-IA8D	(RA-LIB)_ACM_2.00_Module_Digital_1756-IA8D_(5.3).HSL4
	1756-IB16D	(RA-LIB)_ACM_2.00_Module_Digital_1756-IB16D_(5.3).HSL4
1734	1734-IB4D	(RA-LIB)_ACM_2.00_Module_Digital_1734-IB4D_C_(5.3).HSL4
1794	1794-IB16D	(RA-LIB)_ACM_2.00_Module_Digital_1794-IB16D_A_(5.3).HSL4
1715	1715-IB16D	(RA-LIB)_ACM_2.00_Module_Digital_1715-IB16D_A_(5.3).HSL4

Family	Module	Application Code Manager File
1732E	1732E-1B16M12DR	(RA-LIB)_ACM_2.00_Module_Digital_1732E-1B16M12DR_B_(5.4).HSL4
	1732E-1B16M12SOEDR	(RA-LIB)_ACM_2.00_Module_Digital_1732E-1B16M12SOEDR_A_(5.4).HSL4

## Graphic Symbols

Graphic Symbols are used as launch buttons within HMI applications to open up faceplate displays. A generic rectangular pushbutton with a text label can be used, or a graphical style button with abnormal indicator icons can be used. See [Basic Launch Button Attributes](#) section for details on configuration and indicators.

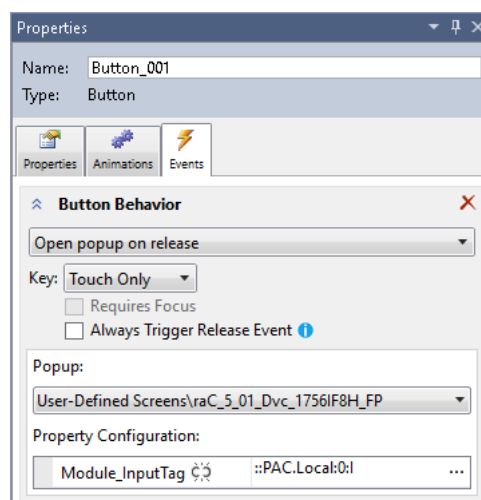

### FactoryTalk® View ME/SE Graphic Symbols

Graphic Symbol Name	Description	Global Object Parameter Values	Graphic Symbol
G0_GotoDisplay	Faceplate navigation button with string tag label.	#102: Faceplate Display Name #103: IO Module Input Tag #105: Custom button label. Leave blank to use Tag.@Description #120: Display's left position #121: Display's top position	
G0_LaunchDCIn_17xx	Use with 1715/1734/1756/1769 DC Input Modules	#102: Faceplate Display Name #103: IO Module Input Tag #120: Display's left position #121: Display's top position	
G0_LaunchDCIn_50xx	Use with 1719/5069/5015 DC Input Modules	#102: Faceplate Display Name #103: IO Module Input Tag #111: IO Class: Blank = Standard; 1= Safety #120: Display's left position #121: Display's top position

GO_Launch_ACIn_5094	Use with 5094 AC Input Modules	#102: Faceplate Display Name #103: IO Module Input Tag #111: IO Class: Blank = Standard; 1= Safety #120: Display's left position #121: Display's top position	

## Studio 5000 View Designer® Graphic Symbols

All Studio 5000 View Designer® graphic symbols must be configured with an *Event* to open up the appropriate Popup screen. Select the graphic symbol and in the *Properties* window navigate to the *Events* tab. Assign a *Button Behavior* event to *Open popup on release*. Assign the required Popup screen (e.g. User-Defined Screens\raC\_5\_02\_Dvc\_1756OB16D\_wDesc\_FP). The required *Property Configurations* are found in the following table where you may assign an *InitialTab* to 11 to ensure the pop-up opens on the Home Tab, and assign the *Module\_InputTag* to the module's :I controller tag (e.g. ::PAC.Local:3:I).

Graphic Symbol Name	Description	Properties - Events Configuration	Graphic Symbol
Button_001	Faceplate navigation button with string tag label. Use Properties > General > Text to modify the button label text.	InitialTab: 11 Module.InputTag: IO Module Input Tag	
GO_LaunchDCIn_17xx	Use with 1715/1734/1756/1769 DC Input Modules	InitialTab: 11 Module.InputTag: IO Module Input Tag	
GO_LaunchDCIn_50xx	Use with 1719/5069/5015 DC Input Modules	InitialTab: 11 Module.InputTag: IO Module Input Tag	
GO_LaunchACIn_17xx	Use with 1715/1734/1756/1769 AC Input Modules	InitialTab: 11 Module.InputTag: IO Module Input Tag	
GO_LaunchACIn_50xx	Use with 1719/5069/5015 AC Input Modules	InitialTab: 11 Module.InputTag: IO Module Input Tag	
GO_Launch_DCIn_1794	Use with 1794 DC Input Modules	InitialTab: 11 Module.InputTag: IO Module Input Tag	
GO_Launch_DCIn_5094	Use with 5094 DC Input Modules	InitialTab: 11 Module.InputTag: IO Module Input Tag	
GO_LaunchACIn_1794	Use with 1794 AC Input Modules	InitialTab: 11 Module.InputTag: IO Module Input Tag	
GO_LaunchACIn_5094	Use with 5094 AC Input Modules	InitialTab: 11 Module.InputTag: IO Module Input Tag	

## Faceplates

There are basic faceplate attributes that are common across all instructions. See [Basic Faceplate Attributes](#) for more information.

In this document, the faceplate pictures (or snapshots) are shown in FactoryTalk® View ME. Faceplates will look similar in FactoryTalk® View SE or Studio 5000 View Designer®. Number of I/O channels and minor details may vary depending on the exact I/O module.

The faceplate title is linked to *Module:I.@description*, the *.@description* extended tag property of the module's input tag instance. This is user-configurable from controller/program tags in Studio 5000 Logix Designer.

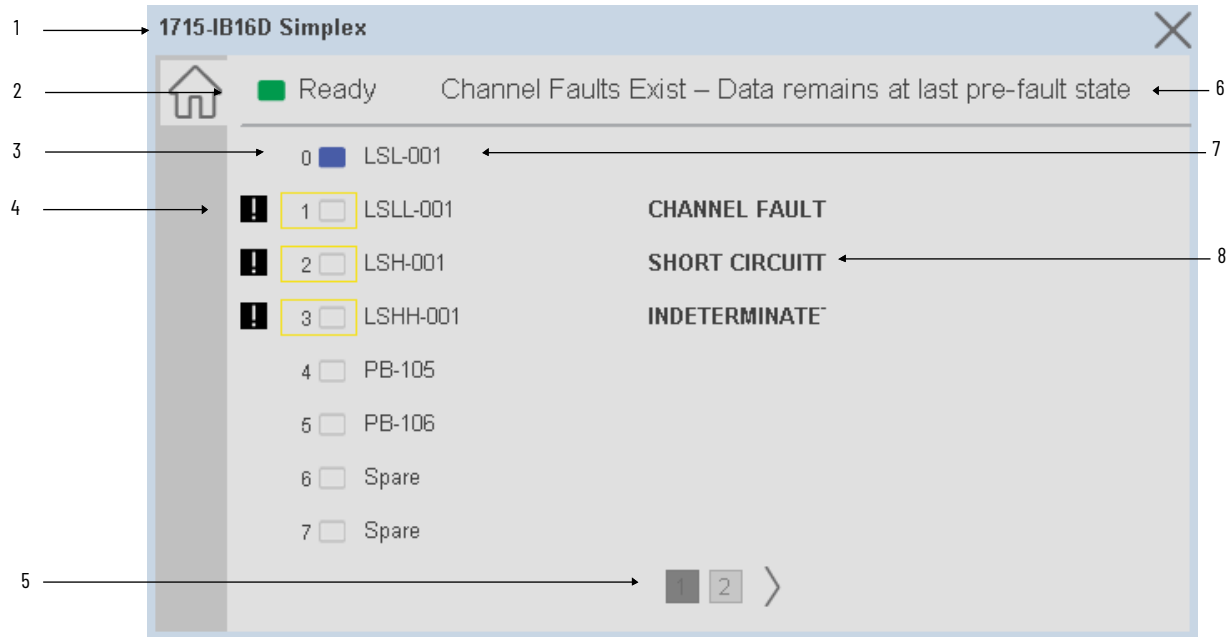

Name	Description	Data Type
▶ R1756:2:I	1756-SOE	AB:1756_SOE_16PointCIPSync:I:0
▶ R1756:2:C	1756-SOE	AB:1756_SOE:C:1
▶ R1756:7:I	1756-OF8H	AB:1756_OF8H_AnalogHARTbyChannel...
▶ R1756:11:I	1756-OF8	AB:1756_OF8_Float:I:0
▶ R1756:6:I	1756-OBV8S Sourcing	AB:5000_SDO8:I:0
▶ R1756:10:I	1756-OB32	AB:1756_DO:I:0
▶ R1756:5:I	1756-OB16D	AB:1756_DO_DC_Diag:I:0
▶ R1756:4:I	1756-IF16H	AB:1756_IF16H_AnalogHARTbyChannel...
▶ R1756:9:I	1756-IF8	AB:1756_IF8_Float:I:0
▶ R1756:8:I	1756-IB32	AB:1756_DI:I:0

The I/O channel descriptions are linked to the channel’s primary data tag *.@Description* field. For Digital Input modules this is the individual I.Data.x BOOL tags. Failure to fill in these tags will result in HMI diagnostic errors. These tags can be filled out using Studio 5000 Application Code Manager.

Name	Description	Data Type
▲ R1756:8:I	1756-IB32	AB:1756_DI:I:0
▶ R1756:8:I.Fault	1756-IB32	DINT
▲ R1756:8:I.Data	1756-IB32	DINT
R1756:8:I.Data.0	PB-201	BOOL
R1756:8:I.Data.1	PB-202	BOOL
R1756:8:I.Data.2	PB-203	BOOL
R1756:8:I.Data.3	LSL-300	BOOL
R1756:8:I.Data.4	LSH-300	BOOL
R1756:8:I.Data.5	LSHH-300	BOOL

Home

The Home tab is the main tab of the faceplate. I/O channel data and fault information. The banner at the top of the faceplate displays module status and fault information.

Item	Description	
1	Faceplate title bar. Display's Module:I.@Description	
2	Module ready status.	
	GREEN = Ready	 Ready
	YELLOW = Module Fault/Not Ready	 Not Ready
3	Channel Status	
	BLUE = Active/High	
	GREY = Inactive/Low	
4	Channel Fault Indication. "!" icon and yellow border.	
5	Page navigation; used for modules with more than 16 channels.	
6	Module/Channel Fault status text. May display the following: - Module Fault - All Channel Data remains at last pre-fault state - Channel Fault Exists - Data remains at last pre-fault state	
7	Channel description. Module:I.Data.x.@Description	
8	Channel Fault Description: - Open Wire - Fault - Short Circuit (1715 only) - Indeterminate (1715 Only)	

## Application Code Manager

The IO Device Library can be used with Studio 5000® Application Code Manager to configure all required I/O for a project. All I/O modules can be found in the (RA-LIB) ACM 2.00 Library within the *Module* folder.

Refer to the section [Using Application Code Manager](#) for complete details.

Module Object Parameters

Each module object (e.g. 1756-IB16D) has parameters which can be configured in Studio 5000® Application Code Manager prior to Controller code generation.

Parameter Name	Default Value	Description
ChxDescription		Channel tag description used in Module:I.Data.x.@Description tag and shown on HMI faceplates.
FPLaunch_Button_Label	[ModuleName]	Module:I.@Description tag and shown on basic text launch buttons.
SEAssocDisplay		Associated HMI SE Display
MEAssocDisplay		Associated HMI ME Display
Slot	Next Available	This is the slot that this module is located in.
RPI	20	This is the RPI of the module (ms).
ChassisName	[ChassisName]	This is the Chassis that this module is located in.
NavigationButton	GraphicalButton	Select Navigation Button Type

Configured HMI Content

HMI Content	Instance Name	Description

# Digital Output Modules

## Overview

Digital Output module objects include Studio 5000® Application Code Manager modules and HMI faceplates for FactoryTalk® View ME/SE and Studio 5000 View Designer®. HMI faceplates provide the following information:

- Module description, status, and faults
- Channel description, status and faults

## Required Files

IO Device Objects include HMI faceplates. There is no controller programming required other than the creation of the I/O module in the project. If using FactoryTalk® View ME/SE you must also import the tag import file *FTViewStudio\_IOLibrary\_Tags\_5\_00.CSV* to support navigation on faceplates with multiple tabs or pages.

Note that the revision numbers (e.g. 5.01) used in filenames below can change as new revisions are created.

## FactoryTalk® View HMI Files

FactoryTalk® View ME/SE applications require importing the desired device faceplates in addition to all Global Object (ggfx) files and all images located in the */HMI FactoryTalk® View Images - png/* folder of the library. FactoryTalk® View ME files are stored in the */HMI - FactoryTalk View ME/* library folder and FactoryTalk® View SE files are stored in the */HMI - FactoryTalk View SE/* library folder.

## Studio 5000 View Designer HMI Files

All Studio 5000 View Designer Files can be found in the */HMI - ViewDesigner - vpd/* folder of the library. Each I/O family (e.g. 1756) has a single .VPD file which contains faceplate screens for all I/O modules in that family.

Family	View Designer File	Module	View Designer Screen
1719	raC_Dvc_1719IO_wDesc.vpd	1719-0B2	raC_Dvc_1719-0B2_wDesc_FP
	raC_Dvc_1719IO_wDesc.vpd	1719-0B2L	raC_Dvc_1719-0B2L_wDesc_FP

Family	View Designer File	Module	View Designer Screen
1732E	raC_Dvc_1732IO_wDesc.vpd	1732E-OB16M12	raC_Dvc_1732E-OB16M12_wDesc_FP

## Studio 5000® Application Code Manager Files

Studio 5000® Application Code Manager (ACM) can be optionally used if it is installed. All devices can be easily registered in the ACM repositories by running the *setup.cmd* file located in the root folder of the library.

Individual HSL4 files are provided as an alternative to running the *setup.cmd* to allow users to manually register specific implementation objects. Each object has two files - an Asset Control file and a Device file. The Module files include attachments of all required files for that object.

All Studio 5000® Application Code Manager files can be found in the / *ApplicationCodeManagerLibraries/* folder of the library. The files included are as follows:

Family	Module	Application Code Manager File
1719	1719-OB2	(RA-LIB)_ACM_2.00_Module_Digital_1719-OB2_A_(5.3).HSL4

## Graphic Symbols

Graphic Symbols are used as launch buttons within HMI applications to open up faceplate displays. A generic rectangular pushbutton with a text label can be used, or a graphical style button with abnormal indicator icons can be used. See [Basic Launch Button Attributes](#) section for details on configuration and indicators.

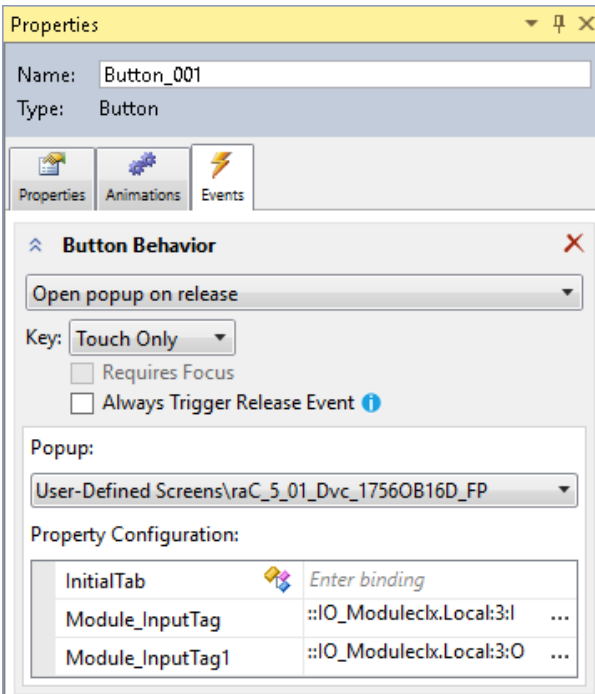

## FactoryTalk® View ME/SE Graphic Symbols

Graphic Symbol Name	Description	Global Object Parameter Values	Graphic Symbol
GO_GotoDisplay1	Faceplate navigation button with string tag label.	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #105: Custom button label. Leave blank to use Tag.@Description #120: Display's left position #121: Display's top position	
GO_LaunchDCOut_17xx	Use with 1715/1734/1756/1769 DC Output Modules	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #120: Display's left position #121: Display's top position	
GO_LaunchDCOut_50xx	Use with 1719/5069/5015 DC Output Modules	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #111: IO Class: Blank = Standard; 1= Safety #120: Display's left position #121: Display's top position	
GO_LaunchACOut_17xx	Use with 1715/1734/1756/1769 AC Output Modules	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #120: Display's left position #121: Display's top position	
GO_LaunchACOut_50xx	Use with 1719/5069/5015 AC Output Modules	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #111: IO Class: Blank = Standard; 1= Safety #120: Display's left position #121: Display's top position	
GO_Launch_DCOut_1794	Use with 1794 DC Output Modules	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #120: Display's left position #121: Display's top position

GO_LaunchACOut_1794	Use with 1794 AC Output Modules	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #120: Display's left position #121: Display's top position	
GO_LaunchACOut_5094	Use with 5094 AC Output Modules	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #111: IO Class: Blank = Standard; 1= Safety #120: Display's left position #121: Display's top position	
GO_LaunchInOut_Armor	Use with 1732E/1738 Digital Input/Output Modules	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #105: Custom button label. Leave blank to use Tag.@Description #120: Display's left position #121: Display's top position	
GO_Launch_Armor_OUT	Use with 5032 Digital Output Only Modules	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #105: Custom button label. Leave blank to use Tag.@Description #120: Display's left position #121: Display's top position	

### Studio 5000 View Designer® Graphic Symbols

All Studio 5000 View Designer® graphic symbols must be configured with an *Event* to open up the appropriate Popup screen. Select the graphic symbol and in the *Properties* window navigate to the *Events* tab. Assign a *Button Behavior* event to *Open popup on release*. Assign the required Popup screen (e.g. User-Defined Screens\raC\_5\_02\_Dvc\_1756OB16D\_wDesc\_FP). The required *Property Configurations* are found in the following table where you may assign an *InitialTab* to 11 to ensure the pop-up opens on the Home Tab, and assign the *Module\_InputTag* to the module's :I controller tag (e.g. ::PAC.Local:3:I) and *Module\_OutputTag* to the module's :O controller tag (e.g. ::PAC.Local:3:O).

Graphic Symbol Name	Description	Properties - Events Configuration	Graphic Symbol
Button_001	Faceplate navigation button with string tag label. Use Properties > General > Text to modify the button label text.	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_LaunchDCOut_17xx	Use with 1715/1734/1756/1769 DC Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_LaunchDCOut_50xx	Use with 1719/5069/5015 DC Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_LaunchACOut_17xx	Use with 1715/1734/1756/1769 AC Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_LaunchACOut_50xx	Use with 1719/5069/5015 AC Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	

Graphic Symbol Name	Description	Properties - Events Configuration	Graphic Symbol
GO_Launch_DCOut_1794	Use with 1794 DC Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_Launch_DCOut_5094	Use with 5094 DC Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_Launch_ACOut_1794	Use with 1794 AC Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_Launch_ACOut_5094	Use with 5094 AC Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_LaunchInOut_Armor	Use with 1732E/1738 Digital Input/Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_Launch_5032_CFBG16M12_OUT16/OUT8	Use with 5032 Digital Output Only Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	

## Faceplates

There are basic faceplate attributes that are common across all instructions. See [Basic Faceplate Attributes](#) for more information.

In this document, the faceplate pictures (or snapshots) are shown in FactoryTalk® View ME. Faceplates will look similar in FactoryTalk® View SE or Studio 5000 View Designer®. Number of I/O channels and minor details may vary depending on the exact I/O module.

The faceplate title is linked to *Module:I.@description*, the *.@description* extended tag property of the module's input tag instance. This is user-configurable from controller/program tags in Studio 5000 Logix Designer.

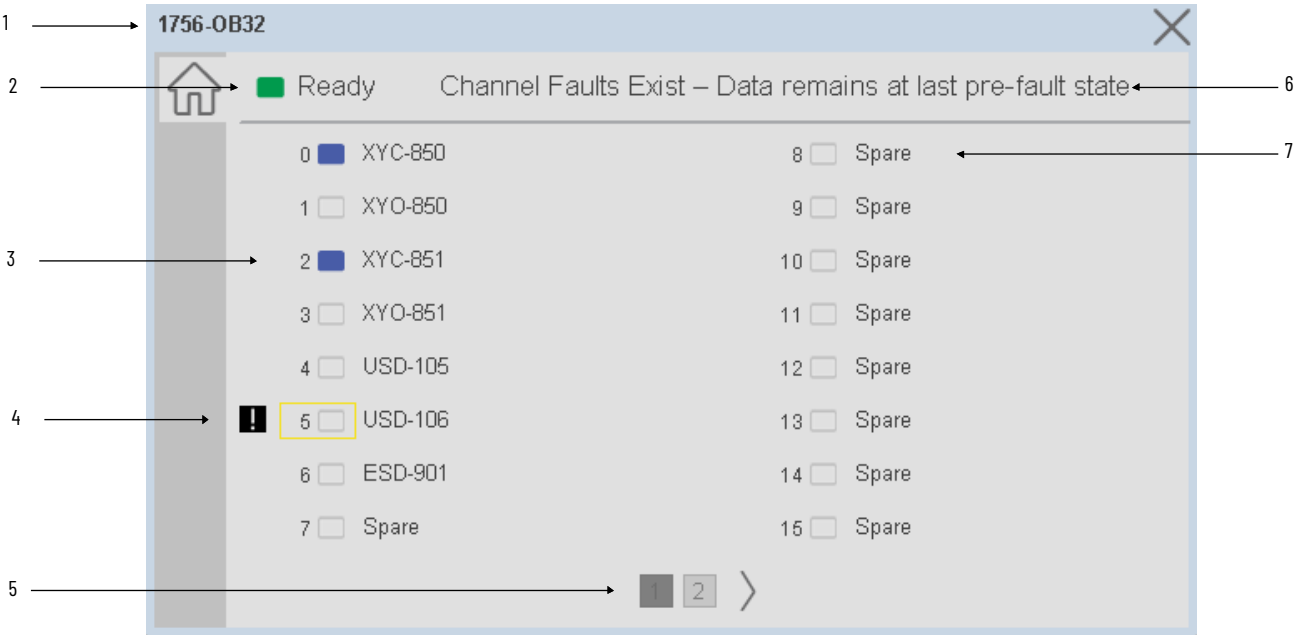

Name	Description	Data Type
▶ R1756:2:I	1756-SOE	AB:1756_SOE_16PointCIPSync:I:0
▶ R1756:2:C	1756-SOE	AB:1756_SOE:C:1
▶ R1756:7:I	1756-OF8H	AB:1756_OF8H_AnalogHARTbyChannel...
▶ R1756:11:I	1756-OF8	AB:1756_OF8_Float:I:0
▶ R1756:6:I	1756-OBV8S Sourcing	AB:5000_SDO8:I:0
▶ R1756:10:I	1756-OB32	AB:1756_DO:I:0
▶ R1756:5:I	1756-OB16D	AB:1756_DO_DC_Diag:I:0
▶ R1756:4:I	1756-IF16H	AB:1756_IF16H_AnalogHARTbyChannel...
▶ R1756:9:I	1756-IF8	AB:1756_IF8_Float:I:0
▶ R1756:8:I	1756-IB32	AB:1756_DI:I:0

The I/O channel descriptions are linked to the channel's primary data tag *.@Description* field. For Digital Output modules this is the individual O.Data.x BOOL tags. Failure to fill in these tags will result in HMI diagnostic errors. These tags can be filled out using Studio 5000 Application Code Manager.

Name	Description	Data Type
▲ R1756:10:I	1756-OB32	AB:1756_DO:I:0
▶ R1756:10:I.Fault	1756-OB32	DINT
▲ R1756:10:I.Data	1756-OB32	DINT
R1756:10:I.Data.0	XYC-100	BOOL
R1756:10:I.Data.1	XYO-100	BOOL
R1756:10:I.Data.2	XYC-101	BOOL
R1756:10:I.Data.3	XYO-101	BOOL
R1756:10:I.Data.4	USD-305	BOOL
R1756:10:I.Data.5	Spare	BOOL
R1756:10:I.Data.6	Spare	BOOL

Home

The main tab of the faceplate is the Home tab, which displays information regarding the I/O channels and faults. The banner at the top of the faceplate displays module status and fault information.

Item	Description	
1	Faceplate title bar. Display's Module:I.@Description	
2	Module ready status.	
	GREEN = Ready	 Ready
	YELLOW = Module Fault/Not Ready	 Not Ready
3	Channel Status	
	BLUE = Active/High	
	GREY = Inactive/Low	
4	Channel Fault Indication. "!" icon and yellow border.	
5	Page navigation; used for modules with more than 16 channels.	
6	Module/Channel Fault status text. May display the following: - Module Fault - All Channel Data remains at last pre-fault state - Channel Fault Exists - Data remains at last pre-fault state	
7	Channel description. Module:0.Data.x.@Description	

## Application Code Manager

The IO Device Library can be used with Studio 5000® Application Code Manager to configure all required I/O for a project. All I/O modules can be found in the (RA-LIB) ACM 2.00 Library within the *Module* folder.

Refer to the section [Using Application Code Manager](#) for complete details.

## Module Object Parameters

Each module object (e.g. 1756-OH8I) has parameters which can be configured in Studio 5000® Application Code Manager prior to Controller code generation.

Parameter Name	Default Value	Description
ChxDescription		Channel tag description used in Module:0.Data.x.@Description tag and shown on HMI faceplates.
FPLaunch_Button_Label	[ModuleName]	Module:I.@Description tag and shown on basic text launch buttons.
SEAssocDisplay		Associated HMI SE Display
MEAssocDisplay		Associated HMI ME Display
Slot	Next Available	This is the slot that this module is located in.

Parameter Name	Default Value	Description
RPI	20	This is the RPI of the module (ms).
ChassisName	[ChassisName]	This is the Chassis that this module is located in.
NavigationButton	GraphicalButton	Select Navigation Button Type

Configured HMI Content

## Digital Output Diagnostics Modules

### Overview

Digital Output diagnostic module objects include Studio 5000® Application Code Manager modules and HMI faceplates for FactoryTalk® View ME/SE and Studio 5000 View Designer®. HMI faceplates provide the following information:

- Module description, status, and faults
- Channel description, status and detailed faults

### Required Files

IO Device Objects include HMI faceplates. There is no controller programming required other than the creation of the I/O module in the project. If using FactoryTalk® View ME/SE you must also import the tag import file *FTViewStudio\_IOLibrary\_Tags\_5\_00.CSV* to support navigation on faceplates with multiple tabs or pages.

Note that the revision numbers (e.g. 5.01) used in filenames below can change as new revisions are created.

### FactoryTalk® View HMI Files

FactoryTalk® View ME/SE applications require importing the desired device faceplates in addition to all Global Object (ggfx) files and all images located in the */HMI FactoryTalk® View Images - png/* folder of the library. FactoryTalk® View ME files are stored in the */HMI - FactoryTalk View ME/* library folder and FactoryTalk® View SE files are stored in the */HMI - FactoryTalk View SE/* library folder.

#### GGFX Global Object Files

## Studio 5000 View Designer HMI Files

All Studio 5000 View Designer Files can be found in the */HMI - ViewDesigner - vpd/* folder of the library. Each I/O family (e.g. 1756) has a single .VPD file which contains faceplate screens for all I/O modules in that family.

Family	View Designer File	Module	View Designer Screen
1756	raC_Dvc_1756IO_wDesc.vpd	1756-0A8D	raC_Dvc_1756-0A8D_wDesc_FP
		1756-OB16D	raC_Dvc_1756-OB16D_wDesc_FP
1794	raC_Dvc_1794IO_wDesc.vpd	1794-OB16D	raC_Dvc_1794-OB16D_wDesc_FP
1715	raC_Dvc_1715IO_wDesc.vpd	1715-OB8DE	raC_Dvc_1715-OB8DE_Simplex_wDesc_FP
			raC_Dvc_1715-OB8DE_Duplex_wDesc_FP

## Studio 5000® Application Code Manager Files

Studio 5000® Application Code Manager (ACM) can be optionally used if it is installed. All devices can be easily registered in the ACM repositories by running the *setup.cmd* file located in the root folder of the library.

Individual HSL4 files are provided as an alternative to running the *setup.cmd* to allow users to manually register specific implementation objects. Each object has two files - an Asset Control file and a Device file. The Module files include attachments of all required files for that object.

All Studio 5000® Application Code Manager files can be found in the */ApplicationCodeManagerLibraries/* folder of the library. The files included are as follows:

Family	Module	Application Code Manager File
1756	1756-0A8D	(RA-LIB)_ACM_2.00_Module_Digital_1756-0A8D_(5.3).HSL4
	1756-OB16D	(RA-LIB)_ACM_2.00_Module_Digital_1756-OB16D_(5.3).HSL4
1794	1794-OB16D	(RA-LIB)_ACM_2.00_Module_Digital_1794-OB16D_A_(5.3).HSL4
1715	1715-OB8DE	(RA-LIB)_ACM_2.00_Module_Digital_1715-OB8DE_A_(5.3).HSL4
1732E	1732E-OB16M12DR	(RA-LIB)_ACM_2.00_Module_Digital_1732E-OB16M12DR_B_(5.4).HSL4

## Graphic Symbols

Graphic Symbols are used as launch buttons within HMI applications to open up faceplate displays. A generic rectangular pushbutton with a text label can be used, or a graphical style button with abnormal indicator icons can be used.

See [Basic Launch Button Attributes](#) section for details on configuration and indicators.

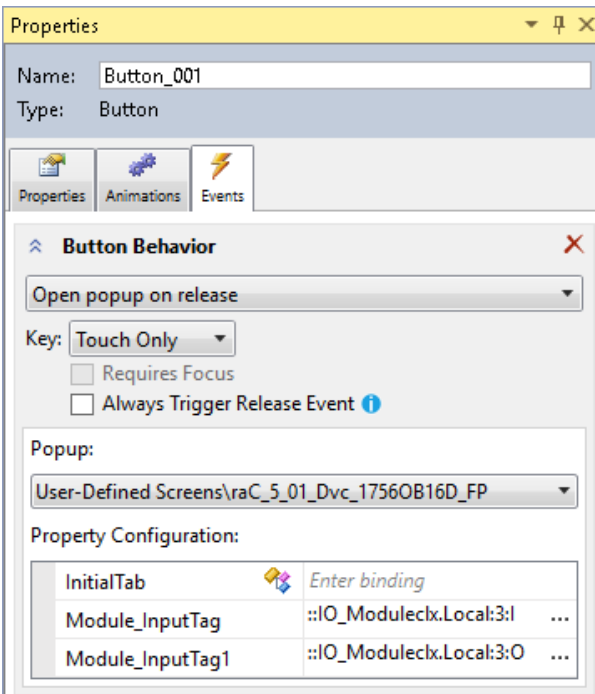

### FactoryTalk® View ME/SE Graphic Symbols

Graphic Symbol Name	Description	Global Object Parameter Values	Graphic Symbol
GO_GotoDisplay1	Faceplate navigation button with string tag label.	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #105: Custom button label. Leave blank to use Tag.@Description #120: Display's left position #121: Display's top position	
GO_LaunchDCOut_17xx	Use with 1715/1734/1756/1769 DC Output Modules	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #120: Display's left position #121: Display's top position	
GO_LaunchDCOut_50xx	Use with 1719/5069/5015 DC Output Modules	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #111: IO Class: Blank = Standard; 1= Safety #120: Display's left position #121: Display's top position	
GO_LaunchACOut_17xx	Use with 1715/1734/1756/1769 AC Output Modules	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #120: Display's left position #121: Display's top position

### Studio 5000 View Designer® Graphic Symbols

All Studio 5000 View Designer® graphic symbols must be configured with an *Event* to open up the appropriate Popup screen. Select the graphic symbol and in the *Properties* window navigate to the *Events* tab. Assign a *Button Behavior* event to *Open popup on release*. Assign the required Popup screen (e.g. User-Defined Screens\raC\_5\_02\_Dvc\_1756OB16D\_wDesc\_FP). The required *Property*

*Configurations* are found in the following table where you may assign an *InitialTab* to 11 to ensure the pop-up opens on the Home Tab, and assign the *Module\_InputTag* to the module's :I controller tag (e.g. ::PAC.Local:3:I) and *Module\_OutputTag* to the module's :O controller tag (e.g. ::PAC.Local:3:O).

Graphic Symbol Name	Description	Properties - Events Configuration	Graphic Symbol
Button_001	Faceplate navigation button with string tag label. Use Properties > General > Text to modify the button label text.	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag

## Faceplates

There are basic faceplate attributes that are common across all instructions. See [Basic Faceplate Attributes](#) for more information.

In this document, the faceplate pictures (or snapshots) are shown in FactoryTalk® View ME. Faceplates will look similar in FactoryTalk® View SE or Studio 5000 View Designer®. Number of I/O channels and minor details may vary depending on the exact I/O module.

The faceplate title is linked to *Module:I.@description*, the *.@description* extended tag property of the module's input tag instance. This is user-configurable from controller/program tags in Studio 5000 Logix Designer.

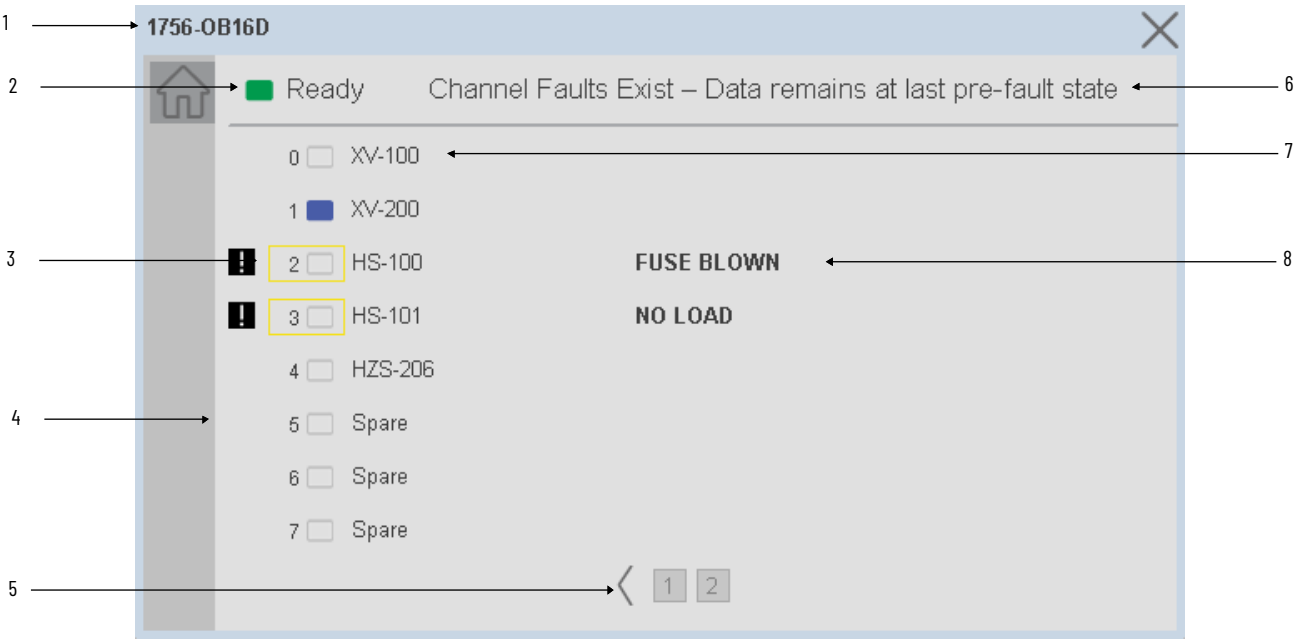

Name	Description	Data Type
▶ R1756:2:I	1756-SOE	AB:1756_SOE_16PointCIPSync:I:0
▶ R1756:2:C	1756-SOE	AB:1756_SOE:C:1
▶ R1756:7:I	1756-OF8H	AB:1756_OF8H_AnalogHARTbyChannel...
▶ R1756:11:I	1756-OF8	AB:1756_OF8_Float:I:0
▶ R1756:6:I	1756-OBV8S Sourcing	AB:5000_SDO8:I:0
▶ R1756:10:I	1756-OB32	AB:1756_DO:I:0
▶ R1756:5:I	1756-OB16D	AB:1756_DO_DC_Diag:I:0
▶ R1756:4:I	1756-IF16H	AB:1756_IF16H_AnalogHARTbyChannel...
▶ R1756:9:I	1756-IF8	AB:1756_IF8_Float:I:0
▶ R1756:8:I	1756-IB32	AB:1756_DI:I:0

The I/O channel descriptions are linked to the channel's primary data tag *.@Description* field. For Digital Output modules this is the individual O.Data.x BOOL tags. Failure to fill in these tags will result in HMI diagnostic errors. These tags can be filled out using Studio 5000 Application Code Manager.

Name	Description	Data Type
▲ R1756:10:I	1756-OB32	AB:1756_DO:I:0
▶ R1756:10:I.Fault	1756-OB32	DINT
▲ R1756:10:I.Data	1756-OB32	DINT
R1756:10:I.Data.0	XVC-100	BOOL
R1756:10:I.Data.1	XVO-100	BOOL
R1756:10:I.Data.2	XVC-101	BOOL
R1756:10:I.Data.3	XVO-101	BOOL
R1756:10:I.Data.4	USD-305	BOOL
R1756:10:I.Data.5	Spare	BOOL
R1756:10:I.Data.6	Spare	BOOL

Home

The Home tab is the main tab of the faceplate. I/O channel data and fault information. The banner at the top of the faceplate displays module status and fault information.

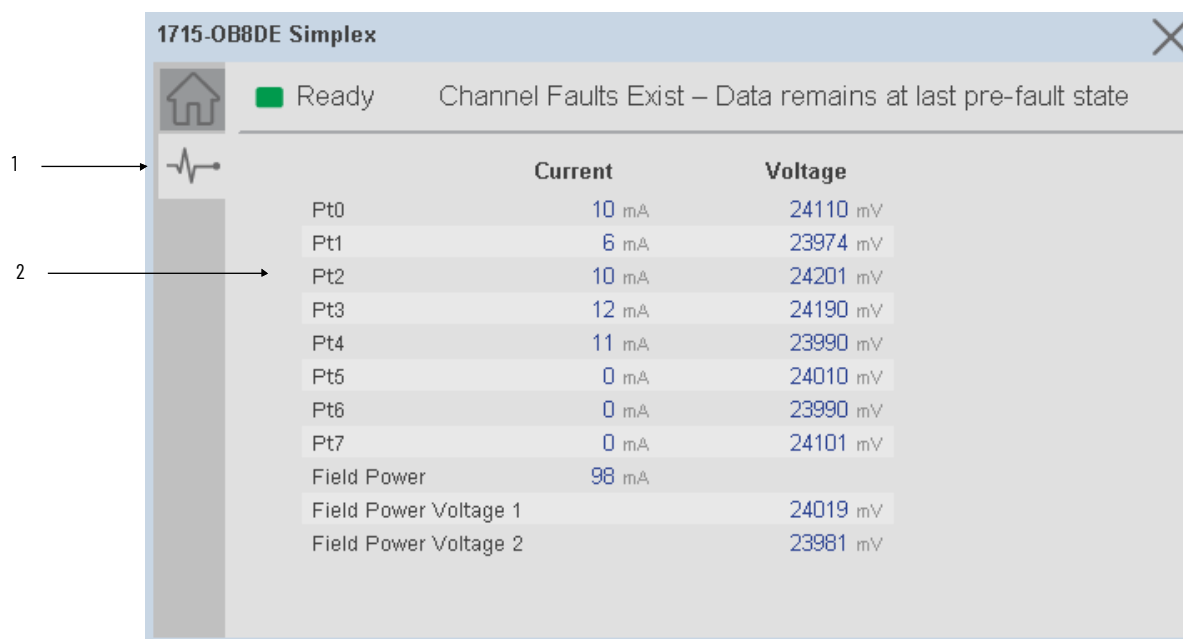

Item	Description
1	Faceplate title bar. Display's Module:I.@Description
2	Module ready status.
	GREEN = Ready  Ready
	YELLOW = Module Fault/Not Ready  Not Ready

Item	Description	
3	Channel Status	
	BLUE = Active/High	
	GREY = Inactive/Low	
4	Channel Fault Indication. "!" icon and yellow border.	
5	Page navigation; used for modules with more than 16 channels.	
6	Module/Channel Fault status text. May display the following: - Module Fault - All Channel Data remains at last pre-fault state - Channel Fault Exists - Data remains at last pre-fault state	
7	Channel description. Module:0.Data.x.@Description	
8	Channel fault description - Output Verify Fault (1756/1794 only) - Field Power Loss (1756/1794 only) - Fuse Blown (1756/1794 only) - No Load - Channel Fault - Short Circuit (1715 only)	

## Diagnostic Tab

The Diagnostic tab is available only for 1715-OB8DE diagnostic modules. This tab displays current and voltage data for each point and the field power sources.

Item	Description
1	Diagnostic tab navigation button
2	Current (mA) and Voltage (mV) data.

## Application Code Manager

The IO Device Library can be used with Studio 5000® Application Code Manager to configure all required I/O for a project. All I/O modules can be found in the (RA-LIB) ACM 2.00 Library within the *Module* folder.

Refer to the section [Using Application Code Manager](#) for complete details.

Module Object Parameters

Each module object (e.g. 1756-OB16D) has parameters which can be configured in Studio 5000® Application Code Manager prior to Controller code generation.

Parameter Name	Default Value	Description
ChxDescription		Channel tag description used in Module:0.Data.x.@Description tag and shown on HMI faceplates.
FPLaunch_Button_Label	[ModuleName]	Module:I.@Description tag and shown on basic text launch buttons.
SEAssocDisplay		Associated HMI SE Display
MEAssocDisplay		Associated HMI ME Display
Slot	Next Available	This is the slot that this module is located in.
RPI	20	This is the RPI of the module (ms).
ChassisName	[ChassisName]	This is the Chassis that this module is located in.
NavigationButton	GraphicalButton	Select Navigation Button Type

Configured HMI Content

HMI Content	Instance Name	Description

## Digital Input/Output 17x4 Rack Optimized Modules

### Overview

Digital Input/Output 1734/1794 Rack Optimized module objects include Studio 5000® Application Code Manager modules and HMI faceplates for FactoryTalk® View ME/SE and Studio 5000 View Designer®.

These faceplates apply to 1734 POINT I/O and 1794 FLEX I/O modules configured as Rack Optimized connection mode. This simplifies the tag's data structure and does not include any diagnostic information. For modules configured as data connection mode, see the other sections that cover [Digital Input Modules](#) or [Digital Output Modules](#).

HMI faceplates provide the following information:

- Module description
- Channel status and description

Faceplates for rack optimized digital input/output modules are provided based on I/O density (2/4/8/16/32 channel). The faceplates can be used with either 1734 or 1794 modules and either input or output modules as long as the channel density is correct.

### Required Files

IO Device Objects include HMI faceplates. There is no controller programming required other than the creation of the I/O module in the project. If using FactoryTalk® View ME/SE you must also import the tag import file *FTViewStudio\_IOLibrary\_Tags\_5\_00.CSV* to support navigation on faceplates with multiple tabs or pages.

Note that the revision numbers (e.g. 5.01) used in filenames below can change as new revisions are created.

### FactoryTalk® View HMI Files

FactoryTalk® View ME/SE applications require importing the desired device faceplates in addition to all Global Object (ggfx) files and all images located in the */HMI FactoryTalk® View Images - png/* folder of the library. FactoryTalk® View ME files are stored in the */HMI - FactoryTalk View ME/* library folder and FactoryTalk® View SE files are stored in the */HMI - FactoryTalk View SE/* library folder.

Studio 5000 View Designer HMI Files

All Studio 5000 View Designer Files can be found in the /HMI - ViewDesigner - vpd/ folder of the library. Each I/O family (e.g. 1756) has a single .VPD file which contains faceplate screens for all I/O modules in that family.

## Studio 5000® Application Code Manager Files

Studio 5000® Application Code Manager (ACM) can be optionally used if it is installed. All devices can be easily registered in the ACM repositories by running the *setup.cmd* file located in the root folder of the library.

Individual HSL4 files are provided as an alternative to running the *setup.cmd* to allow users to manually register specific implementation objects. Each object has two files - an Asset Control file and a Device file. The Module files include attachments of all required files for that object.

All Studio 5000® Application Code Manager files can be found in the / *ApplicationCodeManagerLibraries/* folder of the library. The files included are as follows:

Family	Module	Application Code Manager File
1734	1734-IB4D	(RA-LIB)_ACM_2.00_Module_Digital_1734-IB4D_C_(5.3).HSL4

## Graphic Symbols

Graphic Symbols are used as launch buttons within HMI applications to open up faceplate displays. A generic rectangular pushbutton with a text label can be used, or a graphical style button with abnormal indicator icons can be used. See [Basic Launch Button Attributes](#) section for details on configuration and indicators.

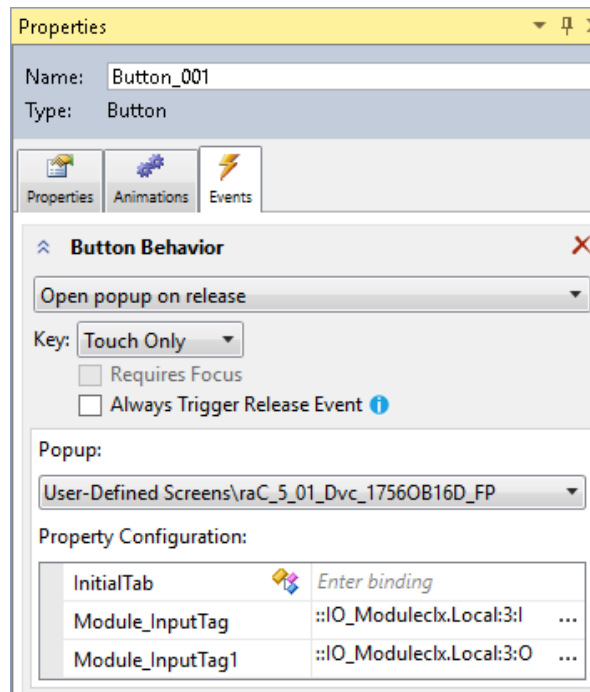

## FactoryTalk® View ME/SE Graphic Symbols

Graphic Symbol Name	Description	Global Object Parameter Values	Graphic Symbol
GO_GotoDisplay	Use with 1734/1794 Rack Optimized.	#102: Faceplate Display Name #103: IO Module Input Tag #105: Custom button label. Leave blank to use Tag.@Description #120: Display's left position #121: Display's top position	
GO_LaunchDCIn_17xx	Use with 1715/1734/1756/1769 DC Input Modules	#102: Faceplate Display Name #103: IO Module Input Tag #120: Display's left position #121: Display's top position	
GO_LaunchACIn_17xx	Use with 1715/1734/1756/1769 AC Input Modules	#102: Faceplate Display Name #103: IO Module Input Tag #120: Display's left position #121: Display's top position	
GO_Launch_DCIn_1794	Use with 1794 DC Input Modules	#102: Faceplate Display Name #103: IO Module Input Tag #120: Display's left position #121: Display's top position	
GO_LaunchACIn_1794	Use with 1794 AC Input Modules	#102: Faceplate Display Name #103: IO Module Input Tag #120: Display's left position #121: Display's top position	
GO_LaunchDCOut_17xx	Use with 1715/1734/1756/1769 DC Output Modules	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #120: Display's left position #121: Display's top position	
GO_LaunchACOut_17xx	Use with 1715/1734/1756/1769 AC Output Modules	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #120: Display's left position #121: Display's top position	
GO_Launch_DCOut_1794	Use with 1794 DC Input/ Output Modules	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #120: Display's left position #121: Display's top position	
	Use with 1794 DC Output Modules	#102: Faceplate Display Name #103: IO Module Output Tag #120: Display's left position #121: Display's top position	
GO_LaunchACOut_1794	Use with 1794 AC Output Modules	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #120: Display's left position #121: Display's top position	

Graphic Symbol Name	Description	Global Object Parameter Values	Graphic Symbol
GO_LaunchACIn_1734_Rack	Use with 1734 AC Input Modules	#102: Faceplate Display Name #103: IO Module Input Tag #120: Display's left position #121: Display's top position	
GO_LaunchDCIn_1734_Rack	Use with 1734 DC Input Modules	#102: Faceplate Display Name #103: IO Module Input Tag #120: Display's left position #121: Display's top position	
GO_LaunchACOut_1734_Rack	Use with 1734 AC Output Modules	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #120: Display's left position #121: Display's top position	
GO_LaunchDCOut_1734_Rack	Use with 1734 DC Output Modules	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #120: Display's left position #121: Display's top position	
GO_LaunchACIn_1794_Rack	Use with 1794 AC Input Modules	#102: Faceplate Display Name #103: IO Module Input Tag #120: Display's left position #121: Display's top position	
GO_LaunchDCIn_1794_Rack	Use with 1794 DC Input Modules	#102: Faceplate Display Name #103: IO Module Input Tag #120: Display's left position #121: Display's top position	
GO_LaunchACOut_1794_Rack	Use with 1794 AC Output Modules	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #120: Display's left position #121: Display's top position	
GO_LaunchDCOut_1794_Rack	Use with 1794 AC Output Modules	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #120: Display's left position #121: Display's top position	

## Studio 5000 View Designer® Graphic Symbols

All Studio 5000 View Designer® graphic symbols must be configured with an *Event* to open up the appropriate Popup screen. Select the graphic symbol and in the *Properties* window navigate to the *Events* tab. Assign a *Button Behavior* event to *Open popup on release*. Assign the required Popup screen (e.g. User-Defined Screens\raC\_5\_02\_Dvc\_1756OB16D\_wDesc\_FP). The required *Property Configurations* are found in the following table where you may assign an *InitialTab* to 11 to ensure the pop-up opens on the Home Tab, and assign the *Module\_InputTag* to the module's :I controller tag (e.g. ::PAC.Local:3:I) and *Module\_OutputTag* to the module's :O controller tag (e.g. ::PAC.Local:3:O).

Graphic Symbol Name	Description	Properties - Events Configuration	Graphic Symbol
Button_001	Faceplate navigation button with string tag label. Use Properties > General > Text to modify the button label text.	InitialTab: 11 Module_InputTag: IO Module Input Tag	
G0_LaunchDCIn_17xx	Use with 1715/1734/1756/1769 DC Input Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	
G0_LaunchACIn_17xx	Use with 1715/1734/1756/1769 AC Input Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	

Graphic Symbol Name	Description	Properties - Events Configuration	Graphic Symbol
GO_Launch_DCIn_1794	Use with 1794 DC Input Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_Launch_ACIn_1794	Use with 1794 AC Input Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_Launch_DCOut_17xx	Use with 1715/1734/1756/1769 DC Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_Launch_ACOut_17xx	Use with 1715/1734/1756/1769 AC Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_Launch_DCOut_1794	Use with 1794 DC Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_Launch_ACOut_1794	Use with 1794 AC Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	

## Faceplates

There are basic faceplate attributes that are common across all instructions. See [Basic Faceplate Attributes on page 40](#).

In this document, the faceplate pictures (or snapshots) are shown in FactoryTalk® View ME. Faceplates will look similar in FactoryTalk® View SE or Studio 5000 View Designer®. Number of I/O channels and minor details may vary depending on the exact I/O module.

The faceplate title is linked to *Module:I.@description*, the *.@description* extended tag property of the module's input tag instance. This is user-configurable from controller/program tags in Studio 5000 Logix Designer.

Name	Description	Data Type
▶ R1756:2:I	1756-SOE	AB:1756_SOE_16PointCIPSync:I:0
▶ R1756:2:C	1756-SOE	AB:1756_SOE:C:1
▶ R1756:7:I	1756-OF8H	AB:1756_OF8H_AnalogHARTbyChannel...
▶ R1756:11:I	1756-OF8	AB:1756_OF8_Float:I:0
▶ R1756:6:I	1756-OBV8S Sourcing	AB:5000_SDO8:I:0
▶ R1756:10:I	1756-OB32	AB:1756_DO:I:0
▶ R1756:5:I	1756-OB16D	AB:1756_DO_DC_Diag:I:0
▶ R1756:4:I	1756-IF16H	AB:1756_IF16H_AnalogHARTbyChannel...
▶ R1756:9:I	1756-IF8	AB:1756_IF8_Float:I:0
▶ R1756:8:I	1756-IB32	AB:1756_DI:I:0

The I/O channel descriptions are linked to the channel's primary data tag *.@Description* field. For Digital Input modules this is the individual I.Data.x BOOL tags. Failure to fill in these tags will result in HMI diagnostic errors. These tags can be filled out using Studio 5000 Application Code Manager.

Name	Description	Data Type
▲ R1756:8:I	1756-IB32	AB:1756_DI:I:0
▶ R1756:8:I.Fault	1756-IB32	DINT
▲ R1756:8:I.Data	1756-IB32	DINT
R1756:8:I.Data.0	PB-201	BOOL
R1756:8:I.Data.1	PB-202	BOOL
R1756:8:I.Data.2	PB-203	BOOL
R1756:8:I.Data.3	LSL-300	BOOL
R1756:8:I.Data.4	LSH-300	BOOL
R1756:8:I.Data.5	LSHH-300	BOOL

## Home

The Home tab is the main tab of the faceplate. I/O channel data and fault information. The banner at the top of the faceplate displays module status and fault information.

Item	Description
1	Faceplate title bar. Display's Module:I.@Description
2	Channel Status
	BLUE = Active/High
	GREY = Inactive/Low
3	Page navigation; used for modules with more than 16 channels.
4	Channel description. Module:I.Data.x.@Description

Application Code Manager

The IO Device Library can be used with Studio 5000® Application Code Manager to configure all required I/O for a project. All I/O modules can be found in the (RA-LIB) ACM 2.00 Library within the *Module* folder.

Refer to the section [Using Application Code Manager](#) for complete details.

Module Object Parameters

Each module object (e.g. 1734-OB8) has parameters which can be configured in Studio 5000® Application Code Manager prior to Controller code generation.

Parameter Name	Default Value	Description
ChxDescription		Channel tag description used in Module:I.Data.x.@Description tag and shown on HMI faceplates.
FPLaunch_Button_Label	[ModuleName]	Module:I.@Description tag and shown on basic text launch buttons.
SEAssocDisplay		Associated HMI SE Display
MEAssocDisplay		Associated HMI ME Display
Slot	Next Available	This is the slot that this module is located in.
RPI	20	This is the RPI of the module (ms).
ChassisName	[ChassisName]	This is the Chassis that this module is located in.
Connection	Data	Connection type: - Data - RackOptimized
NavigationButton	GraphicalButton	Select Navigation Button Type

## Configured HMI Content

HMI Content	Instance Name	Description
Launch Button	GO_LaunchFP	Global Object generic rectangular text launch button
Launch Button	GO_LaunchDCIn_17xx	Use with 1715/1734/1756/1769 DC Input Modules
Launch Button	GO_LaunchACIn_17xx	Use with 1715/1734/1756/1769 AC Input Modules
Launch Button	GO_Launch_DCIn_1794	Use with 1794 DC Input Modules
Launch Button	GO_LaunchACIn_1794	Use with 1794 AC Input Modules
Launch Button	GO_LaunchDCOut_17xx	Use with 1715/1734/1756/1769 DC Output Modules
Launch Button	GO_LaunchACOut_17xx	Use with 1715/1734/1756/1769 AC Output Modules
Launch Button	GO_Launch_DCOut_1794	Use with 1794 DC Output Modules

## Analog Input Modules

### Overview

Analog input module objects include Studio 5000® Application Code Manager modules and HMI faceplates for FactoryTalk® View ME/SE and Studio 5000 View Designer®. HMI faceplates provide the following information:

- Module description, status, and faults
- Channel description, data and faults

### Required Files

IO Device Objects include HMI faceplates. There is no controller programming required other than the creation of the I/O module in the project. If using FactoryTalk® View ME/SE you must also import the tag import file *FTViewStudio\_IOLibrary\_Tags\_5\_00.CSV* to support navigation on faceplates with multiple tabs or pages.

Note that the revision numbers (e.g. 5.01) used in filenames below can change as new revisions are created.

### FactoryTalk® View HMI Files

FactoryTalk® View ME/SE applications require importing the desired device faceplates in addition to all Global Object (ggfx) files and all images located in the */HMI FactoryTalk® View Images - png/* folder of the library. FactoryTalk® View ME files are stored in the */HMI - FactoryTalk View ME/* library folder and FactoryTalk® View SE files are stored in the */HMI - FactoryTalk View SE/* library folder.

#### *GGFX Global Object Files*

## Studio 5000 View Designer HMI Files

All Studio 5000 View Designer Files can be found in the */HMI - ViewDesigner - vpd/* folder of the library. Each I/O family (e.g. 1756) has a single .VPD file which contains faceplate screens for all I/O modules in that family.

Family	View Designer File	Module	View Designer Screen
1715	raC_Dvc_1715IO_wDesc.vpd	1715-IF16	raC_Dvc_1715-IF16_Simplex_wDesc_FP
1719	raC_Dvc_1719IO_wDesc.vpd	1719-IR4B	raC_Dvc_1719-IR4B_wDesc_FP

## Studio 5000® Application Code Manager Files

Studio 5000® Application Code Manager (ACM) can be optionally used if it is installed. All devices can be easily registered in the ACM repositories by running the *setup.cmd* file located in the root folder of the library.

Individual HSL4 files are provided as an alternative to running the *setup.cmd* to allow users to manually register specific implementation objects. Each object has two files - an Asset Control file and a Device file. The Module files include attachments of all required files for that object.

All Studio 5000® Application Code Manager files can be found in the / *ApplicationCodeManagerLibraries/* folder of the library. The files included are as follows:

Family	Module	Application Code Manager File
1715	1715-IF16	(RA-LIB)_ACM_2.00_Module_Analog_1715-IF16_A_(5.3).HSL4
1719	1719-IR4B	(RA-LIB)_ACM_2.00_Module_Analog_1719-IR4B_A_(5.3).HSL4

## Graphic Symbols

Graphic Symbols are used as launch buttons within HMI applications to open up faceplate displays. A generic rectangular pushbutton with a text label can be used, or a graphical style button with abnormal indicator icons can be used. See [Basic Launch Button Attributes](#) section for details on configuration and indicators.

### FactoryTalk® View ME/SE Graphic Symbols

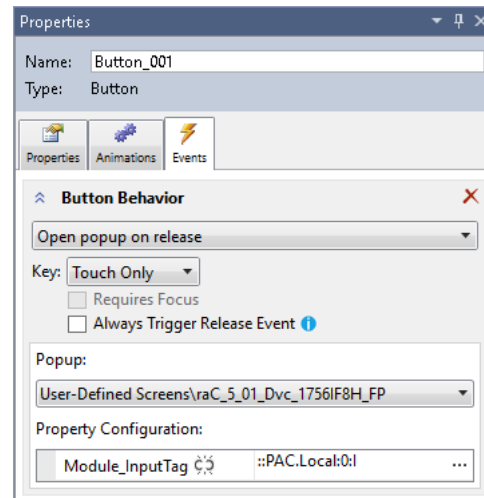

Graphic Symbol Name	Description	Global Object Parameter Values	Graphic Symbol
G0_GotoDisplay	Faceplate navigation button with string tag label.	#102: Faceplate Display Name #103: IO Module Input Tag #105: Custom button label. Leave blank to use Tag.@Description #120: Display's left position #121: Display's top position	

Graphic Symbol Name	Description	Global Object Parameter Values	Graphic Symbol
GO_LaunchAI_17xx	Use with 1715/1734/1769 Analog Input Modules	#102: Faceplate Display Name #103: IO Module Input Tag #120: Display's left position #121: Display's top position	
GO_LaunchAI_50xx	Use with 1719/5069/5015 Analog Input Modules	#102: Faceplate Display Name #103: IO Module Input Tag #111: IO Class: Blank = Standard; 1= Safety #120: Display's left position #121: Display's top position	
GO_Launch_AI_1756	Use with 1756 Standard Analog Input Modules	#102: Faceplate Display Name #103: IO Module Input Tag #120: Display's left position #121: Display's top position	
GO_Launch_AIHR_1756	Use with 1756 High-Resolution Analog Input Modules (-IF8I, -IRT8I, -IR12, -IT16)	#102: Faceplate Display Name #103: IO Module Input Tag #120: Display's left position #121: Display's top position	
GO_Launch_AI_1794	Use with 1794 Analog Input Modules	#102: Faceplate Display Name #103: IO Module Input Tag #120: Display's left position #121: Display's top position	
GO_Launch_AI_5094	Use with 5094 Analog Input Modules	#102: Faceplate Display Name #103: IO Module Input Tag #111: IO Class: Blank = Standard; 1= Safety #120: Display's left position #121: Display's top position	
GO_LaunchIn_Armor	Use with 1732E/1738 Analog Input Only Modules	#102: Faceplate Display Name #103: IO Module Input Tag #105: Custom button label. Leave blank to use Tag.@Description #120: Display's left position #121: Display's top position	

## Studio 5000 View Designer® Graphic Symbols

All Studio 5000 View Designer® graphic symbols must be configured with an *Event* to open up the appropriate Popup screen. Select the graphic symbol and in the *Properties* window navigate to the *Events* tab. Assign a *Button Behavior* event to *Open popup on release*. Assign the required Popup screen (e.g. User-Defined Screens\raC\_5\_02\_Dvc\_1756OB16D\_wDesc\_FP). The required *Property Configurations* are found in the following table where you may assign an *InitialTab* to 11 to ensure the pop-up opens on the Home Tab, and assign the *Module\_InputTag* to the module's :I controller tag (e.g. ::PAC.Local:3:I).

Graphic Symbol Name	Description	Properties - Events Configuration	Graphic Symbol
Button_001	Faceplate navigation button with string tag label. Use Properties > General > Text to modify the button label text.	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_LaunchAI_17xx	Use with 1715/1734/1769 Analog Input Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_LaunchAI_50xx	Use with 1719/5069/5015 Analog Input Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_Launch_AI_1756	Use with 1756 Standard Analog Input Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_Launch_AIHR_1756	Use with 1756 High-Resolution Analog Input Modules (-IF8I, -IRT8I, -IRT12, -IRT16)	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_Launch_AI_1794	Use with 1794 Analog Input Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_Launch_AI_5094	Use with 5094 Analog Input Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_LaunchIn_Armor	Use with 1732E/1738 Analog Input Only Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	

## Faceplates

There are basic faceplate attributes that are common across all instructions. See [Basic Faceplate Attributes on page 40](#).

In this document, the faceplate pictures (or snapshots) are shown in FactoryTalk® View ME. Faceplates will look similar in FactoryTalk® View SE or Studio 5000 View Designer®. Number of I/O channels and minor details may vary depending on the exact I/O module.

The faceplate title is linked to *Module:I.@description*, the *.@description* extended tag property of the module's input tag instance. This is user-configurable from controller/program tags in Studio 5000 Logix Designer.

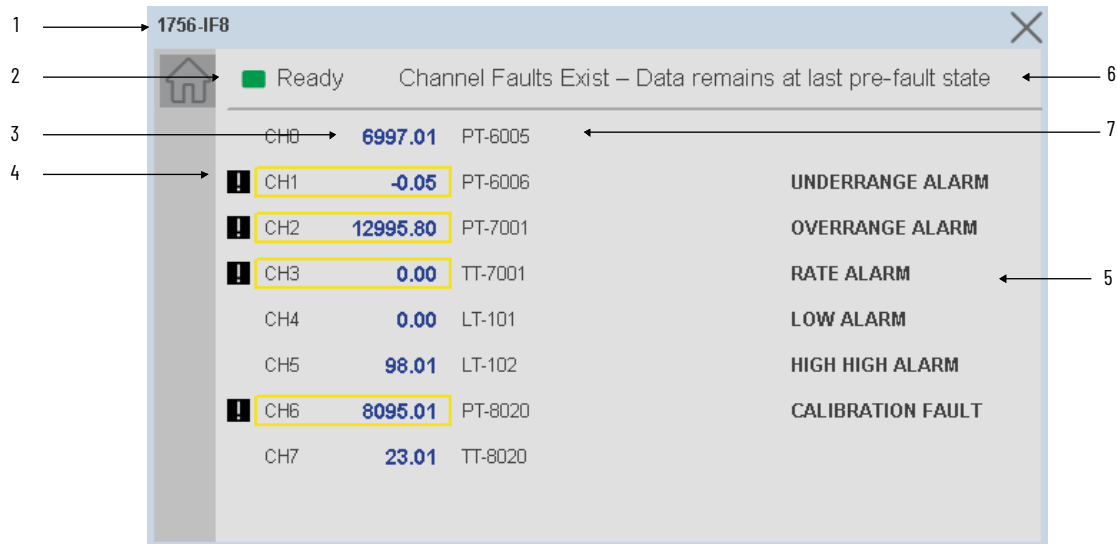

Name	Description	Data Type
▶ R1756:2:I	1756-SOE	AB:1756_SOE_16PointCIPSync:I:0
▶ R1756:2:C	1756-SOE	AB:1756_SOE:C:1
▶ R1756:7:I	1756-OF8H	AB:1756_OF8H_AnalogHARTbyChannel...
▶ R1756:11:I	1756-OF8	AB:1756_OF8_Float:I:0
▶ R1756:6:I	1756-OBV8S Sourcing	AB:5000_SDO8:I:0
▶ R1756:10:I	1756-OB32	AB:1756_DO:I:0
▶ R1756:5:I	1756-OB16D	AB:1756_DO_DC_Diag:I:0
▶ R1756:4:I	1756-IF16H	AB:1756_IF16H_AnalogHARTbyChannel...
▶ R1756:9:I	1756-IF8	AB:1756_IF8_Float:I:0
▶ R1756:8:I	1756-IB32	AB:1756_DI:I:0

The I/O channel descriptions are linked to the channel's primary data tag *.@Description* field. For Analog Input modules this is the individual *I.ChxData* REAL tags. Failure to fill in these tags will result in HMI diagnostic errors. These tags can be filled out using Studio 5000 Application Code Manager.

R1756:9:I.Ch0Data	PT-6005	REAL
R1756:9:I.Ch1Data	PT-6006	REAL
R1756:9:I.Ch2Data	PT-7001	REAL
R1756:9:I.Ch3Data	TT-7001	REAL
R1756:9:I.Ch4Data	LT-101	REAL
R1756:9:I.Ch5Data	LT-102	REAL
R1756:9:I.Ch6Data	PT-8020	REAL
R1756:9:I.Ch7Data	TT-8020	REAL

Home

The Home tab is the main tab of the faceplate. I/O channel data and fault information. The banner at the top of the faceplate displays module status and fault information.

Item	Description
1	Faceplate title bar. Display's Module:I.@Description
2	Module ready status.
	GREEN = Ready  Ready
	YELLOW = Module Fault/Not Ready  Not Ready
3	Channel Data
4	Channel Fault Indication. "!" icon and yellow border.
5	Channel Fault Type: <ul style="list-style-type: none"> <li>- Rate Alarm</li> <li>- Overrange Alarm</li> <li>- Underrange Alarm</li> <li>- Calibration Fault</li> <li>- High High Alarm</li> <li>- High Alarm</li> <li>- Low Alarm</li> <li>- Low Low Alarm</li> </ul>
6	Module/Channel Fault status text. May display the following: <ul style="list-style-type: none"> <li>- Module Fault - All Channel Data remains at last pre-fault state</li> <li>- Channel Fault Exists - Data remains at last pre-fault state</li> </ul>
7	Channel description. Module:I.Data.x.@Description

## Application Code Manager

The IO Device Library can be used with Studio 5000® Application Code Manager to configure all required I/O for a project. All I/O modules can be found in the (RA-LIB) ACM 2.00 Library within the *Module* folder.

Refer to the section [Using Application Code Manager](#) for complete details.

Module Object Parameters

Each module object (e.g. 1756-IF8I) has parameters which can be configured in Studio 5000® Application Code Manager prior to Controller code generation.

Parameter Name	Default Value	Description
ChxDescription		Channel tag description used in Module:I.Data.x.@Description tag and shown on HMI faceplates.
FPLaunch_Button_Label	[ModuleName]	Module:I.@Description tag and shown on basic text launch buttons.
SEAssocDisplay		Associated HMI SE Display
MEAssocDisplay		Associated HMI ME Display
Slot	Next Available	This is the slot that this module is located in.
RPI	20	This is the RPI of the module (ms).
ChassisName	[ChassisName]	This is the Chassis that this module is located in.
InputRange		Sets the input Range type of the channels. 0=-10 to 10V, 1= 0 to 5 V, 2= 0 to 10V , 3= 0 to 20ma
OverrideDefaults	False	User can modify the HVL Signal and HVL Engineering values for the channels

Configured HMI Content

HMI Content	Instance Name	Description
Launch Button	GO_LaunchFP	Global Object generic rectangular text launch button
Launch Button	GO_LaunchAI_17xx	Use with 1715/1734/1769 Analog Input Modules
Launch Button	GO_LaunchAI_50xx	Use with 1719/5069/5015 Analog Input Modules
Launch Button	GO_Launch_AI_1756	Use with 1756 Standard Analog Input Modules
Launch Button	GO_Launch_AIHR_1756	Use with 1756 High-Resolution Analog Input Modules (-IF8I, -IRT8I, -IRT2, -IT16)
Launch Button	GO_Launch_AI_1794	Use with 1794 Analog Input Modules
Launch Button	GO_Launch_AI_5094	Use with 5094 Analog Input Modules
Launch Button	GO_LaunchIn_Armor	Use with 1732E/1738 Analog Input Only Modules

## Analog Input with HART Modules

### Overview

Analog input with HART module objects include Studio 5000® Application Code Manager modules and HMI faceplates for FactoryTalk® View ME/SE and Studio 5000 View Designer®. HMI faceplates provide the following information:

- Module description, status, and faults
- Channel description, data and faults
- HART multi-variable data and diagnostics

Note that 5094 HART modules have two modes:

- HART
- PlantPax HART

Use the PlantPax® faceplate and Application Code Manager configuration in PlantPax® applications for use with the PlantPax® Process Object Library.

### Required Files

IO Device Objects include HMI faceplates. There is no controller programming required other than the creation of the I/O module in the project. If using FactoryTalk® View ME/SE you must also import the tag import file *FTViewStudio\_IOLibrary\_Tags\_5\_00.CSV* to support navigation on faceplates with multiple tabs or pages.

Note that the revision numbers (e.g. 5.01) used in filenames below can change as new revisions are created.

### FactoryTalk® View HMI Files

FactoryTalk® View ME/SE applications require importing the desired device faceplates in addition to all Global Object (ggfx) files and all images located in the */HMI FactoryTalk® View Images - png/* folder of the library. FactoryTalk® View ME files are stored in the */HMI - FactoryTalk View ME/* library folder and FactoryTalk® View SE files are stored in the */HMI - FactoryTalk View SE/* library folder.

#### GGFX Global Object Files

## Studio 5000 View Designer HMI Files

All Studio 5000 View Designer Files can be found in the */HMI - ViewDesigner - vpd/* folder of the library. Each I/O family (e.g. 1756) has a single .VPD file which contains faceplate screens for all I/O modules in that family.

Family	Module	View Designer File	View Designer Screen
1715	1715-IF16	raC_Dvc_1715IO_wDesc.vpd	raC_Dvc_1715-IF16_HARTSimplex_wDesc_FP

			raC_Dvc_1794_IF8IHNF_wDesc_FP
5094	5094-IF8IH	raC_Dvc_5094IO_wDesc.vpd	raC_Dvc_5094-IF8IH_HART_wDesc_FP
			raC_Dvc_5094-IF8IH_PlantPAx_wDesc_FP
5069	5069-IF4IH	raC_Dvc_5069IO_wDesc.vpd	raC_Dvc_5069_IF4IH_HART_wDesc_FP
			raC_Dvc_5069_IF4IH_PlantPAx_wDesc_FP

## Studio 5000® Application Code Manager Files

Studio 5000® Application Code Manager (ACM) can be optionally used if it is installed. All devices can be easily registered in the ACM repositories by running the *setup.cmd* file located in the root folder of the library.

Individual HSL4 files are provided as an alternative to running the *setup.cmd* to allow users to manually register specific implementation objects. Each object has two files - an Asset Control file and a Device file. The Module files include attachments of all required files for that object.

All Studio 5000® Application Code Manager files can be found in the / *ApplicationCodeManagerLibraries/* folder of the library. The files included are as follows:

Family	Module	Application Code Manager File
1715	1715-IF16	(RA-LIB)_ACM_2.00_Module_Analog_1715-IF16_B_(5.3).HSL4
1756	1756-IF16H	(RA-LIB)_ACM_2.00_Module_Analog_1756-IF16H_A_(5.3).HSL4
	1756-IF16IH	(RA-LIB)_ACM_2.00_Module_Analog_1756-IF16IH_A_(5.3).HSL4
	1756-IF8IH	(RA-LIB)_ACM_2.00_Module_Analog_1756-IF8IH_A_(5.3).HSL4
	1756-IF8H	(RA-LIB)_ACM_2.00_Module_Analog_1756-IF8H_A_(5.3).HSL4
	1756-IF8IH	(RA-LIB)_ACM_2.00_Module_Analog_1756-IF8IH_A_(5.3).HSL4
1769	1769sc-IF4IH	(RA-LIB)_ACM_2.00_Module_Analog_1769sc-IF4IH_A_(5.3).HSL4
1794	1794-IF8IH	(RA-LIB)_ACM_2.00_Module_Analog_1794-IF8IH_A_(5.3).HSL4
	1794-IF8IHNF	(RA-LIB)_ACM_2.00_Module_Analog_1794-IF8IHNF_A_(5.3).HSL4
5094	5094-IF8IH	(RA-LIB)_ACM_2.00_Module_Analog_5094-IF8IH_A_(5.4).HSL4
	5094-IF8IHXT	(RA-LIB)_ACM_2.00_Module_Analog_5094-IF8IHXT_A_(5.4).HSL4
5069	5069-IF4IH	(RA-LIB)_ACM_2.00_Module_Analog_5069-IF4IH_A_(5.4).HSL4
	5069-IF4IHXT	(RA-LIB)_ACM_2.00_Module_Analog_5069-IF4IHXT_A_(5.4).HSL4

## Graphic Symbols

Graphic Symbols are used as launch buttons within HMI applications to open up faceplate displays. A generic rectangular pushbutton with a text label can be used, or a graphical style button with abnormal indicator icons can be used. See [Basic Launch Button Attributes](#) section for details on configuration and indicators.

Note:- If you are not utilizing all the channels of 5094-IF8IH/5069-IF4IH, you should follow the steps below for the unused channels.

Step:-1

The Dummy\_HART tag should be created in the controller scope and the data type should be the same as the Hart module.

▶ HART_1:I	{...}	{...}	AB:5000_HART4:I:0
▶ HART_1:O	{...}	{...}	AB:5000_HART:O:0
▶ HART_2:I	{...}	{...}	AB:5000_HART4:I:0
▶ HART_2:O	{...}	{...}	AB:5000_HART:O:0
▶ Dummy_HART	{...}	{...}	AB:5000_HART4:I:0

Step:-2

Whenever a channel is used for a Hart module, it must have a tag description. If the Hart module is not present on any one of the channel, you need to specify “Unused” in the channel description.e.g. If HART module is not used on channel no. 02 then add AENTR\_5094:1:I.Cho2.Data.@Description = Unused.

▲ AENTR_5094:1:I	{...}	{...}		AB:5000_...	5094-IF8IH
▷ AENTR_5094:1:I.Ch00	{...}	{...}		CHANNE...	5094-IF8IH
▷ AENTR_5094:1:I.Ch01	{...}	{...}		CHANNE...	5094-IF8IH
▲ AENTR_5094:1:I.Ch02	{...}	{...}		CHANNE...	5094-IF8IH
AENTR_5094:1:I.Ch02.CalFault	0	Deci...	BOOL		5094-IF8IH
AENTR_5094:1:I.Ch02.Calibrating	0	Deci...	BOOL		5094-IF8IH
AENTR_5094:1:I.Ch02.Data	0.0	Float	REAL	Unused	
AENTR_5094:1:I.Ch02.Fault	0	Deci...	BOOL		5094-IF8IH
AENTR_5094:1:I.Ch02.FieldPowerOff	0	Deci...	BOOL		5094-IF8IH
AENTR_5094:1:I.Ch02.HAlarm	0	Deci...	BOOL		5094-IF8IH
AENTR_5094:1:I.Ch02.HHAlarm	0	Deci...	BOOL		5094-IF8IH
AENTR_5094:1:I.Ch02.LAlarm	0	Deci...	BOOL		5094-IF8IH
AENTR_5094:1:I.Ch02.LLAlarm	0	Deci...	BOOL		5094-IF8IH

Step:-3

In the example below, Channels 0 and 1 are utilized for HART devices, hence we are passing HART device tags. Channels 2 to 7, however, remain unused, so we are passing Dummy\_HART tags for those channels.

Name	Value	Tag	Description
#102	(raC-5_02-ME) raC_Dvc_5094_IF8IH_HART-Faceplate	...	Faceplate Display Name e.g. (raC-5_00-ME) raC_Dvc_XXXX_XXXX-Faceplate
#103	{::[PAC]AENTR_5094:1:I}	...	IO Module Input Tag e.g. {::[Topic Name]Local:1:I}
#105	{::[PAC]Hart_1:1:I}	...	Channel 0 HART/PlantPax Input Tag, If channel is unused, add {::[Topic Name]Dummy_Hart} tag}
#106	{::[PAC]Hart_2:1:I}	...	Channel 1 HART/PlantPax Input Tag, If channel is unused, add {::[Topic Name]Dummy_Hart} tag}
#107	{::[PAC]Dummy_HART}	...	Channel 2 HART/PlantPax Input Tag, If channel is unused, add {::[Topic Name]Dummy_Hart} tag}
#108	{::[PAC]Dummy_HART}	...	Channel 3 HART/PlantPax Input Tag, If channel is unused, add {::[Topic Name]Dummy_Hart} tag}
#109	{::[PAC]Dummy_HART}	...	Channel 4 HART/PlantPax Input Tag, If channel is unused, add {::[Topic Name]Dummy_Hart} tag}
#110	{::[PAC]Dummy_HART}	...	Channel 5 HART/PlantPax Input Tag, If channel is unused, add {::[Topic Name]Dummy_Hart} tag}
#111	{::[PAC]Dummy_HART}	...	Channel 6 HART/PlantPax Input Tag, If channel is unused, add {::[Topic Name]Dummy_Hart} tag}
#112	{::[PAC]Dummy_HART}	...	Channel 7 HART/PlantPax Input Tag, If channel is unused, add {::[Topic Name]Dummy_Hart} tag}
#155	5094-IF8IH	...	Custom button Label. Leave blank to use tag.@description
#120		...	Display's left position (e.g. 100)
#121		...	Display's top position (e.g. 100)

## FactoryTalk® View ME/SE Graphic Symbols

## Studio 5000 View Designer® Graphic Symbols

All Studio 5000 View Designer® graphic symbols must be configured with an *Event* to open up the appropriate Popup screen. Select the graphic symbol and in the *Properties* window navigate to the *Events* tab. Assign a *Button Behavior* event to *Open popup on release*. Assign the required Popup screen (e.g. User-Defined Screens\raC\_5\_02\_Dvc\_1756OB16D\_wDesc\_FP). The required *Property Configurations* are found in the following table where you may assign an *InitialTab* to 11 to ensure the pop-up opens on the Home Tab, and assign the *Module\_InputTag* to the module's :I controller tag (e.g. ::PAC.Local:3:I).

Graphic Symbol Name	Description	Properties - Events Configuration	Graphic Symbol
Button_001	Faceplate navigation button with string tag label. Use Properties > General > Text to modify the button label text.	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_LaunchAI_17xx	Use with 1715/1734/1769 Analog Input Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_LaunchAI_50xx	Use with 1719/5069/5015 Analog Input Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_Launch_AI_1756	Use with 1756 Standard Analog Input Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_Launch_AIHR_1756	Use with 1756 High-Resolution Analog Input Modules (-IF8I, -IRT8I, -IRT12, -IRT16)	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_LaunchAI_506xx	Use with 5069 Analog Input HART Modules (IF4IH, IF4IHXT)	InitialTab: 11 Channel_0_HART_PlantPax_Input_Tag: Channel 0 Input Tag Channel_1_HART_PlantPax_Input_Tag: Channel 1 Input Tag Channel_2_HART_PlantPax_Input_Tag: Channel 2 Input Tag Channel_3_HART_PlantPax_Input_Tag: Channel 3 Input Tag Module_InputTag: IO Module Input Tag	
GO_LaunchAO_509xx	Use with 5094 Analog Input HART Modules (IF8IH, IF8IHXT)	InitialTab: 11 Channel_0_HART_PlantPax_Input_Tag: Channel 0 Input Tag Channel_1_HART_PlantPax_Input_Tag: Channel 1 Input Tag Channel_2_HART_PlantPax_Input_Tag: Channel 2 Input Tag Channel_3_HART_PlantPax_Input_Tag: Channel 3 Input Tag Channel_4_HART_PlantPax_Input_Tag: Channel 4 Input Tag Channel_5_HART_PlantPax_Input_Tag: Channel 5 Input Tag Channel_6_HART_PlantPax_Input_Tag: Channel 6 Input Tag Channel_7_HART_PlantPax_Input_Tag: Channel 7 Input Tag Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_Launch_AI_1794	Use with 1794 Analog Input Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_Launch_AI_5094	Use with 5094 Analog Input Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	

## Faceplates

There are basic faceplate attributes that are common across all instructions. See [Basic Faceplate Attributes on page 40](#).

In this document, the faceplate pictures (or snapshots) are shown in FactoryTalk® View ME. Faceplates will look similar in FactoryTalk® View SE or Studio 5000 View Designer®. Number of I/O channels and minor details may vary depending on the exact I/O module.

The faceplate title is linked to *Module:I.@description*, the *.@description* extended tag property of the module's input tag instance. This is user-configurable from controller/program tags in Studio 5000 Logix Designer.

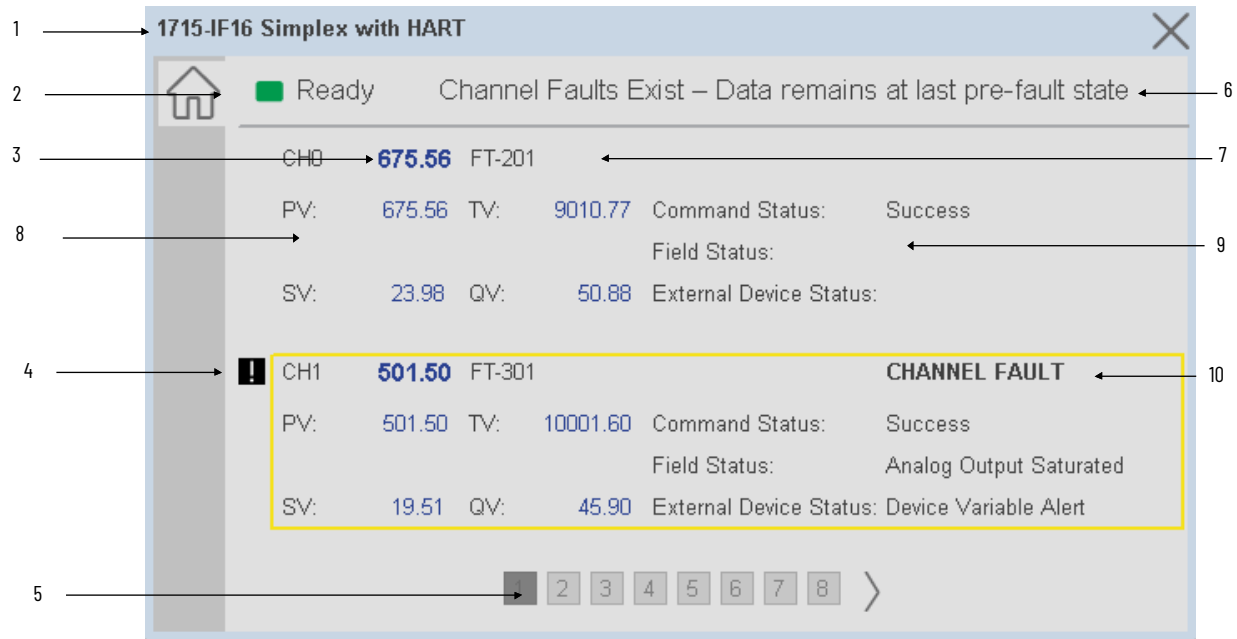

Name	Description	Data Type
▶ R1756:2:I	1756-SOE	AB:1756_SOE_16PointCIPSync:I:0
▶ R1756:2:C	1756-SOE	AB:1756_SOE:C:1
▶ R1756:7:I	1756-OF8H	AB:1756_OF8H_AnalogHARTbyChannel...
▶ R1756:11:I	1756-OF8	AB:1756_OF8_Float:I:0
▶ R1756:6:I	1756-OBV8S Sourcing	AB:5000_SD08:I:0
▶ R1756:10:I	1756-OB32	AB:1756_DO:I:0
▶ R1756:5:I	1756-OB16D	AB:1756_DO_DC_Diag:I:0
▶ R1756:4:I	1756-IF16H	AB:1756_IF16H_AnalogHARTbyChannel...
▶ R1756:9:I	1756-IF8	AB:1756_IF8_Float:I:0
▶ R1756:8:I	1756-IB32	AB:1756_DI:I:0

The I/O channel descriptions are linked to the channel’s primary data tag *.@Description* field. For Analog Input modules this is the individual I.ChxData REAL tags. Failure to fill in these tags will result in HMI diagnostic errors. These tags can be filled out using Studio 5000 Application Code Manager.

R1756:9:I.Ch0Data	PT-6005	REAL
R1756:9:I.Ch1Data	PT-6006	REAL
R1756:9:I.Ch2Data	PT-7001	REAL
R1756:9:I.Ch3Data	TT-7001	REAL
R1756:9:I.Ch4Data	LT-101	REAL
R1756:9:I.Ch5Data	LT-102	REAL
R1756:9:I.Ch6Data	PT-8020	REAL
R1756:9:I.Ch7Data	TT-8020	REAL

Home

The Home tab is the main tab of the faceplate. I/O channel data and fault information. The banner at the top of the faceplate displays module status and fault information.

Item	Description
1	Faceplate title bar. Display's Module:I.@Description
2	Module ready status.  GREEN = Ready  YELLOW = Module Fault/Not Ready
3	Channel Data
4	Channel Fault Indication. "!" icon and yellow border.
5	Page Navigation. 2 channels shown per page.
6	Module/Channel Fault status text. May display the following: - Module Fault - All Channel Data remains at last pre-fault state - Channel Fault Exists - Data remains at last pre-fault state
7	Channel description. Module:I.Data.x.@Description

Item	Description
8	HART Data: PV: Primary Value SV: Secondary Value TV: Third/Tertiary Value FV: Fourth Value
9	HART Diagnostics (1715 modules only) Command Status: - Success - Busy - Command Not Implemented - Buffer Overflow - Reserved, Set to 0 - Longitudinal Parity Error - Framing Error - Overrun Error - Vertical Parity Error Field Status: - Primary Variable Out of Limits - Non-Prim Var. Out of Limits - Analog Output Saturated - Analog Output Current Fixed - More Status Available - Cold Start - Configuration Changed - Field Device Malfunction External Device Status: - Maintenance Required - Device Variable Alert - Critical Power Failure - Undefined
10	Channel Fault Type: - Maintenance Required - Configuration Changed - Device Variable Alert - Current Fault - HART Comm Fail - Broken Wire - HART Fault - Calibration Fault - Overrange - Underrange

## Application Code Manager

The IO Device Library can be used with Studio 5000® Application Code Manager to configure all required I/O for a project. All I/O modules can be found in the (RA-LIB) ACM 2.00 Library within the *Module* folder.

Refer to the section [Using Application Code Manager](#) for complete details.

## Module Object Parameters

Each module object (e.g. 5094-IF8IH) has parameters which can be configured in Studio 5000® Application Code Manager prior to Controller code generation.

Parameter Name	Default Value	Description
ChxDescription		Whenever a channel is used for a Hart module, it must have a tag description. If the Hart module is not present, you need to specify "Unused" in the channel description. Channel tag description is used in Studio 5000 and HMI faceplate.:I.Data.x.@Description tag and shown on HMI faceplates.
FPLaunch_Button_Label	[ModuleName]	Module:I.@Description tag and shown on basic text launch buttons.
SEAssocDisplay		Associated HMI SE Display
MEAssocDisplay		Associated HMI ME Display
Slot	Next Available	This is the slot that this module is located in.
RPI	20	This is the RPI of the module (ms).
ChassisName	[ChassisName]	This is the Chassis that this module is located in.
FaceplateType	PlantPaxData	Selected Faceplate Type PlantPaxData or Data
ChxReference		Select the channel tag reference

## Configured HMI Content

## Analog Output Modules

### Overview

Analog Output module objects include Studio 5000® Application Code Manager modules and HMI faceplates for FactoryTalk® View ME/SE and Studio 5000 View Designer®. HMI faceplates provide the following information:

- Module description, status, and faults
- Channel description, data and faults

### Required Files

IO Device Objects include HMI faceplates. There is no controller programming required other than the creation of the I/O module in the project. If using FactoryTalk® View ME/SE you must also import the tag import file *FTViewStudio\_IOLibrary\_Tags\_5\_00.CSV* to support navigation on faceplates with multiple tabs or pages.

Note that the revision numbers (e.g. 5.01) used in filenames below can change as new revisions are created.

### FactoryTalk® View HMI Files

FactoryTalk® View ME/SE applications require importing the desired device faceplates in addition to all Global Object (ggfx) files and all images located in the */HMI FactoryTalk® View Images - png/* folder of the library. FactoryTalk® View ME files are stored in the */HMI - FactoryTalk View ME/* library folder and FactoryTalk® View SE files are stored in the */HMI - FactoryTalk View SE/* library folder.

#### *GGFX Global Object Files*

Device/Item	Compatible Modules	FactoryTalk® View SE Faceplate	FactoryTalk® View ME Faceplate
Graphic Symbols	All IO Modules	(raC-5-SE) Graphic Symbols - IO Device	(raC-5-ME) Graphic Symbols - IO Device
Toolbox	All IO Modules	(raC-5-SE) Toolbox -IO Device.ggfx	(raC-5-ME) Toolbox -IO Device.ggfx

## Studio 5000 View Designer HMI Files

All Studio 5000 View Designer Files can be found in the */HMI - ViewDesigner - vpd/* folder of the library. Each I/O family (e.g. 1756) has a single .VPD file which contains faceplate screens for all I/O modules in that family.

Family	View Designer File	Module	View Designer Screen
1715	raC_Dvc_1715IO_wDesc.vpd	1715-OF8I	raC_Dvc_1715-OF8I_AnalogSimplex_wDesc_FP

## Studio 5000® Application Code Manager Files

Studio 5000® Application Code Manager (ACM) can be optionally used if it is installed. All devices can be easily registered in the ACM repositories by running the *setup.cmd* file located in the root folder of the library.

Individual HSL4 files are provided as an alternative to running the *setup.cmd* to allow users to manually register specific implementation objects. Each object has two files - an Asset Control file and a Device file. The Module files include attachments of all required files for that object.

All Studio 5000® Application Code Manager files can be found in the / *ApplicationCodeManagerLibraries/* folder of the library. The files included are as follows:

Family	Application Code Manager File
1715	(RA-LIB)_ACM_2.00_Module_Analog_1715-OF8L_A_(5.3).HSL4
1732E	(RA-LIB)_ACM_2.00_Module_Analog_1732E-OF4M12R_A_(5.3).HSL4
1734	(RA-LIB)_ACM_2.00_Module_Analog_1734sc-0E2CIH_A_(5.3).HSL4
	(RA-LIB)_ACM_2.00_Module_Analog_1734-0E2C_C_(5.3).HSL4
	(RA-LIB)_ACM_2.00_Module_Analog_1734-0E2V_C_(5.3).HSL4
	(RA-LIB)_ACM_2.00_Module_Analog_1734-0E4C_C_(5.3).HSL4
1738	(RA-LIB)_ACM_2.00_Module_Analog_1738-0E2CM12_A_(5.3).HSL4
	(RA-LIB)_ACM_2.00_Module_Analog_1738-0E2VM12_A_(5.3).HSL4
	(RA-LIB)_ACM_2.00_Module_Analog_1738-0E4CM12_A_(5.3).HSL4
1756	(RA-LIB)_ACM_2.00_Module_Analog_1756-OF4_B_(5.3).HSL4
	(RA-LIB)_ACM_2.00_Module_Analog_1756-OF8_B_(5.3).HSL4
	(RA-LIB)_ACM_2.00_Module_Analog_1756-OF6CI_(5.3).HSL4
	(RA-LIB)_ACM_2.00_Module_Analog_1756-OF6VI_(5.3).HSL4
	(RA-LIB)_ACM_2.00_Module_Analog_1756-OF8L_B_(5.3).HSL4
1769	(RA-LIB)_ACM_2.00_Module_Analog_1769-OF2_B_(5.3).HSL4
	(RA-LIB)_ACM_2.00_Module_Analog_1769-OF4_A_(5.3).HSL4
	(RA-LIB)_ACM_2.00_Module_Analog_1769-OF4CI_A_(5.3).HSL4
	(RA-LIB)_ACM_2.00_Module_Analog_1769-OF4VI_A_(5.3).HSL4
	(RA-LIB)_ACM_2.00_Module_Analog_1769-OF8C_A_(5.3).HSL4
	(RA-LIB)_ACM_2.00_Module_Analog_1769-OF8V_A_(5.3).HSL4
1794	(RA-LIB)_ACM_2.00_Module_Analog_1794-OF4L_A_(5.3).HSL4
	(RA-LIB)_ACM_2.00_Module_Analog_1794-0E12_A_(5.3).HSL4
	(RA-LIB)_ACM_2.00_Module_Analog_1794-0E4_B_(5.3).HSL4
5069	(RA-LIB)_ACM_2.00_Module_Analog_5069-OF4_A_(5.3).HSL4
	(RA-LIB)_ACM_2.00_Module_Analog_5069-OF8_A_(5.3).HSL4
5094	(RA-LIB)_ACM_2.00_Module_Analog_5094-OF8_A_(5.3).HSL4
	(RA-LIB)_ACM_2.00_Module_Analog_5094-OF8XT_A_(5.3).HSL4

## Graphic Symbols

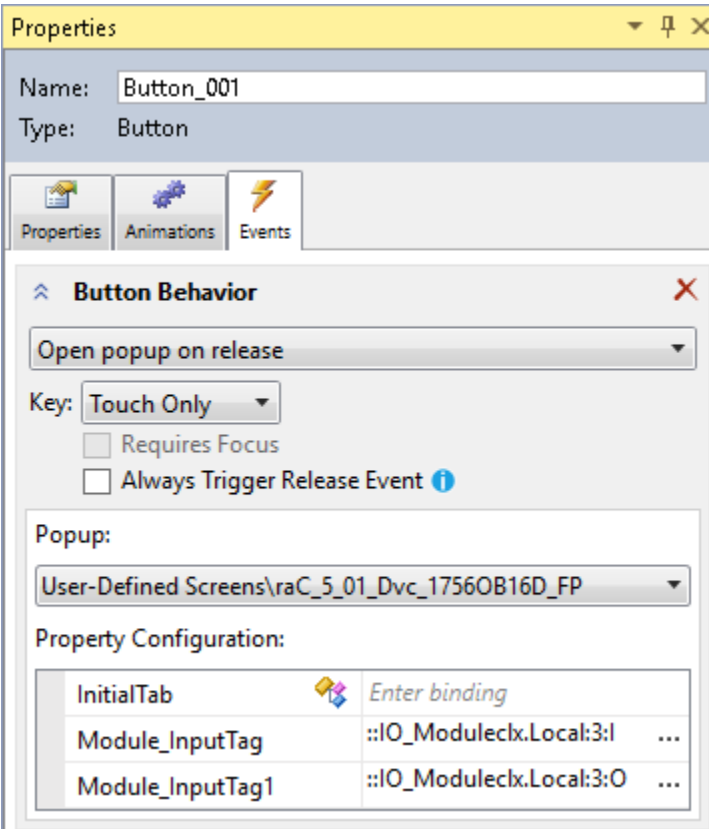

Graphic Symbols are used as launch buttons within HMI applications to open up faceplate displays. A generic rectangular pushbutton with a text label can be used, or a graphical style button with abnormal indicator icons can be used. See [Basic Launch Button Attributes](#) section for details on configuration and indicators.

## FactoryTalk® View ME/SE Graphic Symbols

Graphic Symbol Name	Description	Global Object Parameter Values	Graphic Symbol
GO_GotoDisplay1	Faceplate navigation button with string tag label.	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #105: Custom button label. Leave blank to use Tag.@Description #120: Display's left position #121: Display's top position	
GO_LaunchAO_17xx	Use with 1715/1734/1769 Analog Output Modules	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #120: Display's left position #121: Display's top position	
GO_LaunchAO_50xx	Use with 1719/5069/5015 Analog Output Modules	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #111: IO Class: Blank = Standard; 1= Safety #120: Display's left position #121: Display's top position	
GO_Launch_AO_1756	Use with 1756 Standard Analog Output Modules	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #120: Display's left position #121: Display's top position

GO_LaunchIn_Armor	Use with 1732E/1738 Analog Input/Output Modules	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #105: Custom button label. Leave blank to use Tag.@Description #120: Display's left position #121: Display's top position	

## Studio 5000 View Designer® Graphic Symbols

All Studio 5000 View Designer® graphic symbols must be configured with an *Event* to open up the appropriate Popup screen. Select the graphic symbol and in the *Properties* window navigate to the *Events* tab. Assign a *Button Behavior* event to *Open popup on release*. Assign the required Popup screen (e.g. User-Defined Screens\raC\_5\_02\_Dvc\_1756OB16D\_wDesc\_FP). The required *Property Configurations* are found in the following table where you may assign an *InitialTab* to 11 to ensure the pop-up opens on the Home Tab, and assign the *Module\_OutputTag* to the module's :I controller tag (e.g. ::PAC.Local:3:I).

Graphic Symbol Name	Description	Properties - Events Configuration	Graphic Symbol
Button_001	Faceplate navigation button with string tag label. Use Properties > General > Text to modify the button label text.	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_LaunchAO_17xx	Use with 1715/1734/1769 Analog Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_LaunchAO_50xx	Use with 1719/5069/5015 Analog Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_Launch_AO_1756	Use with 1756 Standard Analog Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_Launch_AOHR_1756	Use with 1756 High-Resolution Analog Output Modules (-OF8I)	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_Launch_AO_1794	Use with 1794 Analog Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_Launch_AO_5094	Use with 5094 Analog Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_LaunchIn_Armor	Use with 1732E/1738 Analog Input/Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	

## Faceplates

There are basic faceplate attributes that are common across all instructions. See [Basic Faceplate Attributes on page 40](#).

In this document, the faceplate pictures (or snapshots) are shown in FactoryTalk® View ME. Faceplates will look similar in FactoryTalk® View SE or Studio 5000 View Designer®. Number of I/O channels and minor details may vary depending on the exact I/O module.

The faceplate title is linked to *Module:I.@description*, the *.@description* extended tag property of the module's Output tag instance. This is user-configurable from controller/program tags in Studio 5000 Logix Designer.

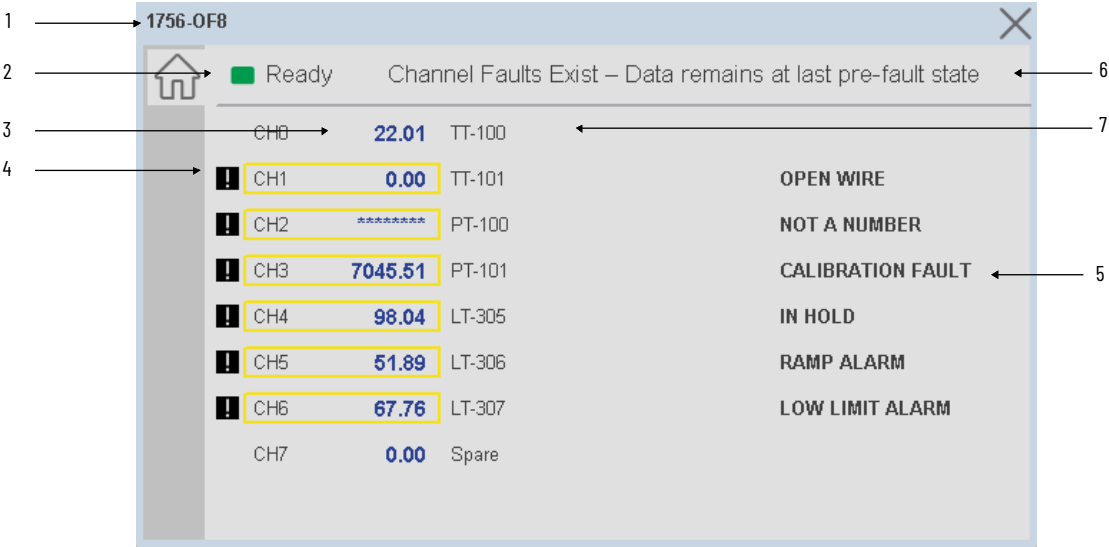

Name	Description	Data Type
▶ R1756:2:I	1756-SOE	AB:1756_SOE_16PointCIPSync:I:0
▶ R1756:2:C	1756-SOE	AB:1756_SOE:C:1
▶ R1756:7:I	1756-OF8H	AB:1756_OF8H_AnalogHARTbyChannel...
▶ R1756:11:I	1756-OF8	AB:1756_OF8_Float:I:0
▶ R1756:6:I	1756-OBV8S Sourcing	AB:5000_SDO8:I:0
▶ R1756:10:I	1756-OB32	AB:1756_DO:I:0
▶ R1756:5:I	1756-OB16D	AB:1756_DO_DC_Diag:I:0
▶ R1756:4:I	1756-IF16H	AB:1756_IF16H_AnalogHARTbyChannel...
▶ R1756:9:I	1756-IF8	AB:1756_IF8_Float:I:0
▶ R1756:8:I	1756-IB32	AB:1756_DI:I:0

The I/O channel descriptions are linked to the channel's primary data tag *.@Description* field. For Analog Output modules this is the individual *O.ChxData* REAL tags. Failure to fill in these tags will result in HMI diagnostic errors. These tags can be filled out using Studio 5000 Application Code Manager.

Name	Description	Data Type
R1756:11:I.Ch0Data	PIC-301	REAL
R1756:11:I.Ch1Data	LIC-301	REAL
R1756:11:I.Ch2Data	TIC-505	REAL
R1756:11:I.Ch3Data	TIC-506	REAL
R1756:11:I.Ch4Data	Spare	REAL
R1756:11:I.Ch5Data	Spare	REAL
R1756:11:I.Ch6Data	Spare	REAL

## Home

The Home tab is the main tab of the faceplate. I/O channel data and fault information. The banner at the top of the faceplate displays module status and fault information.

Item	Description
1	Faceplate title bar. Display's Module:I.@Description
2	Module ready status. <div><div>GREEN = Ready</div><div>YELLOW = Module Fault/Not Ready</div></div>
3	Channel Data
4	Channel Fault Indication. "!" icon and yellow border.
5	Channel Fault Type: <ul style="list-style-type: none"><li>- Ramp Alarm</li><li>- Not A Number</li><li>- Wire Off</li><li>- Calibration Fault</li><li>- In Hold</li><li>- High Limit Alarm</li><li>- Low Limit Alarm</li></ul>
6	Module/Channel Fault status text. May display the following: <ul style="list-style-type: none"><li>- Module Fault - All Channel Data remains at last pre-fault state</li><li>- Channel Fault Exists - Data remains at last pre-fault state</li></ul>
7	Channel description. Module:O.Data.x.@Description

## Application Code Manager

The IO Device Library can be used with Studio 5000® Application Code Manager to configure all required I/O for a project. All I/O modules can be found in the (RA-LIB) ACM 2.00 Library within the *Module* folder.

Refer to the section [Using Application Code Manager](#) for complete details.

## Module Object Parameters

Each module object (e.g. 1756-OF8) has parameters which can be configured in Studio 5000® Application Code Manager prior to Controller code generation.

Parameter Name	Default Value	Description
OverrideDefaults	True	User can modify the HVL Engineering value for the channels
LowSignal	0	Low signal input to module
HighSignal	20	High signal input to module
LowEngineering	0	Low scaled signal output from module
HighEngineering	20	High scaled signal output from module
ChxDescription		Channel tag description used in Module:I.Data.x.@Description tag and shown on HMI faceplates.
FPLaunch_Button_Label	[ModuleName]	Module:I.@Description tag and shown on basic text launch buttons.
SEAssocDisplay		Associated HMI SE Display
MEAssocDisplay		Associated HMI ME Display
Slot	Next Available	This is the slot that this module is located in.
RPI	20	This is the RPI of the module (ms).
ChassisName	[ChassisName]	This is the Chassis that this module is located in.
CommFormat	Float Data	Select the communications format to be used
OutputRange	0	Sets the input Range type of the channels 0=-10V to 10V, 1=0 ma to 20ma

## Configured HMI Content

HMI Content	Instance Name	Description
Launch Button	GO_LaunchFP	Global Object generic rectangular text launch button
Launch Button	GO_LaunchAO_17xx	Use with 1715/1734/1769 Analog Output Modules
Launch Button	GO_LaunchAO_50xx	Use with 1719/5069/5015 Analog Output Modules
Launch Button	GO_Launch_AO_1756	Use with 1756 Standard Analog Output Modules
Launch Button	GO_Launch_AOHR_1756	Use with 1756 High-Resolution Analog Output Modules (-OF8I)
Launch Button	GO_Launch_AO_1794	Use with 1794 Analog Output Modules
Launch Button	GO_Launch_AO_5094	Use with 5094 Analog Output Modules
Launch Button	GO_LaunchInOut_Armor	Use with 1732E/1738 Analog Input/Output Modules

## Analog Output with HART Modules

### Overview

Analog Output with HART module objects include Studio 5000® Application Code Manager modules and HMI faceplates for FactoryTalk® View ME/SE and Studio 5000 View Designer®. HMI faceplates provide the following information:

- Module description, status, and faults
- Channel description, data and faults
- HART multi-variable data and diagnostics

Note that 5094 HART modules have two modes:

- HART
- PlantPax HART
- Use the PlantPax® faceplate and Application Code Manager configuration in PlantPax® applications for use with the PlantPax® Process Object Library.

### Required Files

IO Device Objects include HMI faceplates. There is no controller programming required other than the creation of the I/O module in the project. If using FactoryTalk® View ME/SE you must also import the tag import file *FTViewStudio\_IOLibrary\_Tags\_5\_00.CSV* to support navigation on faceplates with multiple tabs or pages.

Note that the revision numbers (e.g. 5.01) used in filenames below can change as new revisions are created.

### FactoryTalk® View HMI Files

FactoryTalk® View ME/SE applications require importing the desired device faceplates in addition to all Global Object (ggfx) files and all images located in the */HMI FactoryTalk® View Images - png/* folder of the library. FactoryTalk® View ME files are stored in the */HMI - FactoryTalk View ME/* library folder and FactoryTalk® View SE files are stored in the */HMI - FactoryTalk View SE/* library folder.

#### *GGFX Global Object Files*

Device/Item	Compatible Modules	FactoryTalk® View SE Faceplate	FactoryTalk® View ME Faceplate

## Studio 5000 View Designer HMI Files

All Studio 5000 View Designer Files can be found in the */HMI - ViewDesigner - vpd/* folder of the library. Each I/O family (e.g. 1756) has a single .VPD file which contains faceplate screens for all I/O modules in that family.

Family	View Designer File	Module	View Designer Screen
1715	raC_Dvc_1715IO_wDesc.vpd	1715-0F8I	raC_Dvc_1715-0F8I_HARTSimplex_wDesc_FP
			raC_Dvc_1715-0F8I_HARTDuplex_wDesc_FP

			raC_Dvc_5069_0F4IH_PlantPax_wDesc_FP

## Studio 5000® Application Code Manager Files

Studio 5000® Application Code Manager (ACM) can be optionally used if it is installed. All devices can be easily registered in the ACM repositories by running the *setup.cmd* file located in the root folder of the library.

Individual HSL4 files are provided as an alternative to running the *setup.cmd* to allow users to manually register specific implementation objects. Each object has two files - an Asset Control file and a Device file. The Module files include attachments of all required files for that object.

All Studio 5000® Application Code Manager files can be found in the / *ApplicationCodeManagerLibraries/* folder of the library. The files included are as follows:

Family	Module	Application Code Manager File
1715	1715-OF8I	(RA-LIB)_ACM_2.00_Module_Analog_1715-OF8I_A_(5.3).HSL4
1756	1756-OF8H	(RA-LIB)_ACM_2.00_Module_Analog_1756-OF8H_B_(5.3).HSL4
1769	1769sc-OF4IH	(RA-LIB)_ACM_2.00_Module_Analog_1769sc-OF4IH_A_(5.3).HSL4
1794	1794-OF8IH	(RA-LIB)_ACM_2.00_Module_Analog_1794-OF8IH_A_(5.3).HSL4
5094	5094-OF8IH	(RA-LIB)_ACM_2.00_Module_Analog_5094-OF8IH_A_(5.3).HSL4
	5094-OF8IHXT	(RA-LIB)_ACM_2.00_Module_Analog_5094-OF8IHXT_A_(5.3).HSL4
5069	5069-OF4IH	(RA-LIB)_ACM_2.00_Module_Analog_5069-OF4IH_A_(5.4).HSL4
	5069-OF4IHXT	(RA-LIB)_ACM_2.00_Module_Analog_5069-OF4IHXT_A_(5.4).HSL4

## Graphic Symbols

Graphic Symbols are used as launch buttons within HMI applications to open up faceplate displays. A generic rectangular pushbutton with a text label can be used, or a graphical style button with abnormal indicator icons can be used. See [Basic Launch Button Attributes](#) section for details on configuration and indicators.

Note:- If you are not utilizing all the channels of 5094-OF8IH/5069-OF4IH, you should follow the steps below for the unused channels.

Step:-1

The Dummy\_HART tag should be created in the controller scope and the data type should be the same as the Hart module.

▶ HART_1:I	{...}	{...}	AB:5000_HART4:I:0
▶ HART_1:O	{...}	{...}	AB:5000_HART:O:0
▶ HART_2:I	{...}	{...}	AB:5000_HART4:I:0
▶ HART_2:O	{...}	{...}	AB:5000_HART:O:0
▶ Dummy_HART	{...}	{...}	AB:5000_HART4:I:0

Step:-2

Whenever a channel is used for a Hart module, it must have a tag description. If the Hart module is not present on any one of the channel, you need to specify "Unused" in the channel description.e.g. If HART module is not used on channel no. 02 then add AENTR\_5094:1:I.Cho2.Data.@Description = Unused.

▲ AENTR_5094:1:I	{...}	{...}	AB:5000_...	5094-IF8IH
▷ AENTR_5094:1:I.Ch00	{...}	{...}	CHANNE...	5094-IF8IH
▷ AENTR_5094:1:I.Ch01	{...}	{...}	CHANNE...	5094-IF8IH
▲ AENTR_5094:1:I.Ch02	{...}	{...}	CHANNE...	5094-IF8IH
AENTR_5094:1:I.Ch02.CalFault	0	Deci...	BOOL	5094-IF8IH
AENTR_5094:1:I.Ch02.Calibrating	0	Deci...	BOOL	5094-IF8IH
AENTR_5094:1:I.Ch02.Data	0.0	Float	REAL	Unused
AENTR_5094:1:I.Ch02.Fault	0	Deci...	BOOL	5094-IF8IH
AENTR_5094:1:I.Ch02.FieldPowerOff	0	Deci...	BOOL	5094-IF8IH
AENTR_5094:1:I.Ch02.HAlarm	0	Deci...	BOOL	5094-IF8IH
AENTR_5094:1:I.Ch02.HHAlarm	0	Deci...	BOOL	5094-IF8IH
AENTR_5094:1:I.Ch02.LAlarm	0	Deci...	BOOL	5094-IF8IH
AENTR_5094:1:I.Ch02.LLAlarm	0	Deci...	BOOL	5094-IF8IH

Step:-3

In the example below, Channels 0 and 1 are utilized for HART devices, hence we are passing HART device tags. Channels 2 to 7, however, remain unused, so we are passing Dummy\_HART tags for those channels.

Name	Value	Tag	Description
#102	(raC-5_02-ME) raC_Dvc_5094_OF8IH_HART-Faceplate	...	Faceplate Display Name e.g. (raC-5_00-ME) raC_Dvc_XXXX_XXXX-Faceplate
#103	{::[PAC]AENTR_5094:1:I}	...	IO Module Input Tag e.g. {::[Topic Name]Local:1:I}

## Studio 5000 View Designer® Graphic Symbols

All Studio 5000 View Designer® graphic symbols must be configured with an *Event* to open up the appropriate Popup screen. Select the graphic symbol and in the *Properties* window navigate to the *Events* tab. Assign a *Button Behavior* event to *Open popup on release*. Assign the required Popup screen (e.g. User-Defined Screens\raC\_5\_02\_Dvc\_1756OB16D\_wDesc\_FP). The required *Property Configurations* are found in the following table where you may assign an *InitialTab* to 11 to ensure the pop-up opens on the Home Tab, and assign the *Module\_OutputTag* to the module's :I controller tag (e.g. ::PAC.Local:3:I).

Graphic Symbol Name	Description	Properties - Events Configuration	Graphic Symbol
Button_001	Faceplate navigation button with string tag label. Use Properties > General > Text to modify the button label text.	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_LaunchAO_17xx	Use with 1715/1734/1769 Analog Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_LaunchAO_50xx	Use with 1719/5069/5015 Analog Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_Launch_AO_1756	Use with 1756 Standard Analog Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_Launch_A0HR_1756	Use with 1756 High-Resolution Analog Output Modules (-OF8I)	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_Launch_AO_1794	Use with 1794 Analog Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_Launch_AO_5094	Use with 5094 Analog Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	

Faceplates

There are basic faceplate attributes that are common across all instructions.  
See [Basic Faceplate Attributes on page 40](#).

In this document, the faceplate pictures (or snapshots) are shown in FactoryTalk® View ME. Faceplates will look similar in FactoryTalk® View SE or Studio 5000 View Designer®. Number of I/O channels and minor details may vary depending on the exact I/O module.

The faceplate title is linked to *Module:I.@description*, the *.@description* extended tag property of the module's Output tag instance. This is user-configurable from controller/program tags in Studio 5000 Logix Designer.

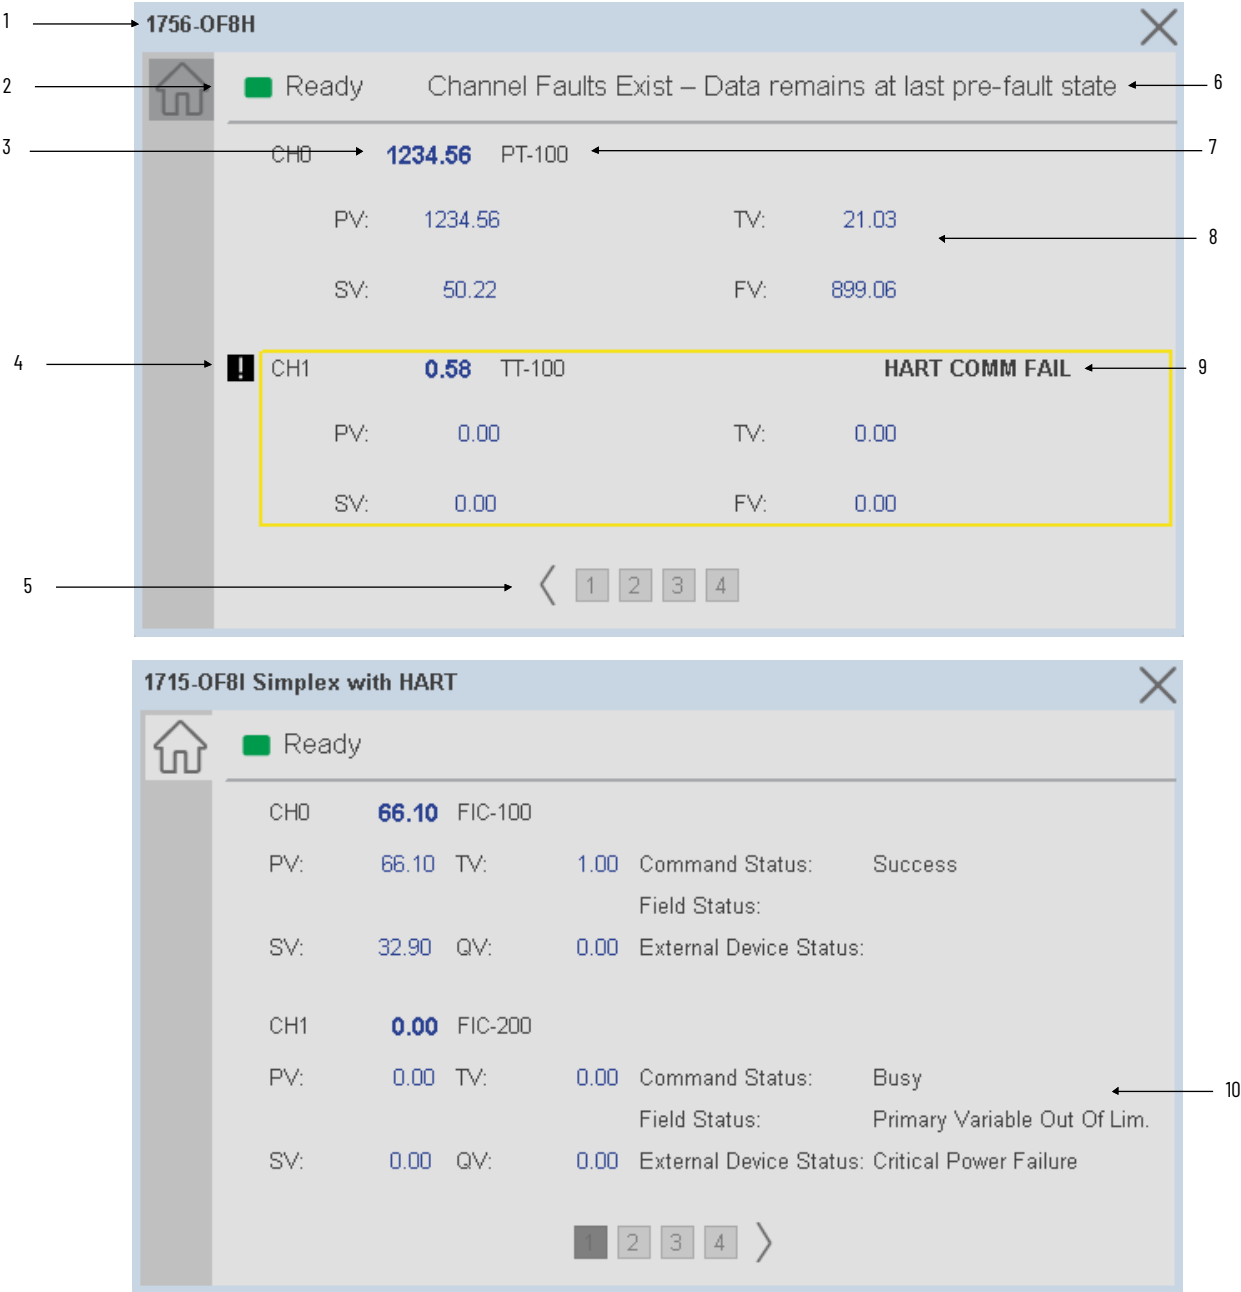

Name	Description	Data Type
▶ R1756:2:I	1756-SOE	AB:1756_SOE_16PointCIPSync:I:0
▶ R1756:2:C	1756-SOE	AB:1756_SOE:C:1
▶ R1756:7:I	1756-OF8H	AB:1756_OF8H_AnalogHARTbyChannel...
▶ R1756:11:I	1756-OF8	AB:1756_OF8_Float:I:0
▶ R1756:6:I	1756-OBV8S Sourcing	AB:5000_SDO8:I:0
▶ R1756:10:I	1756-OB32	AB:1756_DO:I:0
▶ R1756:5:I	1756-OB16D	AB:1756_DO_DC_Diag:I:0
▶ R1756:4:I	1756-IF16H	AB:1756_IF16H_AnalogHARTbyChannel...
▶ R1756:9:I	1756-IF8	AB:1756_IF8_Float:I:0
▶ R1756:8:I	1756-IB32	AB:1756_DI:I:0

The I/O channel descriptions are linked to the channel's primary data tag *.@Description* field. For Analog Output modules this is the individual O.ChxData REAL tags. Failure to fill in these tags will result in HMI diagnostic errors. These tags can be filled out using Studio 5000 Application Code Manager.

Name	Description	Data Type
R1756:11:I.Ch0Data	PIC-301	REAL
R1756:11:I.Ch1Data	LIC-301	REAL
R1756:11:I.Ch2Data	TIC-505	REAL
R1756:11:I.Ch3Data	TIC-506	REAL
R1756:11:I.Ch4Data	Spare	REAL
R1756:11:I.Ch5Data	Spare	REAL
R1756:11:I.Ch6Data	Spare	REAL

## Home

The Home tab is the main tab of the faceplate. I/O channel data and fault information. The banner at the top of the faceplate displays module status and fault information.

Item	Description	
1	Faceplate title bar. Display's Module:I.@Description	
2	Module ready status.	
	GREEN = Ready	 Ready
	YELLOW = Module Fault/Not Ready	 Not Ready
3	Channel Data	
4	Channel Fault Indication. "!" icon and yellow border.	
5	Page Navigation. 2 channels shown per page.	
6	Module/Channel Fault status text. May display the following: - Module Fault - All Channel Data remains at last pre-fault state - Channel Fault Exists - Data remains at last pre-fault state	

Item	Description
7	Channel description. Module:0.Data.x.@Description
8	HART Data: PV: Primary Value SV: Secondary Value TV: Third/Tertiary Value FV: Fourth Value
9	Channel Fault Type: - Variable Out of Limits - Maintenance Required - Configuration Changed - Device Variable Alert - Current Saturated - HART Comm Fault - PV Out of Limits - Not a Number - Broken Wire - Current Fixed - Power Low - Fault Low Low - HART Fault - Ramp Alarm - Cold Start - Changed - Calibration Fault - Fault High High - Open Wire - In Hold
10	HART Diagnostics (1715 modules only) Command Status: - Success - Busy - Command Not Implemented - Buffer Overflow - Reserved, Set to 0 - Longitudinal Parity Error - Framing Error - Overrun Error - Vertical Parity Error Field Status: - Primary Variable Out of Limits - Non-Prim Var. Out of Limits - Analog Output Saturated - Analog Output Current Fixed - More Status Available - Cold Start - Configuration Changed - Field Device Malfunction External Device Status: - Maintenance Required - Device Variable Alert - Critical Power Failure - Undefined

## Application Code Manager

The IO Device Library can be used with Studio 5000® Application Code Manager to configure all required I/O for a project. All I/O modules can be found in the (RA-LIB) ACM 2.00 Library within the *Module* folder.

Refer to the section [Using Application Code Manager](#) for complete details.

## Module Object Parameters

Each module object (e.g. 5094-IF8IH) has parameters which can be configured in Studio 5000® Application Code Manager prior to Controller code generation.

Parameter Name	Default Value	Description
ChxDescription		Whenever a channel is used for a Hart module, it must have a tag description. If the Hart module is not present, you need to specify "Unused" in the channel description. Channel tag description is used in Studio 5000 and HMI faceplate.:I.Data.x.@Description tag and shown on HMI faceplates.
FPLaunch_Button_Label	[ModuleName]	Module:I.@Description tag and shown on basic text launch buttons.
SEAssocDisplay		Associated HMI SE Display
MEAssocDisplay		Associated HMI ME Display
Slot	Next Available	This is the slot that this module is located in.
RPI	20	This is the RPI of the module (ms).
ChassisName	[ChassisName]	This is the Chassis that this module is located in.
FaceplateType	PlantPaxData	Selected Faceplate Type PlantPaxData or Data
ChXReference		The tag reference for the channel should be selected

## Configured HMI Content

HMI Content	Instance Name	Description
Launch Button	GO_LaunchFP	Global Object generic rectangular text launch button
Launch Button	GO_LaunchAO_17xx	Use with 1715/1734/1769 Analog Output Modules
Launch Button	GO_LaunchAO_50xx	Use with 1719/5069/5015 Analog Output Modules
Launch Button	GO_Launch_AO_1756	Use with 1756 Standard Analog Output Modules
Launch Button	GO_Launch_AOHR_1756	Use with 1756 High-Resolution Analog Output Modules (-OF8I)
Launch Button	GO_Launch_AO_1794	Use with 1794 Analog Output Modules
Launch Button	GO_Launch_AO_5094	Use with 5094 Analog Output Modules

## 1715 Duplex Modules

### Overview

1715 Duplex I/O module objects include Studio 5000® Application Code Manager modules and HMI faceplates for FactoryTalk® View ME/SE and Studio 5000 View Designer®.

The 1715 I/O family offers the ability to run each module as simplex or duplex (redundant) mode. Analog modules can also be configured as standard analog or as analog HART. For simplex mode, see the other sections in this manual for:

- [Digital Input Diagnostic Modules](#)
- [Digital Output Diagnostic Modules](#)
- [Analog Input Modules](#)
- [Analog Input with HART Modules](#)
- [Analog Output Modules](#)
- [Analog Output with HART Modules](#)

This section covers unique attributes of using the duplex faceplates along with duplex configured 1715 I/O modules. There are 6duplex faceplates for the following configurations:

- Duplex Digital Input Diagnostic Modules
- Duplex Digital Output Diagnostic Modules
- Duplex Analog Input Modules
- Duplex Analog Input with HART Modules
- Duplex Analog Output Modules
- Duplex Analog Output with HART Modules

In addition to the simplex version of these modules, these duplex faceplates offer the following information:

- Module A/B status and fault information
- Channel Module A/B fault information

### Required Files

IO Device Objects include HMI faceplates. There is no controller programming required other than the creation of the I/O module in the project. If using FactoryTalk® View ME/SE you must also import the tag import file *FTViewStudio\_IOLibrary\_Tags\_5\_00.CSV* to support navigation on faceplates with multiple tabs or pages.

Note that the revision numbers (e.g. 5.01) used in filenames below can change as new revisions are created.

## FactoryTalk® View HMI Files

FactoryTalk® View ME/SE applications require importing the desired device faceplates in addition to all Global Object (ggfx) files and all images located in the */HMI FactoryTalk® View Images - png/* folder of the library. FactoryTalk® View ME files are stored in the */HMI - FactoryTalk View ME/* library folder and FactoryTalk® View SE files are stored in the */HMI - FactoryTalk View SE/* library folder.

### GGFX Global Object Files

## Studio 5000 View Designer HMI Files

All Studio 5000 View Designer Files can be found in the */HMI - ViewDesigner - vpd/* folder of the library. Each I/O family (e.g. 1756) has a single .VPD file which contains faceplate screens for all I/O modules in that family.

Family	View Designer File	Module	View Designer Screen
1715	raC_Dvc_1715IO_wDesc.vpd	1715-IB16D	raC_Dvc_1715-IB16D_Duplex_wDesc_FP
		1715-IF16	raC_Dvc_1715-IF16_AnalogDuplex_wDesc_FP
		1715-IF16	raC_Dvc_1715-IF16_HARTDuplex_wDesc_FP
		1715-OB8DE	raC_Dvc_1715-OB8DE_Duplex_wDesc_FP
			raC_Dvc_1715-OB8DE_Simplex_wDesc_FP
		1715-OF8I	raC_Dvc_1715-OF8I_AnalogDuplex_wDesc_FP
			raC_Dvc_1715-OF8I_AnalogSimplex_wDesc_FP
			raC_Dvc_1715-OF8I_HARTDuplex_wDesc_FP
			raC_Dvc_1715-OF8I_HARTSimplex_wDesc_FP

## Studio 5000® Application Code Manager Files

Studio 5000® Application Code Manager (ACM) can be optionally used if it is installed. All devices can be easily registered in the ACM repositories by running the *setup.cmd* file located in the root folder of the library.

Individual HSL4 files are provided as an alternative to running the *setup.cmd* to allow users to manually register specific implementation objects. Each object has two files - an Asset Control file and a Device file. The Module files include attachments of all required files for that object.

All Studio 5000® Application Code Manager files can be found in the / *ApplicationCodeManagerLibraries/* folder of the library. The files included are as follows:

Family	Module	Application Code Manager File
1715	1715-IF16	(RA-LIB)_ACM_2.00_Module_Analog_1715-IF16_A_(5.3).HSL4
	1715-OB8DE	(RA-LIB)_ACM_2.00_Module_Digital_1715-OB8DE_A_(5.3).HSL4
	1715-OF8I	(RA-LIB)_ACM_2.00_Module_Analog_1715-OF8I_A_(5.3).HSL4
	1715-IB16D	(RA-LIB)_ACM_2.00_Module_Digital_1715-IB16D_A_(5.3).HSL4

## Graphic Symbols

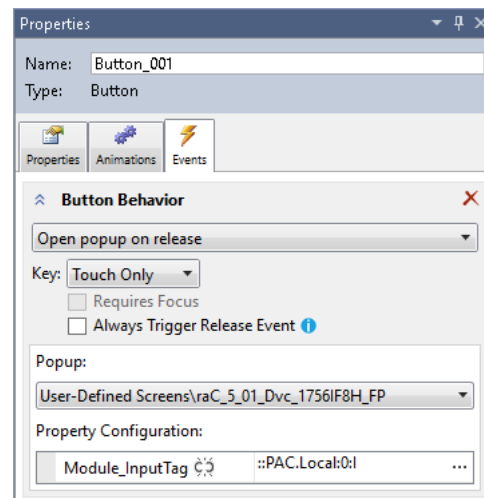

Graphic Symbols are used as launch buttons within HMI applications to open up faceplate displays. A generic rectangular pushbutton with a text label can be used, or a graphical style button with abnormal indicator icons can be used. See [Basic Launch Button Attributes](#) section for details on configuration and indicators.

## FactoryTalk® View ME/SE Graphic Symbols

Graphic Symbol Name	Description	Global Object Parameter Values	Graphic Symbol
G0_GotoDisplay	Faceplate navigation button with string tag label. Use with input modules.	#102: Faceplate Display Name #103: IO Module Input Tag #105: Custom button label. Leave blank to use Tag.@Description #120: Display's left position #121: Display's top position	
G0_GotoDisplay1	Faceplate navigation button with string tag label. Use with output modules.	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #105: Custom button label. Leave blank to use Tag.@Description #120: Display's left position #121: Display's top position	
G0_LaunchDCIn_17xx	Use with 1715/1734/1756/1769 DC Input Modules	#102: Faceplate Display Name #103: IO Module Input Tag #120: Display's left position #121: Display's top position

G0_LaunchAO_17xx	Use with 1715/1734/1769 Analog Output Modules	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #120: Display's left position #121: Display's top position	

## Studio 5000 View Designer® Graphic Symbols

All Studio 5000 View Designer® graphic symbols must be configured with an *Event* to open up the appropriate Popup screen. Select the graphic symbol and in the *Properties* window navigate to the *Events* tab. Assign a *Button Behavior* event to *Open popup on release*. Assign the required Popup screen (e.g. User-Defined Screens\raC\_5\_02\_Dvc\_1756OB16D\_wDesc\_FP). The required *Property Configurations* are found in the following table where you may assign an *InitialTab* to 11 to ensure the pop-up opens on the Home Tab, and assign the *Module\_InputTag* to the module's :I controller tag (e.g. ::PAC.Local:3:I).

Graphic Symbol Name	Description	Properties - Events Configuration	Graphic Symbol
Button_001	Faceplate navigation button with string tag label. Use Properties > General > Text to modify the button label text. Use with input modules.	InitialTab: 11 Module_InputTag: IO Module Input Tag	
Button_002	Faceplate navigation button with string tag label. Use Properties > General > Text to modify the button label text. Use with output modules.	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_LaunchDCIn_17xx	Use with 1715/1734/1756/1769 DC Input Modules	#102: Faceplate Display Name #103: IO Module Input Tag #120: Display's left position #121: Display's top position	
GO_LaunchDCOut_17xx	Use with 1715/1734/1756/1769 DC Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_LaunchAI_17xx	Use with 1715/1734/1769 Analog Input Modules	#102: Faceplate Display Name #103: IO Module Input Tag #120: Display's left position #121: Display's top position	
GO_LaunchAO_17xx	Use with 1715/1734/1769 Analog Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	

## Faceplates

There are basic faceplate attributes that are common across all instructions.  
See [Basic Faceplate Attributes on page 40](#).

In this document, the faceplate pictures (or snapshots) are shown in FactoryTalk® View ME. Faceplates will look similar in FactoryTalk® View SE or Studio 5000 View Designer®. Number of I/O channels and minor details may vary depending on the exact I/O module.

The faceplate title is linked to *Module:I.@description*, the *.@description* extended tag property of the module's input tag instance. This is user-configurable from controller/program tags in Studio 5000 Logix Designer.

▶ R1756:8:I	1756-IB32	AB:1756_DI:I:0

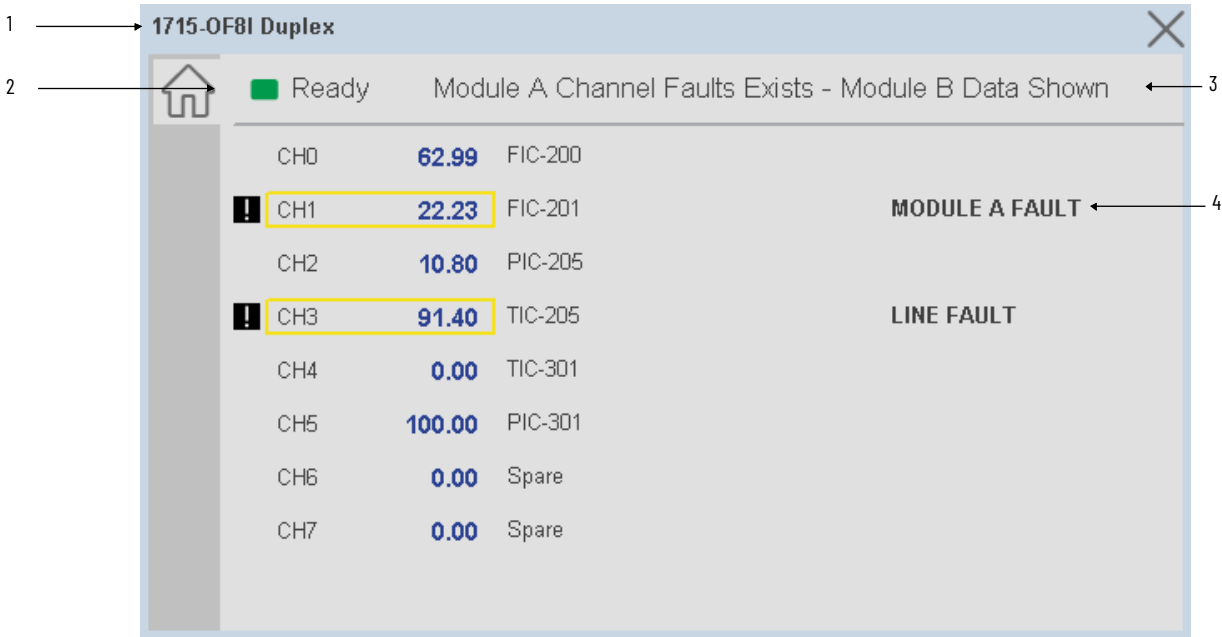

The I/O channel descriptions are linked to the channel's primary data tag *.@Description* field. This is the channel's individual I or O tags such as I.Data.x BOOL tags for Digital Inputs. Failure to fill in these tags will result in HMI diagnostic errors. These tags can be filled out using Studio 5000 Application Code Manager.

Name	Description	Data Type
▲ R1756:8:I	1756-IB32	AB:1756_DI:I:0
▶ R1756:8:I.Fault	1756-IB32	DINT

Home

The Home tab is the main tab of the faceplate. I/O channel data and fault information. The banner at the top of the faceplate displays module status and fault information.

The faceplates for 1715 Duplex I/O modules are the same as other platform's I/O modules with the addition of duplex fault information. This section explains only the differences that are unique to duplex modules.

Item	Description
1	Faceplate title bar. Display's Module:I.@Description
2	Module ready status.
	GREEN = Ready  Ready
	YELLOW = Module Fault/Not Ready  Not Ready
4	Module/Channel Fault status text. May display the following: - Module A - Fault or module not present - Module B - Fault or module not present - Module A Channel Fault Exists - Module B Data Shown - Module B Channel Fault Exists - Module A Data Shown
5	Channel Fault Description (in addition to standard faults) - Module A Fault - Module B Fault

## Application Code Manager

The IO Device Library can be used with Studio 5000® Application Code Manager to configure all required I/O for a project. All I/O modules can be found in the (RA-LIB) ACM 2.00 Library within the *Module* folder.

Refer to the section [Using Application Code Manager](#) for complete details.

## Module Object Parameters

Each module object (e.g. 1715-IF16) has parameters which can be configured in Studio 5000® Application Code Manager prior to Controller code generation.

Parameter Name	Default Value	Description
ChxDescription		Channel tag description used in Module:I.Data.x.@Description tag and shown on HMI faceplates.
FPLaunch_Button_Label	[ModuleName]	Module:I.@Description tag and shown on basic text launch buttons.
SEAssocDisplay		Associated HMI SE Display
MEAssocDisplay		Associated HMI ME Display
Slot	Next Available	This is the slot that this module is located in.
RPI	20	This is the RPI of the module (ms).
ChassisName	[ChassisName]	This is the Chassis that this module is located in.
Redundancy	Yes	Module redundancy - Yes - No This parameter is used to set the redundant property of the module.
CommFormat	Analog Only	This is used to Enable Hart parameters.

## Configured HMI Content

HMI Content	Instance Name	Description

## 5015 FLEXHA 5000 Universal I/O Modules

### Overview

5015 FLEXHA 5000 Universal I/O (5015-U8IHFTXT) module objects include Studio 5000® Application Code Manager modules and HMI faceplates for FactoryTalk® View ME/SE and Studio 5000 View Designer®.

5015-U8IHFTXT modules can be run in simplex or duplex mode. A different faceplate is provided for simplex mode and duplex. Each channel of the universal I/O module can be configured for an I/O type (digital input/digital output/analog input/analog output). At this time the HMI faceplates provided do not display channel specific information.

HMI faceplates provide the following information:

- Module description, status, and faults.
- Duplex modules provide channel diagnostic status.

### Required Files

IO Device Objects include HMI faceplates. There is no controller programming required other than the creation of the I/O module in the project. If using FactoryTalk® View ME/SE you must also import the tag import file *FTViewStudio\_IOLibrary\_Tags\_5\_00.CSV* to support navigation on faceplates with multiple tabs or pages.

Note that the revision numbers (e.g. 5.01) used in filenames below can change as new revisions are created.

### FactoryTalk® View HMI Files

FactoryTalk® View ME/SE applications require importing the desired device faceplates in addition to all Global Object (ggfx) files and all images located in the */HMI FactoryTalk® View Images - png/* folder of the library. FactoryTalk® View ME files are stored in the */HMI - FactoryTalk View ME/* library folder and FactoryTalk® View SE files are stored in the */HMI - FactoryTalk View SE/* library folder.

#### *GGFX Global Object Files*

Device/Item	Compatible Modules	FactoryTalk® View SE Faceplate	FactoryTalk® View ME Faceplate

		Duplex	(raC-5_03-SE) raC_Dvc_5015_U8IHFTXT_Duplex-Faceplate.gfx	(raC-5_01-ME) raC_Dvc_5015_U8IHFTXT_Duplex-Faceplate.gfx

## Studio 5000 View Designer HMI Files

All Studio 5000 View Designer Files can be found in the */HMI - ViewDesigner - vpd/* folder of the library. Each I/O family (e.g. 1756) has a single .VPD file which contains faceplate screens for all I/O modules in that family.

Family	View Designer File	Module	Variation	View Designer Screen
5015	raC_Dvc_5015U_wDesc.vpd	5015-U8IHFTXT	Simplex	raC_Dvc_5015-U8IHFTXT_Simplex_wDesc_FP
			Duplex	raC_Dvc_5015-U8IHFTXT_Duplex_wDesc_FP

## Studio 5000® Application Code Manager Files

Studio 5000® Application Code Manager (ACM) can be optionally used if it is installed. All devices can be easily registered in the ACM repositories by running the *setup.cmd* file located in the root folder of the library.

Individual HSL4 files are provided as an alternative to running the *setup.cmd* to allow users to manually register specific implementation objects. Each object has two files - an Asset Control file and a Device file. The Module files include attachments of all required files for that object.

All Studio 5000® Application Code Manager files can be found in the */ApplicationCodeManagerLibraries/* folder of the library. The files included are as follows:

Family	Module	Application Code Manager File
5015	5015-U8IHFTXT	(RA-LIB)_ACM_2.00_Module_Universal_5015-U8IHFTXT_(5.3).HSL4

## Graphic Symbols

Graphic Symbols are used as launch buttons within HMI applications to open up faceplate displays. A generic rectangular pushbutton with a text label can be used, or a graphical style button with abnormal indicator icons can be used. See [Basic Launch Button Attributes](#) section for details on configuration and indicators.

## FactoryTalk® View ME/SE Graphic Symbols

Graphic Symbol Name	Description	Global Object Parameter Values	Graphic Symbol
G0_GotoDisplay	Faceplate navigation button with string tag label.	#102: Faceplate Display Name #103: IO Module Input Tag #105: Custom button label. Leave blank to use Tag.@Description #120: Display's left position #121: Display's top position	
G0_LaunchSpeciality_50xx	Use with 5069 Specialty Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	

## Studio 5000 View Designer® Graphic Symbols

All Studio 5000 View Designer® graphic symbols must be configured with an *Event* to open up the appropriate Popup screen. Select the graphic symbol and in the *Properties* window navigate to the *Events* tab. Assign a *Button Behavior* event to *Open popup on release*. Assign the required Popup screen (e.g. User-Defined Screens\raC\_5\_02\_Dvc\_1756OB16D\_wDesc\_FP). The required *Property Configurations* are found in the following table where you may assign an *InitialTab* to 11 to ensure the pop-up opens on the Home Tab, and assign the *Module\_InputTag* to the module's :I controller tag (e.g. ::PAC.Local:3:I).

Graphic Symbol Name	Description	Properties - Events Configuration	Graphic Symbol
Button_001	Faceplate navigation button with string tag label. Use Properties > General > Text to modify the button label text.	InitialTab: 11 Module_InputTag: IO Module Input Tag	
G0_LaunchSpeciality_50xx	Use with 50xx Specialty Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	

# Faceplates

There are basic faceplate attributes that are common across all instructions. See [Basic Faceplate Attributes on page 40](#).

In this document, the faceplate pictures (or snapshots) are shown in FactoryTalk® View ME. Faceplates will look similar in FactoryTalk® View SE or Studio 5000 View Designer®. Number of I/O channels and minor details may vary depending on the exact I/O module.

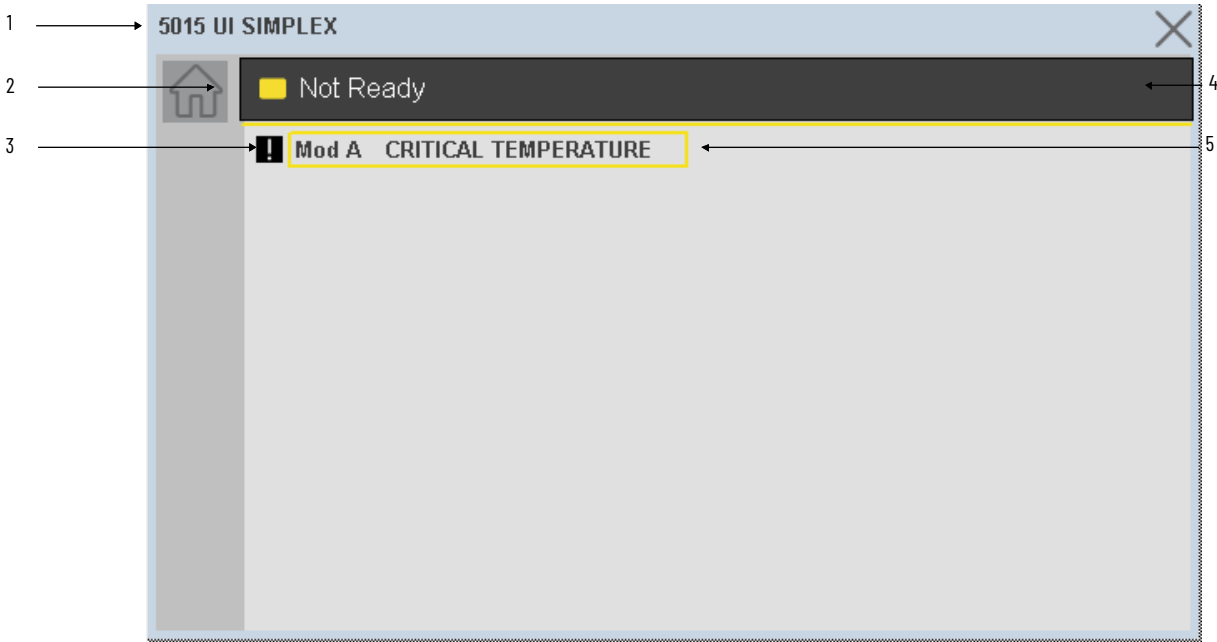

The faceplate title is linked to *Module:I.@description*, the *.@description* extended tag property of the module's input tag instance. This is user-configurable from controller/program tags in Studio 5000 Logix Designer.

Name	Description	Data Type
▶ R1756:2:I	1756-SOE	AB:1756_SOE_16PointCIPSync:I:0
▶ R1756:2:C	1756-SOE	AB:1756_SOE:C:1

▶ R1756:8:I	1756-IB32	AB:1756_DI:I:0

## Home

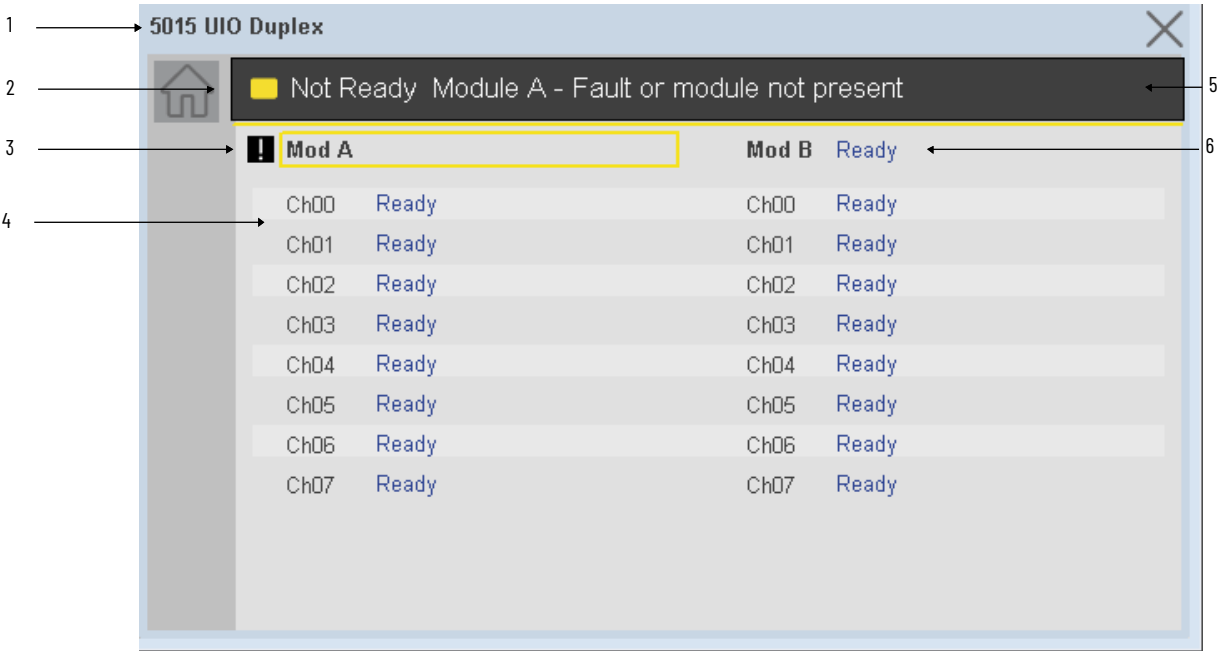

The Home tab is the main tab of the faceplate. I/O channel data and fault information. The banner at the top of the faceplate displays module status and fault information.

5015 Universal I/O Simplex Mode

Item	Description
1	Faceplate title bar. Display's Module:I.@Description
2	Module ready status.
	GREEN = Ready  Ready
	YELLOW = Module Fault/Not Ready  Not Ready
3	Module Fault Indication. "!" icon and yellow border.
4	Module/Channel Fault status text. May display the following: - Connection faulted
5	Module Fault Description: - Internal Fault - Critical Temperature - Over Temperature - RTB Fault - System Power A Fault - System Power B Fault - Backplane A Fault - Backplane B Fault

5015 Universal I/O Duplex Mode

Item	Description
1	Faceplate title bar. Display's Module:I.@Description
2	Module ready status.
	GREEN = Ready  Ready
	YELLOW = Module Fault/Not Ready  Not Ready
3	Module Fault Indication. "!" icon and yellow border.
4	Channel Diagnostic Status: - Ready - Diagnostic Active
5	Module/Channel Fault status text. May display the following: - Connection faulted - Module A - Fault or module not present - Module B - Fault or module not present - Module A Channel Fault Exists - Module B Data Shown - Module B Channel Fault Exists - Module A Data Shown
6	Module Ready/Fault Description: - Ready - Internal Fault - Critical Temperature - Over Temperature - RTB Fault - System Power A Fault - System Power B Fault - Backplane A Fault - Backplane B Fault - Flash Update Fault - Missing Fault - Product Type Fault - Revision Fault - Ownership Fault

## Application Code Manager

The IO Device Library can be used with Studio 5000® Application Code Manager to configure all required I/O for a project. All I/O modules can be found in the (RA-LIB) ACM 2.00 Library within the *Module* folder.

Refer to the section [Using Application Code Manager](#) for complete details.

## Module Object Parameters

Each module object (e.g. 5015-U8IHFTEXT) has parameters which can be configured in Studio 5000® Application Code Manager prior to Controller code generation.

Parameter Name	Default Value	Description
FPLaunch_Button_Label	[ModuleName]	Module:I.@Description tag and shown on basic text launch buttons.
SEAssocDisplay		Associated HMI SE Display
MEAssocDisplay		Associated HMI ME Display
SlotDuplex	0	This is the slot that this module is located in. Note that duplex module consume 2 slots.
RPI	20	This is the RPI of the module (ms).
ChassisName	[ChassisName]	This is the Chassis that this module is located in.
ChxAssignment	Undefined	Channel Type - Undefined - Digital - Input - Digital - Output - Analog - Input - Analog - Output
Redundancy	Simplex	Simplex (single module) or Duplex (dual module)
Symbolstyle	GraphicalButton	FTView HMI launch button symbol style.

## Configured HMI Content

## Digital Input Safety Modules

### Overview

Digital input safety module objects include Studio 5000® Application Code Manager modules and HMI faceplates for FactoryTalk® View ME/SE and Studio 5000 View Designer®. HMI faceplates provide the following information:

- Module description, status, and faults
- Channel description, status and detailed faults
- Module diagnostic status and count (1756/5069/5094)

Some Safety I/O modules are provided with multiple configuration options. The most popular variations are available in this library. These can be configured using Application Code Manager. Unique faceplates for each variation are provided. These may include:

- Safety
- Safety Test Output
- Safety Muting

### Required Files

IO Device Objects include HMI faceplates. There is no controller programming required other than the creation of the I/O module in the project. If using FactoryTalk® View ME/SE you must also import the tag import file *FTViewStudio\_IOLibrary\_Tags\_5\_00.CSV* to support navigation on faceplates with multiple tabs or pages.

Note that the revision numbers (e.g. 5.01) used in filenames below can change as new revisions are created.

### FactoryTalk® View HMI Files

FactoryTalk® View ME/SE applications require importing the desired device faceplates in addition to all Global Object (ggfx) files and all images located in the */HMI FactoryTalk® View Images - png/* folder of the library. FactoryTalk® View ME files are stored in the */HMI - FactoryTalk View ME/* library folder and FactoryTalk® View SE files are stored in the */HMI - FactoryTalk View SE/* library folder.

#### GGFX Global Object Files

Studio 5000 View Designer® Graphic Symbols

All Studio 5000 View Designer® graphic symbols must be configured with an *Event* to open up the appropriate Popup screen. Select the graphic symbol and in the *Properties* window navigate to the *Events* tab. Assign a *Button Behavior* event to *Open popup on release*. Assign the required Popup screen (e.g. User-Defined Screens\raC\_5\_02\_Dvc\_1756OB16D\_wDesc\_FP). The required *Property Configurations* are found in the following table where you may assign an *InitialTab* to 11 to ensure the pop-up opens on the Home Tab, and assign the *Module\_InputTag* to the module's :I controller tag (e.g. ::PAC.Local:3:I).

Graphic Symbol Name	Description	Properties - Events Configuration	Graphic Symbol
Button_001	Faceplate navigation button with string tag label. Use Properties > General > Text to modify the button label text.	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_LaunchSafetyIn_1756	Use with 1756 Safety DC Input Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_LaunchSafetyDI_1745	Use with 1734 SafetyDC Input Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_LaunchDCIn_50xx	Use with 1719/5069/5015 DC Input Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_Launch_DCIn_5094	Use with 5094 DC Input Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	
GO_Launch_InSafety_Armor	Use with 1732ES Safety Input Only Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag	

## Faceplates

There are basic faceplate attributes that are common across all instructions. See [Basic Faceplate Attributes on page 40](#).

In this document, the faceplate pictures (or snapshots) are shown in FactoryTalk® View ME. Faceplates will look similar in FactoryTalk® View SE or Studio 5000 View Designer®. Number of I/O channels and minor details may vary depending on the exact I/O module.

The faceplate title is linked to *Module:I.@description*, the *.@description* extended tag property of the module's input tag instance. This is user-configurable from controller/program tags in Studio 5000 Logix Designer.

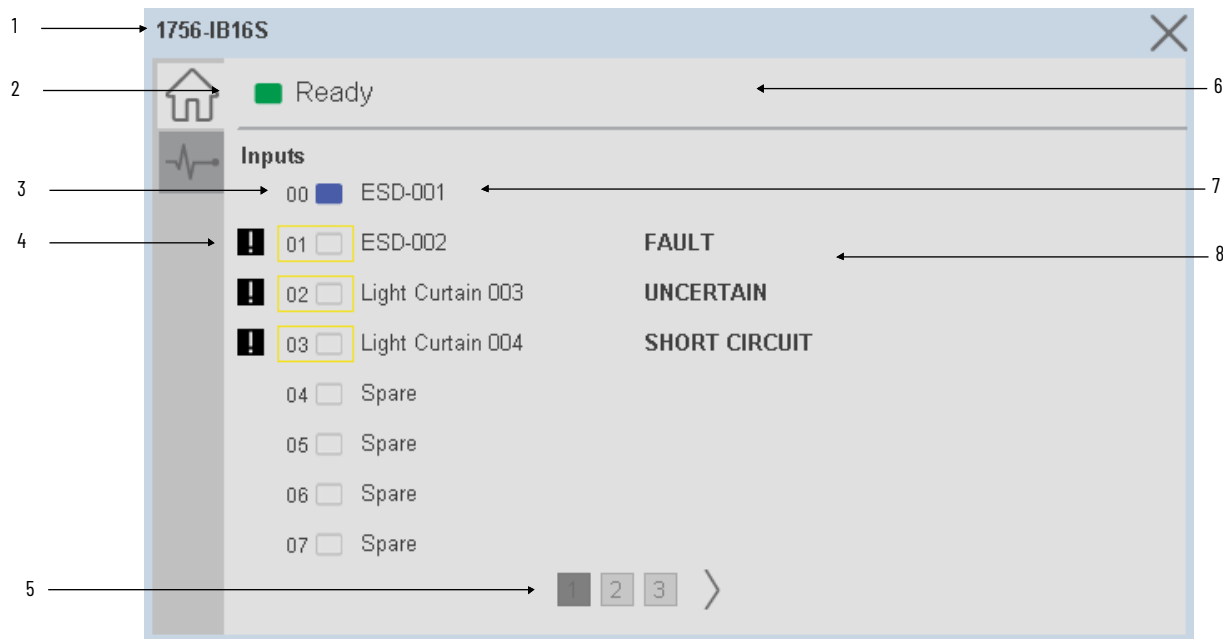

Name	Description	Data Type
▶ R1756:2:I	1756-SOE	AB:1756_SOE_16PointCIPSync:I:0
▶ R1756:2:C	1756-SOE	AB:1756_SOE:C:1
▶ R1756:7:I	1756-OF8H	AB:1756_OF8H_AnalogHARTbyChannel...
▶ R1756:11:I	1756-OF8	AB:1756_OF8_Float:I:0
▶ R1756:6:I	1756-OBV8S Sourcing	AB:5000_SDO8:I:0
▶ R1756:10:I	1756-OB32	AB:1756_DO:I:0
▶ R1756:5:I	1756-OB16D	AB:1756_DO_DC_Diag:I:0
▶ R1756:4:I	1756-IF16H	AB:1756_IF16H_AnalogHARTbyChannel...
▶ R1756:9:I	1756-IF8	AB:1756_IF8_Float:I:0
▶ R1756:8:I	1756-IB32	AB:1756_DI:I:0

The I/O channel descriptions are linked to the channel's primary data tag *.@Description* field. For Digital Input modules this is the individual I.Ptxx.Data BOOL tags. Failure to fill in these tags will result in HMI diagnostic errors. These tags can be filled out using Studio 5000 Application Code Manager.

Name	Description	Data Type
▲ R1756:3:I.Pt00	1756-IB16S	CHANNEL_SDI:I:0
R1756:3:I.Pt00.Data	ESD-001	BOOL

## Home

The Home tab is the main tab of the faceplate. I/O channel data and fault information. The banner at the top of the faceplate displays module status and fault information.

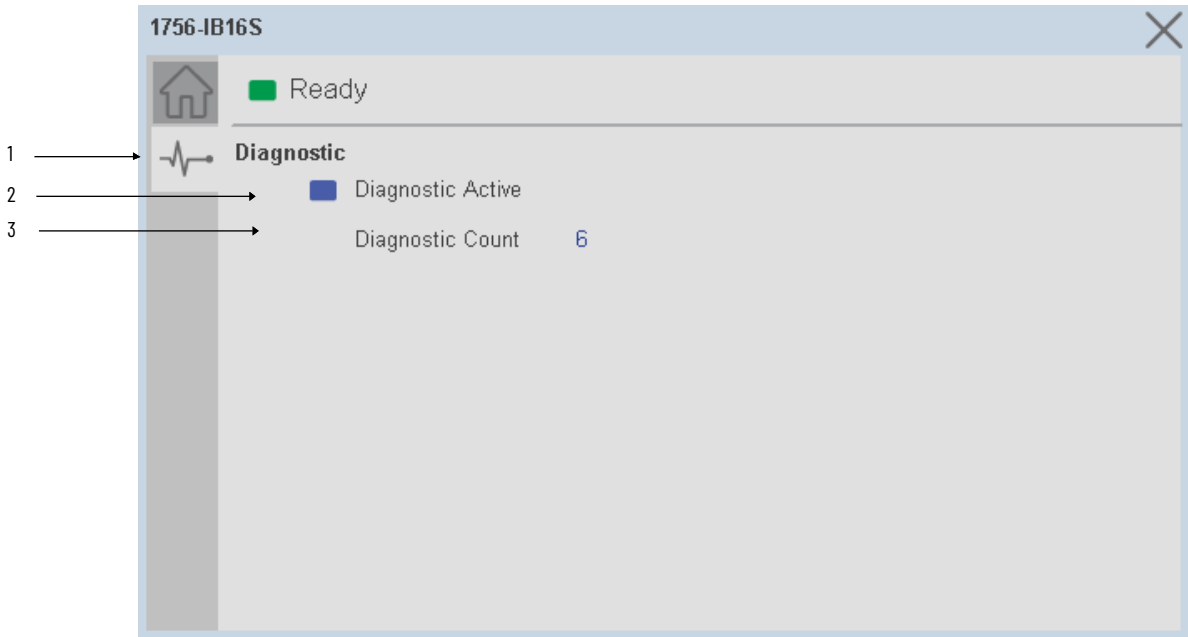

Item	Description	
1	Faceplate title bar. Display's Module:I.@Description	
2	Module ready status.	
	GREEN = Ready	 Ready
	YELLOW = Module Fault/Not Ready	 Not Ready
3	Channel Status	
	BLUE = Active/High	
	GREY = Inactive/Low	
4	Channel Fault Indication. "!" icon and yellow border.	
5	Page navigation; used for modules with more than 16 channels.	
6	Module/Channel Fault status text. May display the following: - Module Fault - All Channel Data remains at last pre-fault state - Channel Fault Exists - Data remains at last pre-fault state	
7	Channel description. Module:I.Ptxx.Data.@Description	
8	Channel Fault Description: - Fault - Short Circuit (1756/5094/5069 only) - Uncertain (1756/5094/5069 only)	

Diagnostic Tab

The Diagnostic tab is available only for 1756, 5094 and 5069 Safety I/O modules. This tab displays the Diagnostic Active status and the Diagnostic Count.

Item	Description	
1	Diagnostic tab navigation button	
2	Diagnostic Active Status	
	BLUE = Active/High	
	GREY = Inactive/Low	
3	Diagnostic Count	

## Application Code Manager

The IO Device Library can be used with Studio 5000® Application Code Manager to configure all required I/O for a project. All I/O modules can be found in the (RA-LIB) ACM 2.00 Library within the *Module* folder.

Refer to the section [Using Application Code Manager](#) for complete details.

## Module Object Parameters

Each module object (e.g. 1756-IB16S) has parameters which can be configured in Studio 5000® Application Code Manager prior to Controller code generation.

Parameter Name	Default Value	Description
ChxDescription		Channel tag description used in Module:I.Data.x.@Description tag and shown on HMI faceplates.
FPLaunch_Button_Label	[ModuleName]	Module:I.@Description tag and shown on basic text launch buttons.
SEAssocDisplay		Associated HMI SE Display
MEAssocDisplay		Associated HMI ME Display
Slot	Next Available	This is the slot that this module is located in.
RPI	20	This is the RPI of the module (ms).
ChassisName	[ChassisName]	This is the Chassis that this module is located in.
PointMode	Safety	Select the operation mode of the Points. Selections may vary depending on specific module. Options may include: - Safety - SafetyPulseTest - SafetyMuting - SafetyTestOutput
NavigationButton	GraphicalButton	Select Navigation Button Type

## Configured HMI Content

HMI Content	Instance Name	Description
Launch Button	GO_LaunchFP	Global Object generic rectangular text launch button
Launch Button	GO_LaunchSafetyIn_1756	Use with 1756 Safety DC Input Modules
Launch Button	GO_LaunchSafetyDI_1745	Use with 1734 SafetyDC Input Modules
Launch Button	GO_LaunchDCIn_50xx	Use with 1719/5069/5015 DC Input Modules
Launch Button	GO_Launch_DCIn_5094	Use with 5094 DC Input Modules
Launch Button	GO_Launch_InSafety_Armor	Use with 1732ES Safety Input Only Modules

## Digital Output Safety Modules

### Overview

Digital Output and combination Digital Input/Output safety module objects include Studio 5000® Application Code Manager modules and HMI faceplates for FactoryTalk® View ME/SE and Studio 5000 View Designer®. HMI faceplates provide the following information:

- Module description, status, and faults
- Channel description, status and detailed faults
- Module diagnostic status and count (1756/5069/5094)

Some Safety I/O modules are provided with multiple configuration options. The most popular variations are available in this library. These can be configured using Application Code Manager. Unique faceplates for each variation are provided. These may include:

- Safety
- Safety Bipolar
- Safety Sourcing

### Required Files

IO Device Objects include HMI faceplates. There is no controller programming required other than the creation of the I/O module in the project. If using FactoryTalk® View ME/SE you must also import the tag import file *FTViewStudio\_IOLibrary\_Tags\_5\_00.CSV* to support navigation on faceplates with multiple tabs or pages.

Note that the revision numbers (e.g. 5.01) used in filenames below can change as new revisions are created.

### FactoryTalk® View HMI Files

FactoryTalk® View ME/SE applications require importing the desired device faceplates in addition to all Global Object (ggfx) files and all images located in the */HMI FactoryTalk® View Images - png/* folder of the library. FactoryTalk® View ME files are stored in the */HMI - FactoryTalk View ME/* library folder and FactoryTalk® View SE files are stored in the */HMI - FactoryTalk View SE/* library folder.

#### GGFX Global Object Files

## Studio 5000 View Designer HMI Files

All Studio 5000 View Designer Files can be found in the */HMI - ViewDesigner - vpd/* folder of the library. Each I/O family (e.g. 1756) has a single .VPD file which contains faceplate screens for all I/O modules in that family.

Family	View Designer File	Module	Variation	View Designer Screen
1734	raC_Dvc_1734IO_wDesc.vpd	1734-0B8S	Safety	raC_Dvc_1734-0B8S_Safety_wDesc_FP

## Studio 5000® Application Code Manager Files

Studio 5000® Application Code Manager (ACM) can be optionally used if it is installed. All devices can be easily registered in the ACM repositories by running the *setup.cmd* file located in the root folder of the library.

Individual HSL4 files are provided as an alternative to running the *setup.cmd* to allow users to manually register specific implementation objects. Each object has two files - an Asset Control file and a Device file. The Module files include attachments of all required files for that object.

All Studio 5000® Application Code Manager files can be found in the / *ApplicationCodeManagerLibraries/* folder of the library. The files included are as follows:

Family	Module	Variation	Application Code Manager File
1734	1734-OB8S	Safety	(RA-LIB)_ACM_2.00_Module_Digital_1734-OB8S_(5.3).HSL4
	1734-OBV2S	Safety	(RA-LIB)_ACM_2.00_Module_Digital_1734-OBV2S_(5.3).HSL4
1732ES	1732ES-IB12XOB4	Safety	(RA-LIB)_ACM_2.00_Module_Digital_1732ES-IB12XOB4_(5.3).HSL4
		SafetyTestOutput	
	1732ES-IB12XOBV2	Safety	(RA-LIB)_ACM_2.00_Module_Digital_1732ES-IB12XOBV2_(5.3).HSL4
		SafetyTestOutput	
	1732ES-IB8XOB8	Safety	(RA-LIB)_ACM_2.00_Module_Digital_1732ES-IB8XOB8_(5.3).HSL4
		SafetyTestOutput	
1756	1756-OBV8S	SafetyBipolar	(RA-LIB)_ACM_2.00_Module_Digital_1756-OBV8S_(5.3).HSL4
		1756-OB16IS	(RA-LIB)_ACM_2.00_Module_Digital_1756-OB16IS_(5.3).HSL4
		SafetySourcing	(RA-LIB)_ACM_2.00_Module_Digital_1756-OBV8S_(5.3).HSL4

		SafetySourcing	(RA-LIB)_ACM_2.00_Module_Digital_5069-OBV8S_(5.3).HSL4
5094	5094-OB16S	Safety	(RA-LIB)_ACM_2.00_Module_Digital_5094-OB16S_A_(5.3).HSL4
	5094-OW4IS		(RA-LIB)_ACM_2.00_Module_Digital_5094-OW4IS_(5.3).HSL4
	5094-OW4ISXT		(RA-LIB)_ACM_2.00_Module_Digital_5094-OW4ISXT_(5.3).HSL4
	5094-OB16SXT		(RA-LIB)_ACM_2.00_Module_Digital_5094-OB16SXT_A_(5.3).HSL4

## Graphic Symbols

Graphic Symbols are used as launch buttons within HMI applications to open up faceplate displays. A generic rectangular pushbutton with a text label can be used, or a graphical style button with abnormal indicator icons can be used. See [Basic Launch Button Attributes](#) section for details on configuration and indicators.

### FactoryTalk® View ME/SE Graphic Symbols

Graphic Symbol Name	Description	Global Object Parameter Values	Graphic Symbol
GO_GotoDisplay1	Faceplate navigation button with string tag label.	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #105: Custom button label. Leave blank to use Tag.@Description #120: Display's left position #121: Display's top position

## Studio 5000 View Designer® Graphic Symbols

All Studio 5000 View Designer® graphic symbols must be configured with an *Event* to open up the appropriate Popup screen. Select the graphic symbol and in the *Properties* window navigate to the *Events* tab. Assign a *Button Behavior* event to *Open popup on release*. Assign the required Popup screen (e.g. User-Defined Screens\raC\_5\_02\_Dvc\_1756OB16D\_wDesc\_FP). The required *Property Configurations* are found in the following table where you may assign an *InitialTab* to 11 to ensure the pop-up opens on the Home Tab, and assign the *Module\_InputTag* to the module's :I controller tag (e.g. ::PAC.Local:3:I) and *Module\_OutputTag* to the module's :O controller tag (e.g. ::PAC.Local:3:O).

Graphic Symbol Name	Description	Properties - Events Configuration	Graphic Symbol
Button_001	Faceplate navigation button with string tag label. Use Properties > General > Text to modify the button label text.	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_LaunchSafetyIn_1756	Use with 1756 Safety DC Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_LaunchSafetyDI_1734	Use with 1734 SafetyDC Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_LaunchDCOut_50xx	Use with 1719/5069/5015 DC Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_LaunchSafetyOut_1756	Use with 1756 Safety AC Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_LaunchSafetyDO_1734	Use with 1734 Safety AC Output Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag

# Faceplates

There are basic faceplate attributes that are common across all instructions. See [Basic Faceplate Attributes on page 40](#).

In this document, the faceplate pictures (or snapshots) are shown in FactoryTalk® View ME. Faceplates will look similar in FactoryTalk® View SE or Studio 5000 View Designer®. Number of I/O channels and minor details may vary depending on the exact I/O module.

The faceplate title is linked to *Module:I.@description*, the *.@description* extended tag property of the module's input tag instance. This is user-configurable from controller/program tags in Studio 5000 Logix Designer.

Name	Description	Data Type
▶ R1756:2:I	1756-SOE	AB:1756_SOE_16PointCIPSync:I:0
▶ R1756:2:C	1756-SOE	AB:1756_SOE:C:1
▶ R1756:7:I	1756-OF8H	AB:1756_OF8H_AnalogHARTbyChannel...
▶ R1756:11:I	1756-OF8	AB:1756_OF8_Float:I:0
▶ R1756:6:I	1756-OBV8S Sourcing	AB:5000_SD08:I:0
▶ R1756:10:I	1756-OB32	AB:1756_DO:I:0
▶ R1756:5:I	1756-OB16D	AB:1756_DO_DC_Diag:I:0
▶ R1756:4:I	1756-IF16H	AB:1756_IF16H_AnalogHARTbyChannel...
▶ R1756:9:I	1756-IF8	AB:1756_IF8_Float:I:0
▶ R1756:8:I	1756-IB32	AB:1756_DI:I:0

The I/O channel descriptions are linked to the channel's primary data tag *.@Description* field. For Digital Input modules this is the individual O.Ptxx.Data BOOL tags. Failure to fill in these tags will result in HMI diagnostic errors. These tags can be filled out using Studio 5000 Application Code Manager.

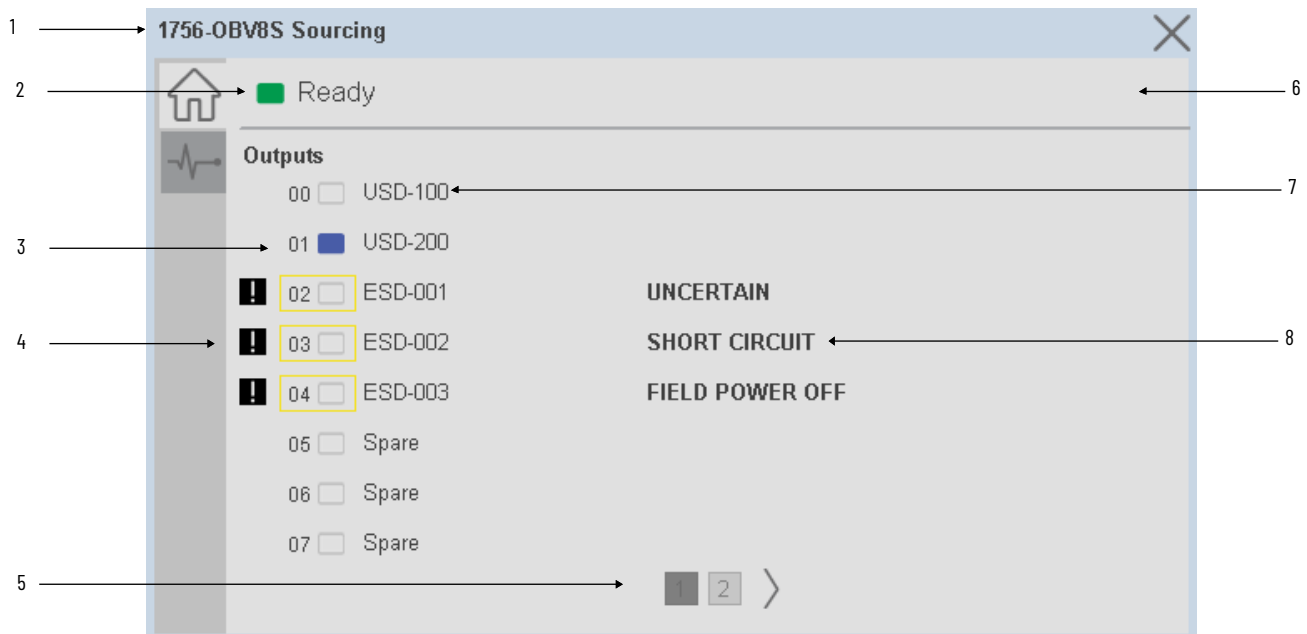

Name	Description	Data Type
▲ R1756:6:O.Pt00		CHANNEL_SDO:O:0
R1756:6:O.Pt00.Data	USD-100	BOOL
R1756:6:O.Pt00.ResetFault		BOOL

## Home

The Home tab is the main tab of the faceplate. I/O channel data and fault information. The banner at the top of the faceplate displays module status and fault information.

### Home Page - Outputs

The first page(s) of the home tab displays Output channels. 8 channels will be shown per page; depending on the exact model this data may be shown on page 1 or page 1 and page 2.

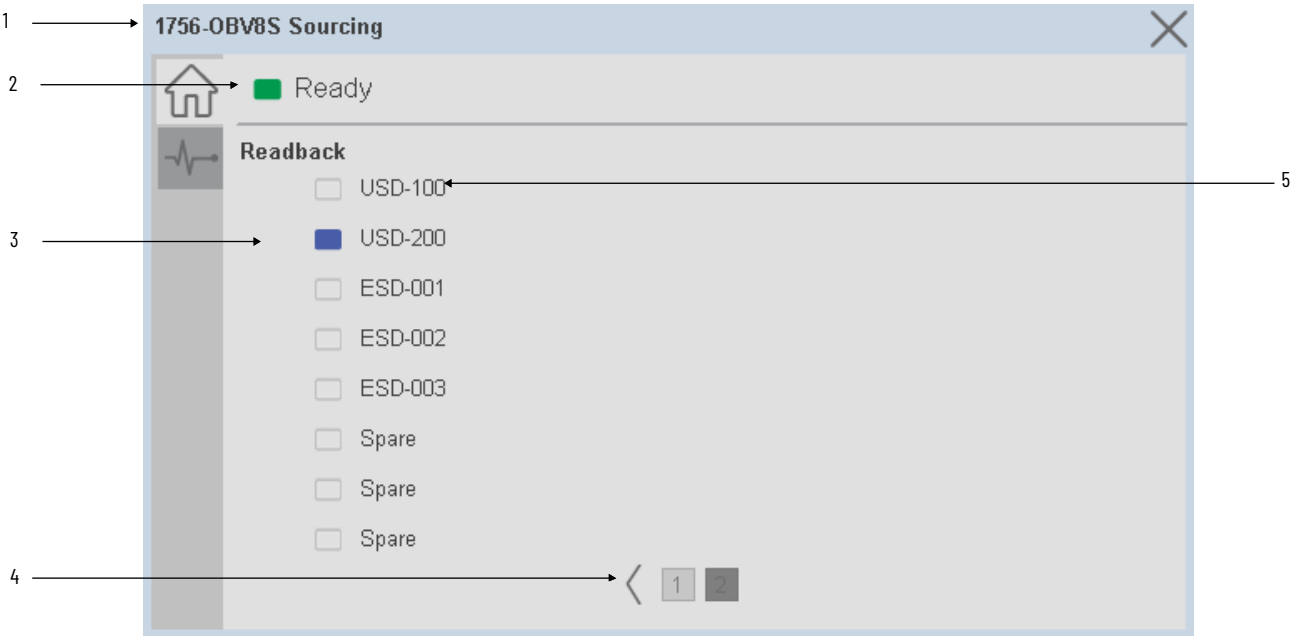

Item	Description
1	Faceplate title bar. Display's Module:I.@Description
2	Module ready status.
	GREEN = Ready
	YELLOW = Module Fault/Not Ready

Item	Description	
3	Channel Status	
	BLUE = Active/High	
	GREY = Inactive/Low	
4	Channel Fault Indication. "!" icon and yellow border. This is correlated to the Module:0.Ptxx.Status tag where 0 = fault.	
5	Page navigation; used for modules with more than 16 channels.	
6	Module/Channel Fault status text. May display the following: - Module Fault - All Channel Data remains at last pre-fault state - Channel Fault Exists - Data remains at last pre-fault state	
7	Channel description. Module:0.Ptxx.Data.@Description	
8	Channel fault description - Field Power Off (1756/5069/5094 only) - Channel Fault - Short Circuit (1756/5069/5094 only) - Uncertain (1756/5069/5094 only)	

Home Page - Readback

The next page of the home tab displays readback channels. 8 channels will be shown per page; depending on the exact model this data may be shown on page 2or page 3and page 4.

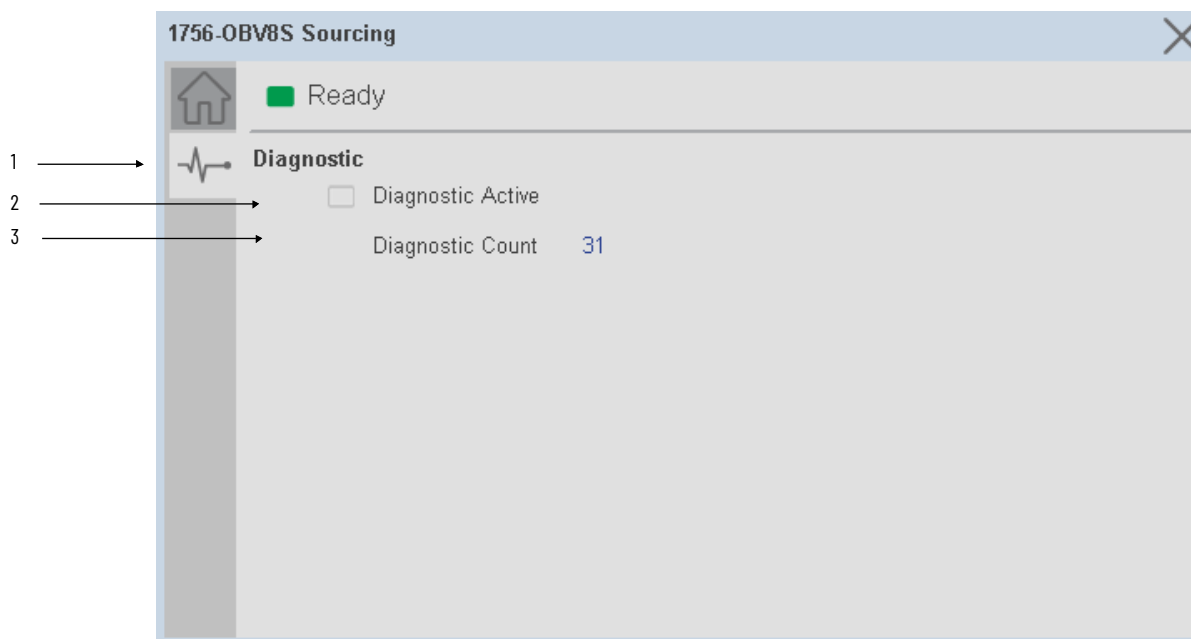

Item	Description	
1	Faceplate title bar. Display's Module:I.@Description	
2	Module ready status.	
	GREEN = Ready	 Ready
	YELLOW = Module Fault/Not Ready	 Not Ready

Item	Description	
3	Channel Status	
	BLUE = Active/High	
	GREY = Inactive/Low	
4	Page navigation; used for modules with more than 16 channels.	
5	Channel description. Module:I.Ptxx.Readback.@Description	

## Diagnostic Tab

The Diagnostic tab is available only for 1756, 5094 and 5069 Safety I/O modules. This tab displays the Diagnostic Active status and the Diagnostic Count.

Item	Description	
1	Diagnostic tab navigation button	
2	Diagnostic Active Status	
	BLUE = Active/High	
	GREY = Inactive/Low	
3	Diagnostic Count	

## Application Code Manager

The IO Device Library can be used with Studio 5000® Application Code Manager to configure all required I/O for a project. All I/O modules can be found in the (RA-LIB) ACM 2.00 Library within the *Module* folder.

Refer to the section [Using Application Code Manager](#) for complete details.

Module Object Parameters

Each module object (e.g. 1756-OBV8S) has parameters which can be configured in Studio 5000® Application Code Manager prior to Controller code generation.

Parameter Name	Default Value	Description
OUTChxDescription		Channel tag description used in Module:0.Data.x.@Description tag and shown on HMI faceplates.
READBACKChXDescription		Channel tag description used in studio 5000 and HMI faceplate.
FPLaunch_Button_Label	[ModuleName]	Module:I.@Description tag and shown on basic text launch buttons.
SEAssocDisplay		Associated HMI SE Display
MEAssocDisplay		Associated HMI ME Display
Slot	Next Available	This is the slot that this module is located in.
RPI	20	This is the RPI of the module (ms).
ChassisName	[ChassisName]	This is the Chassis that this module is located in.
PointMode	Safety	Select the operation mode of the Points. Selections may vary depending on specific module. Options may include: - Safety - SafetyPulseTest
NavigationButton	GraphicalButton	Select navigation button type

Configured HMI Content

HMI Content	Instance Name	Description
Launch Button	GO_LaunchFP	Global Object generic rectangular text launch button
Launch Button	GO_LaunchSafetyIn_1756	Use with 1756 Safety DC Output Modules
Launch Button	GO_LaunchSafetyDI_1734	Use with 1734 SafetyDC Output Modules
Launch Button	GO_LaunchDCOut_50xx	Use with 1719/5069/5015 DC Output Modules
Launch Button	GO_LaunchSafetyOut_1756	Use with 1756 Safety AC Output Modules
Launch Button	GO_LaunchSafetyDO_1734	Use with 1734 Safety AC Output Modules
Launch Button	GO_LaunchDCOut_50xx	Use with 1719/5069/5015 AC Output Modules

Launch Button	GO_Launch_DCOut_5094	Use with 5094 DC Output Modules
Launch Button	GO_Launch_ACOut_5094	Use with 5094 AC Output Modules
Launch Button	GO_Launch_InOutSafety_Ar mor	Use with 1732ES Safety Input/Output Modules

## Sequence of Event (SOE) Modules

### Overview

Sequence of event (SOE) module objects include Studio 5000® Application Code Manager modules and HMI faceplates for FactoryTalk® View ME/SE and Studio 5000 View Designer®. HMI faceplates provide the following information:

- Module description, status, and faults
- Channel description, status and faults
- Event on/off timestamps and new data indications

The 1756-IB16ISOE and 1756-IH16SOE modules have multiple module configuration options. A single HMI faceplate is provided for both modules supporting two configurations. Using Application Code Manager you can select the desired configuration from the following options:

- CIP Sync Per Point
- CST Per Point

FIFO configurations are not supported with Application Code Manager or HMI faceplates at this time.

### Required Files

IO Device Objects include HMI faceplates. There is no controller programming required other than the creation of the I/O module in the project. If using FactoryTalk® View ME/SE you must also import the tag import file *FTViewStudio\_IOLibrary\_Tags\_5\_00.CSV* to support navigation on faceplates with multiple tabs or pages.

Note that the revision numbers (e.g. 5.01) used in filenames below can change as new revisions are created.

### FactoryTalk® View HMI Files

FactoryTalk® View ME/SE applications require importing the desired device faceplates in addition to all Global Object (ggfx) files and all images located in the */HMI FactoryTalk® View Images - png/* folder of the library. FactoryTalk® View ME files are stored in the */HMI - FactoryTalk View ME/* library folder and FactoryTalk® View SE files are stored in the */HMI - FactoryTalk View SE/* library folder.

*GGFX Global Object Files*

		CST Per Point		
	1756-1H16ISOE	CIP Sync Per Point		
		CST Per Point		

**Studio 5000 View Designer HMI Files**

All Studio 5000 View Designer Files can be found in the */HMI - ViewDesigner - vpd/* folder of the library. Each I/O family (e.g. 1756) has a single .VPD file which contains faceplate screens for all I/O modules in that family.

Family	View Designer File	Module	Variation	View Designer Screen
1756	raC_Dvc_1756IO_wDesc.vpd	1756-1B16ISOE	CIP Sync Per Point	raC_Dvc_1756-1x16ISOE_wDesc_FP
			CST Per Point	
		1756-1H16ISOE	CIP Sync Per Point	
			CST Per Point	

**Studio 5000® Application Code Manager Files**

Studio 5000® Application Code Manager (ACM) can be optionally used if it is installed. All devices can be easily registered in the ACM repositories by running the *setup.cmd* file located in the root folder of the library.

Individual HSL4 files are provided as an alternative to running the *setup.cmd* to allow users to manually register specific implementation objects. Each object has two files - an Asset Control file and a Device file. The Module files include attachments of all required files for that object.

All Studio 5000® Application Code Manager files can be found in the */ApplicationCodeManagerLibraries/* folder of the library. The files included are as follows:

Family	Module	Variation	Application Code Manager File
1756	1756-IB16ISOE	CIP Sync Per Point	(RA-LIB)_ACM_2.00_Module_Digital_1756-IB16ISOE_A_(5.2).HSL4
		CST Per Point	
	1756-IH16ISOE	CIP Sync Per Point	(RA-LIB)_ACM_2.00_Module_Digital_1756-IH16ISOE_A_(5.2).HSL4
		CST Per Point	

## Graphic Symbols

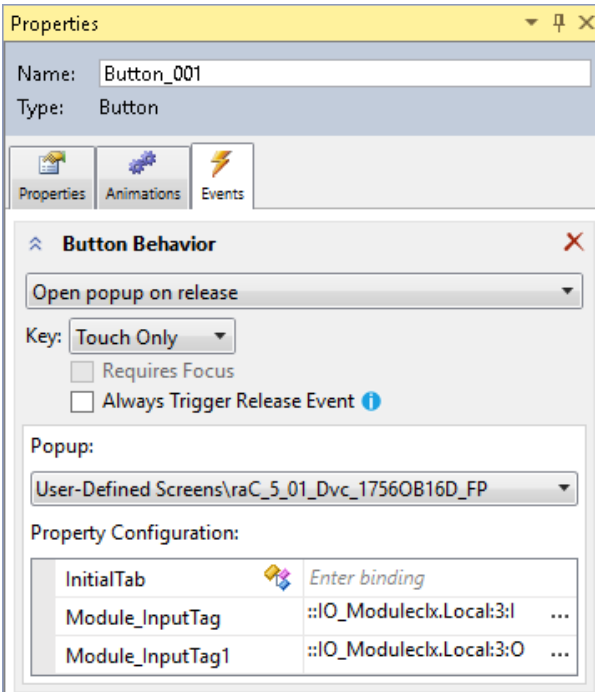

Graphic Symbols are used as launch buttons within HMI applications to open up faceplate displays. A generic rectangular pushbutton with a text label can be used, or a graphical style button with abnormal indicator icons can be used. See [Basic Launch Button Attributes](#) section for details on configuration and indicators.

### FactoryTalk® View ME/SE Graphic Symbols

Graphic Symbol Name	Description	Global Object Parameter Values	Graphic Symbol
G0_GotoDisplay1	Faceplate navigation button with string tag label.	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #105: Custom button label. Leave blank to use Tag.@Description #120: Display's left position #121: Display's top position	
G0_LaunchSOESerial_17xx	Use with 17xx SOE and SERIAL Modules	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #120: Display's left position #121: Display's top position	

### Studio 5000 View Designer® Graphic Symbols

All Studio 5000 View Designer® graphic symbols must be configured with an *Event* to open up the appropriate Popup screen. Select the graphic symbol and in the *Properties* window navigate to the *Events* tab. Assign a *Button Behavior* event to *Open popup on release*. Assign the required Popup screen (e.g. User-Defined Screens\raC\_5\_02\_Dvc\_1756\_Ix16ISOE-FP). The required *Property Configurations* are found in the following table where you may assign an *InitialTab* to 11 to ensure the pop-up opens on the Home Tab, and assign the *Module\_InputTag* to the module's :I controller tag (e.g. ::PAC.Local:3:I) and *Module\_OutputTag* to the module's :O controller tag (e.g. ::PAC.Local:3:O).

Graphic Symbol Name	Description	Properties - Events Configuration	Graphic Symbol
Button_001	Faceplate navigation button with string tag label. Use Properties > General > Text to modify the button label text.	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
GO_LaunchSOESerial_17xx	Use with 17xx SOE and SERIAL Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	

Faceplates

There are basic faceplate attributes that are common across all instructions. See [Basic Faceplate Attributes on page 40](#).

In this document, the faceplate pictures (or snapshots) are shown in FactoryTalk® View ME. Faceplates will look similar in FactoryTalk® View SE or Studio 5000 View Designer®. Number of I/O channels and minor details may vary depending on the exact I/O module.

The faceplate title is linked to *Module:I.@description*, the *.@description* extended tag property of the module’s input tag instance. This is user-configurable from controller/program tags in Studio 5000 Logix Designer.

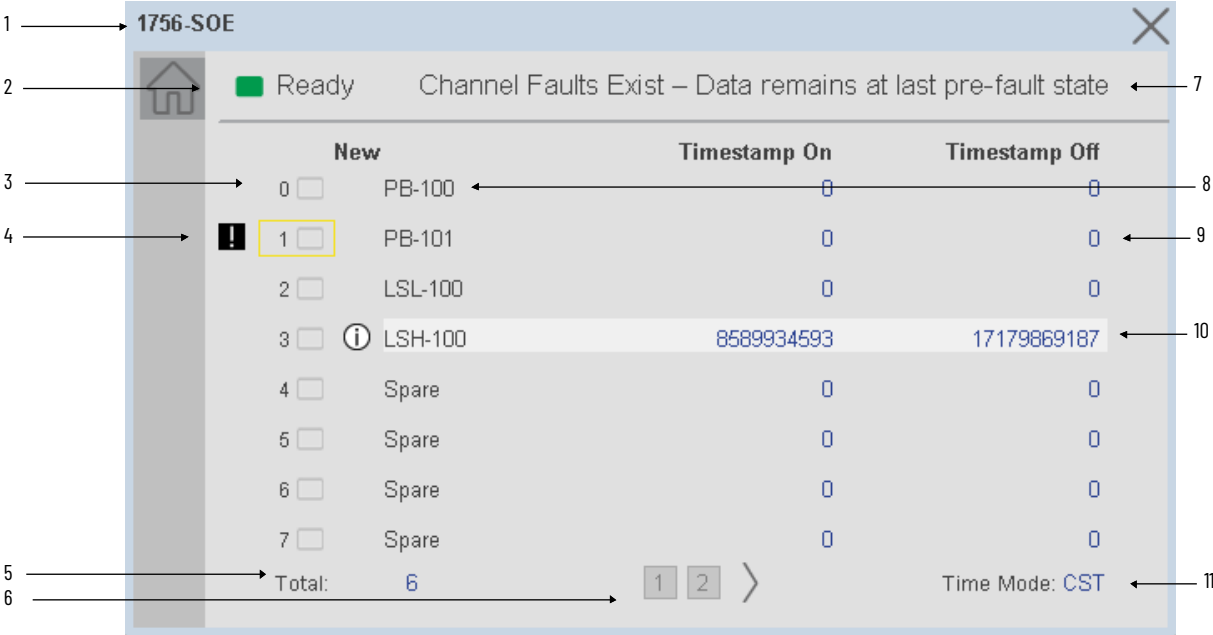

Name	Description	Data Type

## High Speed Counter (HSC) Modules

### Overview

High Speed Counter (HSC) module objects include Studio 5000® Application Code Manager modules and HMI faceplates for FactoryTalk® View ME/SE and Studio 5000 View Designer®. Functionality varies slightly depending on the I/O family (1756/1769/1794/5069/5094). HMI faceplates provide the following information:

- All Modules (1756/1769/1794/5069/5094):
  - Module description, status, and faults
  - HSC channel description, data, count and faults
- 1769/5069/5094 modules additionally provide:
  - channel A/B/Z status
  - pulse width/interval
  - Current rate/acceleration
- 5069 and 5094 modules additionally provide:
  - detailed channel faults
  - Output channel status, description and detailed faults
  - In window status and window detailed faults

I/O modules may be configured with either Data or Data with Events; however, Event data is not displayed on any faceplates at this time.

### Required Files

IO Device Objects include HMI faceplates. There is no controller programming required other than the creation of the I/O module in the project. If using FactoryTalk® View ME/SE you must also import the tag import file *FTViewStudio\_IOLibrary\_Tags\_5\_00.CSV* to support navigation on faceplates with multiple tabs or pages.

Note that the revision numbers (e.g. 5.01) used in filenames below can change as new revisions are created.

### FactoryTalk® View HMI Files

FactoryTalk® View ME/SE applications require importing the desired device faceplates in addition to all Global Object (ggfx) files and all images located in the */HMI FactoryTalk® View Images - png/* folder of the library. FactoryTalk® View ME files are stored in the */HMI - FactoryTalk View ME/* library folder and FactoryTalk® View SE files are stored in the */HMI - FactoryTalk View SE/* library folder.

5094	raC_Dvc_5094IO_wDesc.vpd	5094-HSC	raC_Dvc_5094-HSC_wDesc_FP

**Studio 5000® Application Code Manager Files**

Studio 5000® Application Code Manager (ACM) can be optionally used if it is installed. All devices can be easily registered in the ACM repositories by running the *setup.cmd* file located in the root folder of the library.

Individual HSL4 files are provided as an alternative to running the *setup.cmd* to allow users to manually register specific implementation objects. Each object has two files - an Asset Control file and a Device file. The Module files include attachments of all required files for that object.

All Studio 5000® Application Code Manager files can be found in the */ApplicationCodeManagerLibraries/* folder of the library. The files included are as follows:

Family	Module	Application Code Manager File
1756	1756-HSC	(RA-LIB)_ACM_2.00_Module_Speciality_1756-HSC_B_(5.3).HSL4
1769	1769-HSC	(RA-LIB)_ACM_2.00_Module_Speciality_1769-HSC_A_(5.3).HSL4
1794	1794-VHSC	(RA-LIB)_ACM_2.00_Module_Speciality_1794-VHSC_A_(5.3).HSL4
5069	5069-HSC2X0B4	(RA-LIB)_ACM_2.00_Module_Speciality_5069-HSC2X0B4_A_(5.3).HSL4
5094	5094-HSC	(RA-LIB)_ACM_2.00_Module_Speciality_5094-HSC_A_(5.3).HSL4
	5094-HSCXT	(RA-LIB)_ACM_2.00_Module_Speciality_5094-HSCXT_A_(5.3).HSL4

## Graphic Symbols

Graphic Symbols are used as launch buttons within HMI applications to open up faceplate displays. A generic rectangular pushbutton with a text label can be used, or a graphical style button with abnormal indicator icons can be used. See [Basic Launch Button Attributes](#) section for details on configuration and indicators.

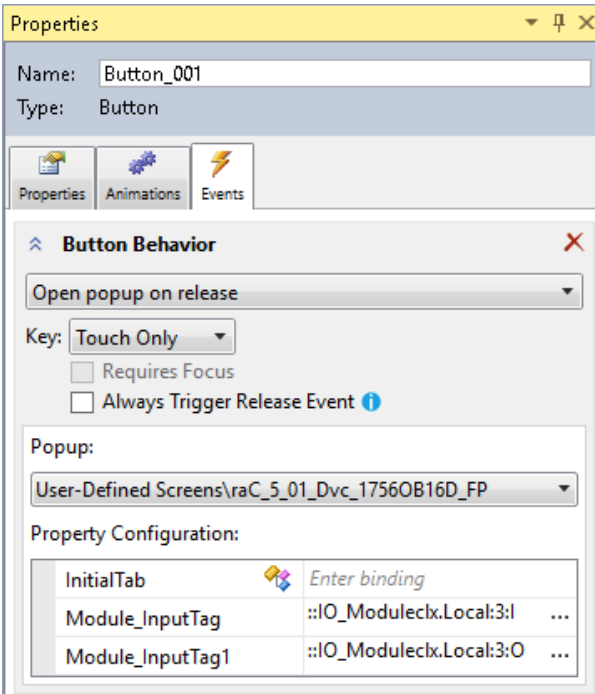

### FactoryTalk® View ME/SE Graphic Symbols

Graphic Symbol Name	Description	Global Object Parameter Values	Graphic Symbol

### Studio 5000 View Designer® Graphic Symbols

All Studio 5000 View Designer® graphic symbols must be configured with an *Event* to open up the appropriate Popup screen. Select the graphic symbol and in the *Properties* window navigate to the *Events* tab. Assign a *Button Behavior* event to *Open popup on release*. Assign the required Popup screen (e.g. User-Defined Screens\raC\_5\_02\_Dvc\_1756OB16D\_wDesc\_FP). The required *Property Configurations* are found in the following table where you may assign an

*InitialTab* to 11 to ensure the pop-up opens on the Home Tab, and assign the *Module\_InputTag* to the module's :I controller tag (e.g. ::PAC.Local:3:I) and *Module\_OutputTag* to the module's :O controller tag (e.g. ::PAC.Local:3:O).

Graphic Symbol Name	Description	Properties - Events Configuration	Graphic Symbol
Button_001	Faceplate navigation button with string tag label. Use Properties > General > Text to modify the button label text.	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag

G0_LaunchSpecialty_5094	Use with 5094 Specialty Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
G0_LaunchSpecialty_1794	Use with 1794 Specialty Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	

Faceplates

There are basic faceplate attributes that are common across all instructions. See [Basic Faceplate Attributes on page 40](#).

In this document, the faceplate pictures (or snapshots) are shown in FactoryTalk® View ME. Faceplates will look similar in FactoryTalk® View SE or Studio 5000 View Designer®. Number of I/O channels and minor details may vary depending on the exact I/O module.

The faceplate title is linked to *Module:I.@description*, the *.@description* extended tag property of the module's input tag instance. This is user-configurable from controller/program tags in Studio 5000 Logix Designer.

Name	Description	Data Type
▶ R1756:2:I	1756-SOE	AB:1756_SOE_16PointCIPSync:I:0
▶ R1756:2:C	1756-SOE	AB:1756_SOE:C:1
▶ R1756:7:I	1756-OF8H	AB:1756_OF8H_AnalogHARTbyChannel...
▶ R1756:11:I	1756-OF8	AB:1756_OF8_Float:I:0
▶ R1756:6:I	1756-OBV8S Sourcing	AB:5000_SDO8:I:0
▶ R1756:10:I	1756-OB32	AB:1756_DO:I:0
▶ R1756:5:I	1756-OB16D	AB:1756_DO_DC_Diag:I:0
▶ R1756:4:I	1756-IF16H	AB:1756_IF16H_AnalogHARTbyChannel...
▶ R1756:9:I	1756-IF8	AB:1756_IF8_Float:I:0
▶ R1756:8:I	1756-IB32	AB:1756_DI:I:0

The channel descriptions are linked to the channel's primary data tag *.@Description* field.

For 50xx Modules:

- Counter channel description is linked to the module's *I.Counterxx* tags.
- Output channel description fields are linked to the *I.Outputxx.@Description* fields.

For 1756 Modules:

- Counter channel description is linked to the module's *I.PresentValue[x]* tags.

For 1794 Modules:

- Counter channel description is linked to the module's *I.ChxCURRENTCount* tags.

Failure to fill in these tags will result in HMI diagnostic errors. These tags can be filled out using Studio 5000 Application Code Manager.

Name	Description	Data Type

## Home

The Home tab is the main tab of the faceplate. I/O channel data and fault information. The banner at the top of the faceplate displays module status and fault information.

5069 and 5094 have 3 pages within the home tab. They display the following data:

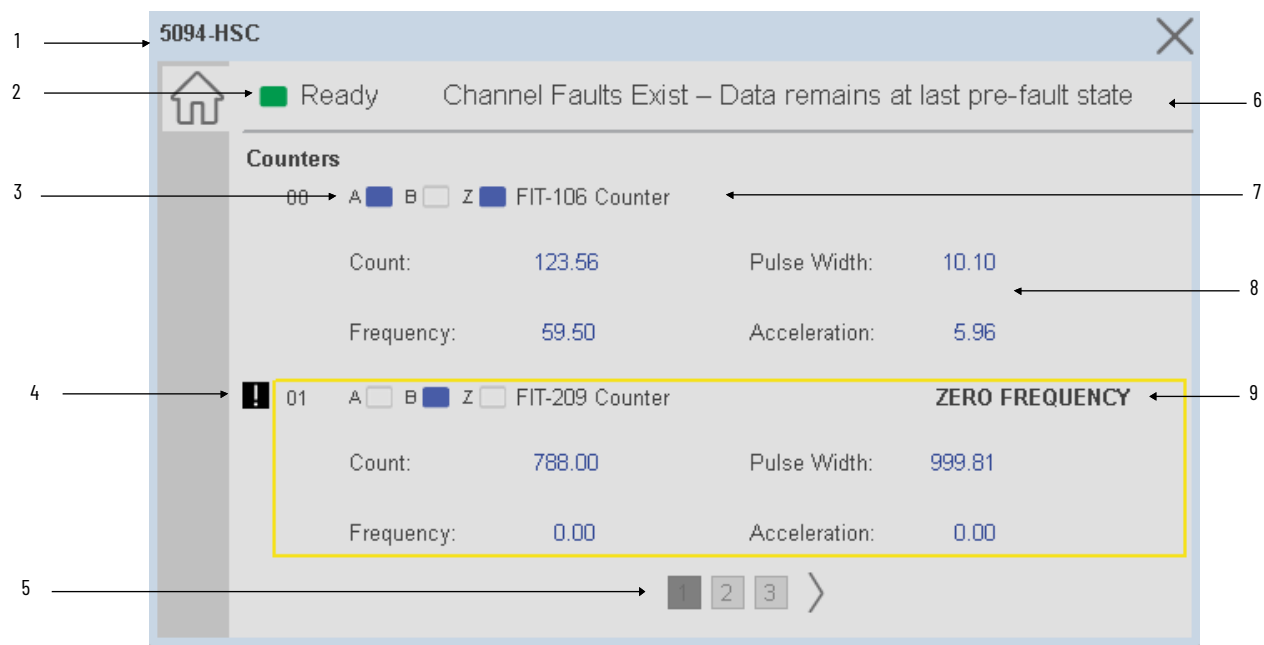

- Page 1: Counter channel data
- Page 2: Output channel data
- Page 3: Window data

## 1756/1794 Home Tab - Counters

Item	Description
1	Faceplate title bar. Display's Module:I.@Description
2	Module ready status.
	GREEN = Ready  Ready
	YELLOW = Module Fault/Not Ready  Not Ready
3	Channel current count
4	Channel Fault Indication. "!" icon and yellow border.
6	Module/Channel Fault status text. May display the following: - Module Fault - All Channel Data remains at last pre-fault state - Channel Fault Exists - Data remains at last pre-fault state
7	Channel description. Module:I.PresentValue[x]@Description (1756) or Module:I.ChxCurrentCount.@Description (1794)

1769/5069/5094 Home Tab - Counters

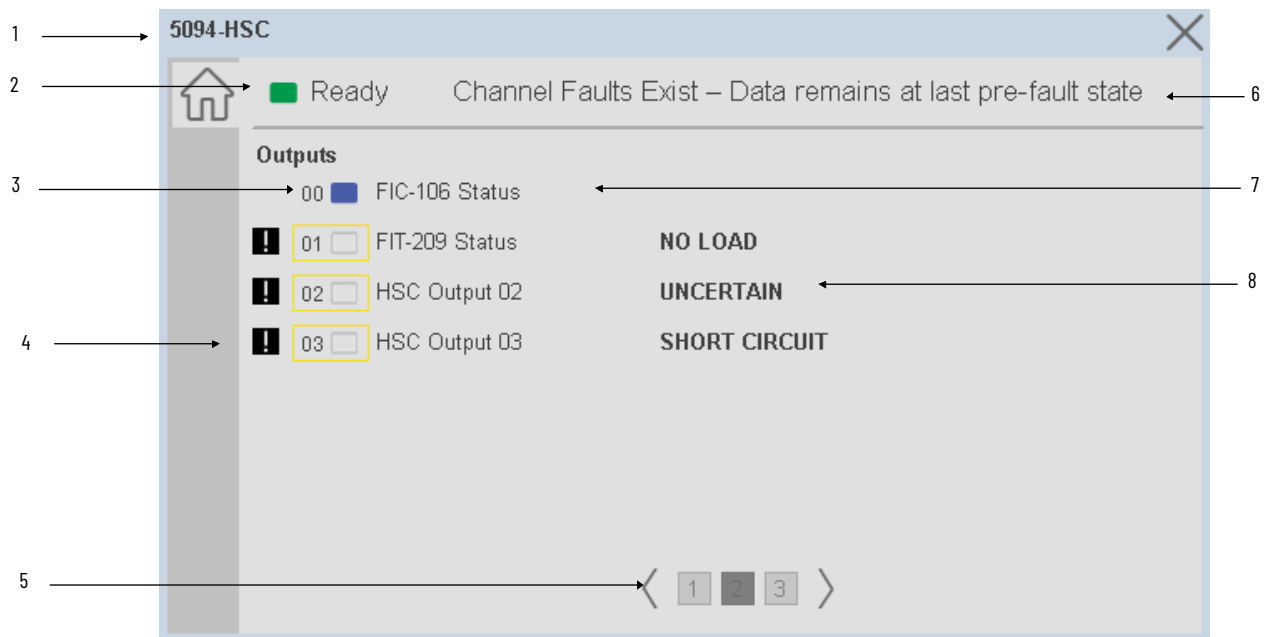

Item	Description	
1	Faceplate title bar. Display's Module:I.@Description	
2	Module ready status.	
	GREEN = Ready	 Ready
	YELLOW = Module Fault/Not Ready	 Not Ready
3	Channel A/B/Z status indicator.	
	BLUE = Active/High	
	GREY = Inactive/Low	
4	Channel Fault Indication. "!" icon and yellow border.	
5	Page navigation	
6	Module/Channel Fault status text. May display the following: - Module Fault - All Channel Data remains at last pre-fault state - Channel Fault Exists - Data remains at last pre-fault state	

Item	Description
7	Channel description. Module:I.Counterxx.@Description
8	Detailed counter channel data - Count - Frequency - Pulse Width - Acceleration
9	Detailed fault data: - Zero Frequency Alarm - Missing Pulse Alarm - Partial Average Frequency - Partial Average Pulse Width - HSC Uncertain - Acceleration Average Alarm - Deceleration Average Alarm - Not a Number - Zero Frequency Alarm - Frequency Average Alarm - Pulse Width Average Alarm - Deceleration Alarm - Acceleration Alarm - Rollover - Frequency Overrange - Pulse Width Alarm - Frequency Alarm

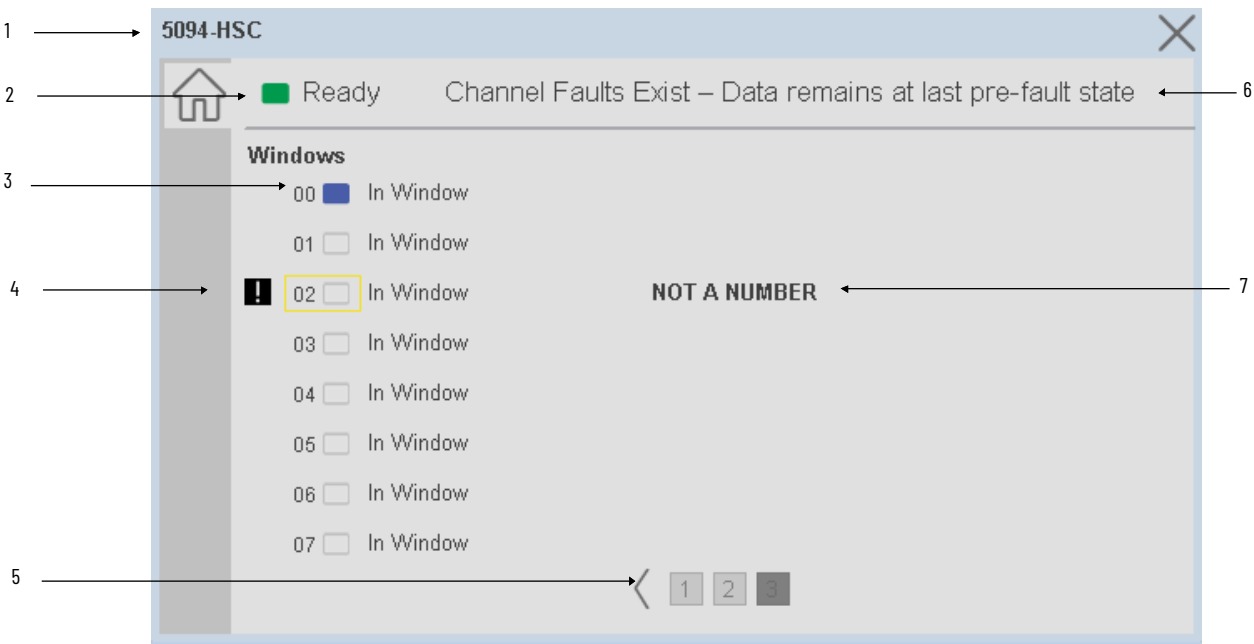

### 5069/5094 Home Tab - Outputs

Item	Description
1	Faceplate title bar. Display's Module:I.@Description
2	Module ready status.
	GREEN = Ready
	YELLOW = Module Fault/Not Ready

Item	Description	
3	Output channel status	
	BLUE = Active/High	
	GREY = Inactive/Low	
4	Channel Fault Indication. "!" icon and yellow border.	
5	Page navigation	
6	Module/Channel Fault status text. May display the following: - Module Fault - All Channel Data remains at last pre-fault state - Channel Fault Exists - Data remains at last pre-fault state	
7	Channel description. Module:I.Outputxx.@Description	
8	Detailed fault data: - Short Circuit - Uncertain - No Load - Channel Fault	

5069/5094 Home Tab - Windows

Item	Description	
1	Faceplate title bar. Display's Module:I.@Description	
2	Module ready status.	
	GREEN = Ready	Ready
	YELLOW = Module Fault/Not Ready	Not Ready

Item	Description	
3	In window status	
	BLUE = Active/High	
	GREY = Inactive/Low	
4	Channel Fault Indication. "!" icon and yellow border.	
5	Page navigation	
6	Module/Channel Fault status text. May display the following: - Module Fault - All Channel Data remains at last pre-fault state - Channel Fault Exists - Data remains at last pre-fault state	
8	Detailed fault data: - Not a Number	

## Application Code Manager

The IO Device Library can be used with Studio 5000® Application Code Manager to configure all required I/O for a project. All I/O modules can be found in the (RA-LIB) ACM 2.00 Library within the *Module* folder.

Refer to the section [Using Application Code Manager](#) for complete details.

## Module Object Parameters

Each module object (e.g. 1756-HSC) has parameters which can be configured in Studio 5000® Application Code Manager prior to Controller code generation.

Parameter Name	Default Value	Description
CounterChxDescription		Channel tag description used in Module:I.Data.x.@Description tag and shown on HMI faceplates.
FPLaunch_Button_Label	[ModuleName]	Module:I.@Description tag and shown on basic text launch buttons.
SEAssocDisplay		Associated HMI SE Display
MEAssocDisplay		Associated HMI ME Display
Slot	Next Available	This is the slot that this module is located in.
RPI	20	This is the RPI of the module (ms).
ChassisName	[ChassisName]	This is the Chassis that this module is located in.
NavigationButton	GraphicalButton	Select Navigation Button type.

Configured HMI Content

HMI Content	Instance Name	Description
Launch Button	GO_LaunchFP	Global Object generic rectangular text launch button
Launch Button	GO_LaunchSpecialty_50xx	Use with 5069 Specialty Modules
Launch Button	GO_LaunchHSC_17xx	Use with 1734/1756/1769 Specialty Modules
Launch Button	GO_LaunchSpecialty_5094	Use with 5094 Specialty Modules
Launch Button	GO_LaunchSpecialty_1794	Use with 1794 Specialty Modules

## Serial Modules

### Overview

Serial module objects include Studio 5000® Application Code Manager modules and HMI faceplates for FactoryTalk® View ME/SE and Studio 5000 View Designer®. Functionality varies slightly depending on the I/O family (1769/5069/5094). HMI faceplates provide the following information:

- All serial modules:
  - Module description, status, and faults
  - Serial channel description and detailed fault status
- 1769-ASCII
  - New data and Tx Data Sent status
  - Tx Ack count
  - Rx ID and Rx Data Length
- 5069/5094-SERIAL - ASCII Channel
  - Diagnostic status and count
  - New data status
  - CTS/RTS/DSR/DCD/DTR/XOFF Status
  - Tx Data sent status, Tx Ack count, Tx ID and Tx Data length
  - Rx ID and Rx Data Length
- 5069/5094-SERIAL - Modbus Master/Slave Channel
  - Diagnostic status and count

5069/5094 SERIAL modules can use the same HMI faceplates. One faceplate is assigned per serial channel and is dependent on one of the three serial types used:

- ASCII
- Modbus Master
- Modbus Slave

### Required Files

IO Device Objects include HMI faceplates. There is no controller programming required other than the creation of the I/O module in the project. If using FactoryTalk® View ME/SE you must also import the tag import file *FTViewStudio\_IOLibrary\_Tags\_5\_00.CSV* to support navigation on faceplates with multiple tabs or pages.

Note that the revision numbers (e.g. 5.01) used in filenames below can change as new revisions are created.

## FactoryTalk® View HMI Files

FactoryTalk® View ME/SE applications require importing the desired device faceplates in addition to all Global Object (ggfx) files and all images located in the */HMI FactoryTalk® View Images - png/* folder of the library. FactoryTalk® View ME files are stored in the */HMI - FactoryTalk View ME/* library folder and FactoryTalk® View SE files are stored in the */HMI - FactoryTalk View SE/* library folder.

### GGFX Global Object Files

Device/Item	Compatible Modules	FactoryTalk® View SE Faceplate	FactoryTalk® View ME Faceplate
Graphic Symbols	All IO Modules	(raC-5-SE) Graphic Symbols - IO Device	(raC-5-ME) Graphic Symbols - IO Device

## Studio 5000 View Designer HMI Files

All Studio 5000 View Designer Files can be found in the */HMI - ViewDesigner - vpd/* folder of the library. Each I/O family (e.g. 1756) has a single .VPD file which contains faceplate screens for all I/O modules in that family.

Family	View Designer File	Module	Variation	View Designer Screen
1769	raC_Dvc_1769IO_wDesc.sc.vpd	1769-ASCII	N/A	raC_Dvc_1769-ASCII_wDesc_FP
5069	raC_Dvc_5069IO_wDesc.sc.vpd	5069-SERIAL	ASCII	raC_Dvc_5069-SERIAL_ASCII_wDesc_FP
			MBMaster	raC_Dvc_5069-SERIAL_MBMaster_wDesc_FP
			MBSlave	raC_Dvc_5069-SERIAL_MBSlave_wDesc_FP
5094	raC_Dvc_5094IO_wDesc.sc.vpd	5094-SERIAL	ASCII	raC_Dvc_5094-SERIAL_ASCII_wDesc_FP
			MBMaster	raC_Dvc_5094-SERIAL_MBMaster_wDesc_FP
			MBSlave	raC_Dvc_5094-SERIAL_MBSlave_wDesc_FP

## Studio 5000® Application Code Manager Files

Studio 5000® Application Code Manager (ACM) can be optionally used if it is installed. All devices can be easily registered in the ACM repositories by running the *setup.cmd* file located in the root folder of the library.

Individual HSL4 files are provided as an alternative to running the *setup.cmd* to allow users to manually register specific implementation objects. Each object has two files - an Asset Control file and a Device file. The Module files include attachments of all required files for that object.

All Studio 5000® Application Code Manager files can be found in the / *ApplicationCodeManagerLibraries/* folder of the library. The files included are as follows:

Family	Module	Application Code Manager File
1769	1769-ASCII	(RA-LIB)_ACM_2.00_Module_Speciality_1769-ASCII_(5.3).HSL4
5069	5069-SERIAL	(RA-LIB)_ACM_2.00_Module_Speciality_5069-SERIAL_(5.3).HSL4
5094	5094-SERIAL	(RA-LIB)_ACM_2.00_Module_Speciality_5094-SERIAL_A_(5.3).HSL4
		(RA-LIB)_ACM_2.00_Module_Speciality_5094-SERIALXT_A_(5.3).HSL4

## Graphic Symbols

Graphic Symbols are used as launch buttons within HMI applications to open up faceplate displays. A generic rectangular pushbutton with a text label can be used, or a graphical style button with abnormal indicator icons can be used. See [Basic Launch Button Attributes](#) section for details on configuration and indicators.

### FactoryTalk® View ME/SE Graphic Symbols

Graphic Symbol Name	Description	Global Object Parameter Values	Graphic Symbol
GO_GotoDisplay1	Faceplate navigation button with string tag label.	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #105: Custom button label. Leave blank to use Tag.@Description #120: Display's left position #121: Display's top position	
GO_LaunchSpeciality_50xx	Use with 5069 Specialty Modules	#102: Faceplate Display Name #103: IO Module Input Tag #104: IO Module Output Tag #120: Display's left position #121: Display's top position

## Studio 5000 View Designer® Graphic Symbols

All Studio 5000 View Designer® graphic symbols must be configured with an *Event* to open up the appropriate Popup screen. Select the graphic symbol and in the *Properties* window navigate to the *Events* tab. Assign a *Button Behavior* event to *Open popup on release*. Assign the required Popup screen (e.g. User-Defined Screens\raC\_5\_02\_Dvc\_1756OB16D\_wDesc\_FP). The required *Property Configurations* are found in the following table where you may assign an *InitialTab* to 11 to ensure the pop-up opens on the Home Tab, and assign the *Module\_InputTag* to the module's :I controller tag (e.g. ::PAC.Local:3:I) and *Module\_OutputTag* to the module's :O controller tag (e.g. ::PAC.Local:3:O).

Graphic Symbol Name	Description	Properties - Events Configuration	Graphic Symbol
Button_001	Faceplate navigation button with string tag label. Use Properties > General > Text to modify the button label text.	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
G0_LaunchSpecialty_50xx	Use with 5069 Specialty Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
G0_LaunchHSC_17xx	Use with 1734/1756/1769 Specialty Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	
G0_LaunchSpecialty_5094	Use with 5094 Specialty Modules	InitialTab: 11 Module_InputTag: IO Module Input Tag Module_OutputTag: IO Module Output Tag	

## Faceplates

There are basic faceplate attributes that are common across all instructions. See [Basic Faceplate Attributes on page 40](#).

In this document, the faceplate pictures (or snapshots) are shown in FactoryTalk® View ME. Faceplates will look similar in FactoryTalk® View SE or Studio 5000 View Designer®. Number of I/O channels and minor details may vary depending on the exact I/O module.

The faceplate title is linked to *Module:I.@description*, the *.@description* extended tag property of the module's input tag instance. This is user-configurable from controller/program tags in Studio 5000 Logix Designer.

Name	Description	Data Type
▶ R1756:2:I	1756-SOE	AB:1756_SOE_16PointCIPSync:I:0
▶ R1756:2:C	1756-SOE	AB:1756_SOE:C:1
▶ R1756:7:I	1756-OF8H	AB:1756_OF8H_AnalogHARTbyChannel...
▶ R1756:11:I	1756-OF8	AB:1756_OF8_Float:I:0
▶ R1756:6:I	1756-OBV8S Sourcing	AB:5000_SDO8:I:0
▶ R1756:10:I	1756-OB32	AB:1756_DO:I:0
▶ R1756:5:I	1756-OB16D	AB:1756_DO_DC_Diag:I:0
▶ R1756:4:I	1756-IF16H	AB:1756_IF16H_AnalogHARTbyChannel...
▶ R1756:9:I	1756-IF8	AB:1756_IF8_Float:I:0
▶ R1756:8:I	1756-IB32	AB:1756_DI:I:0

The channel descriptions are linked to the channel tag's *.@Description* field.

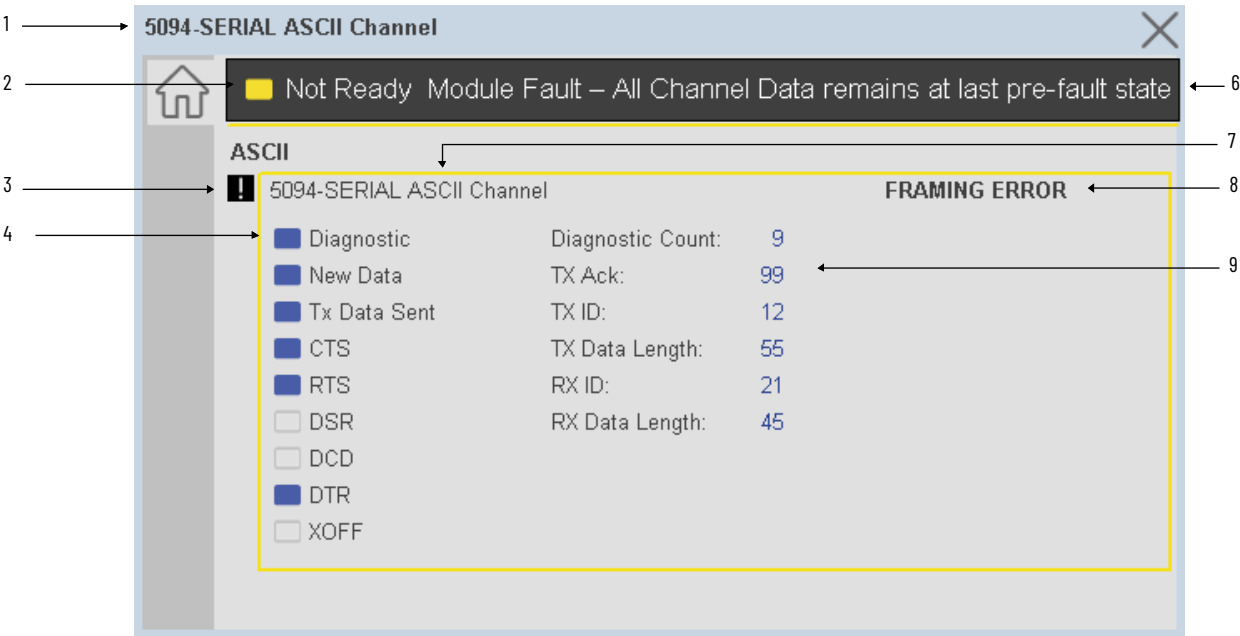

Failure to fill in these tags will result in HMI diagnostic errors. These tags can be filled out using Studio 5000 Application Code Manager.

Name	Description	Data Type
▶ R5094:9:I1	5094-SERIAL Modbus Slave Channel	AB:5000_ModbusSlave:I:1
▶ R5094:9:I00	5094-SERIAL Modbus Master Channel	AB:5000_ModbusMaster_Status_2CC6E45D:I:1
▶ R5094:10:I0	5094-SERIAL ASCII Channel	AB:5000_ASCII:I:1

## Home

The Home tab is the main tab of the faceplate. I/O channel data and fault information. The banner at the top of the faceplate displays module status and fault information. Home tabs vary based on the type of module and serial channel type.

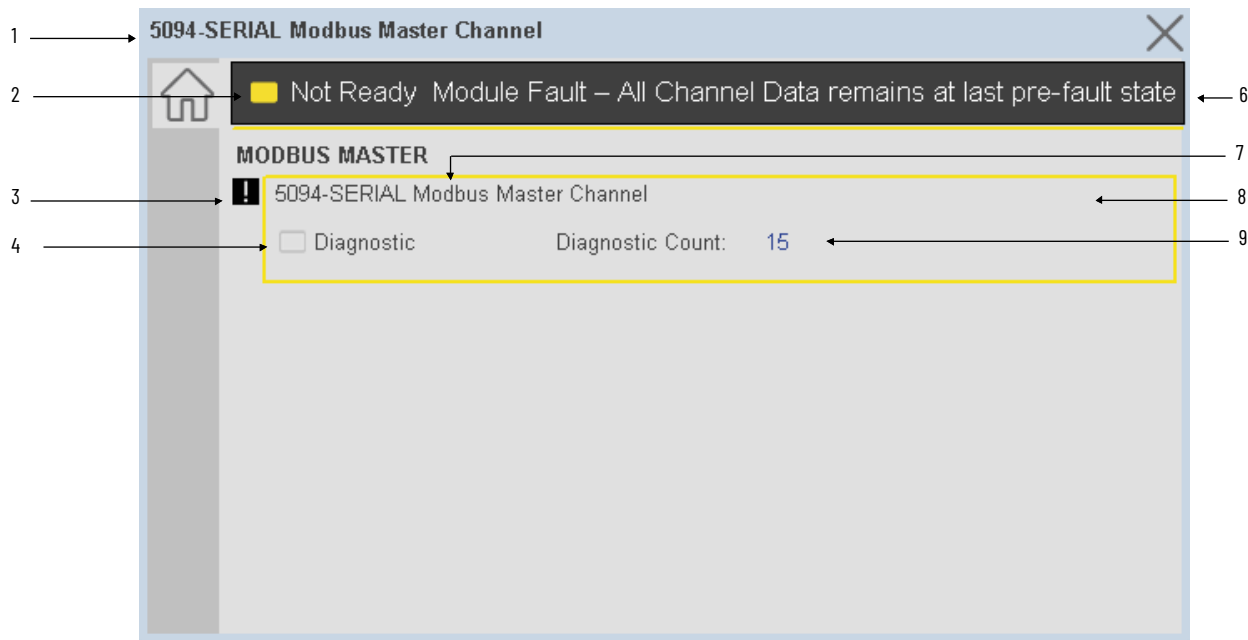

50xx ASCII Channel

Item	Description	
1	Faceplate title bar. Display's Module:I.@Description	
2	Module ready status.	
	GREEN = Ready	 Ready
	YELLOW = Module Fault/Not Ready	 Not Ready
3	Channel Fault Indication. "!" icon and yellow border.	
4	Channel Status:	
	- Diagnostic Active	
	- New Data	
	- Tx Data Sent	
	- CTS	
	- RTS	
	- DSR	
	- CDC	
	- DTR	
	- XOFF	
	BLUE = Active/High	
	GREY = Inactive/Low	
6	Module/Channel Fault status text. May display the following:	
	- Module Fault - All Channel Data remains at last pre-fault state	
	- Channel Fault Exists - Data remains at last pre-fault state	

Item	Description
7	Channel description. Channel:I.@Description
8	Channel Fault Details: - Non Delimited Record - Rx Data Length Invalid - Tx Data Length Invalid - Handshake Error - Break Interrupt - Buffer Overrun - Rx FIFO Empty - Tx FIFO Empty - Framing Error - Tx Data Lost - Rx Data Lost - Uncertain - Parity Error
9	Channel Data: - Diagnostic Count - Tx Ack Count - Tx ID - Tx Data Length - Rx ID - Rx Data Length

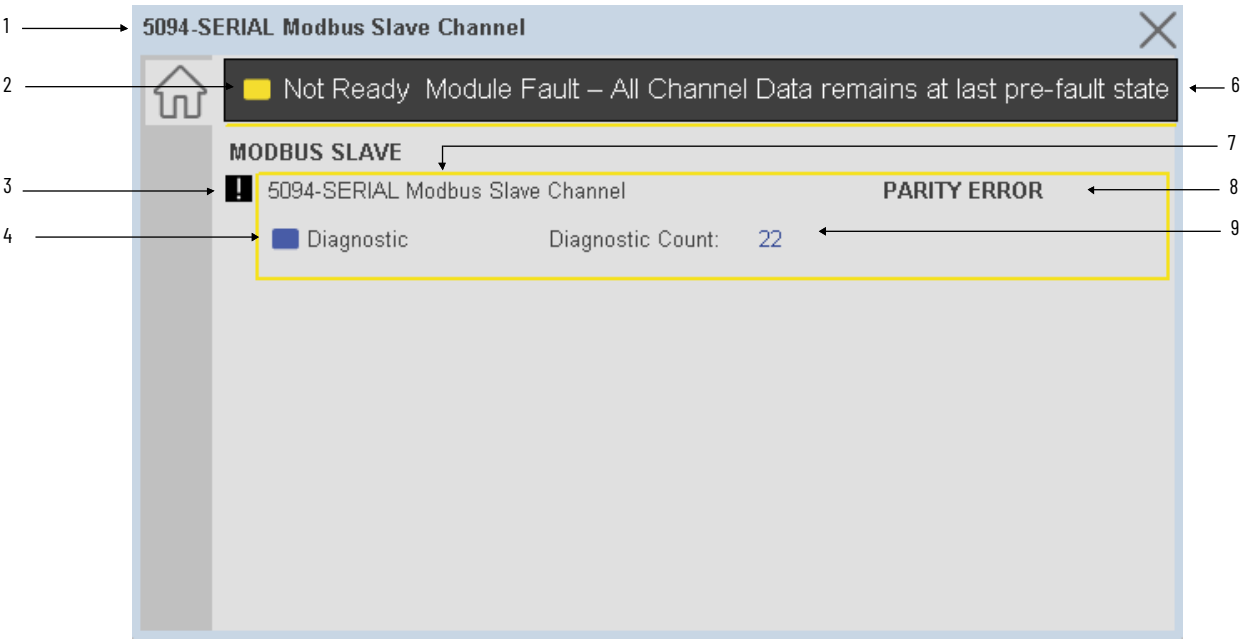

### 50xx Modbus Master Channel

Item	Description
1	Faceplate title bar. Display's Module:I.@Description
2	Module ready status.  GREEN = Ready  YELLOW = Module Fault/Not Ready
3	Channel Fault Indication. "!" icon and yellow border.

Item	Description	
4	Channel Status: - Diagnostic Active	
	BLUE = Active/High	
	GREY = Inactive/Low	
6	Module/Channel Fault status text. May display the following: - Module Fault - All Channel Data remains at last pre-fault state - Channel Fault Exists - Data remains at last pre-fault state	
7	Channel description. Channel:I.@Description	
8	Channel Fault Details: - Uncertain	
9	Channel Data: - Diagnostic Count	

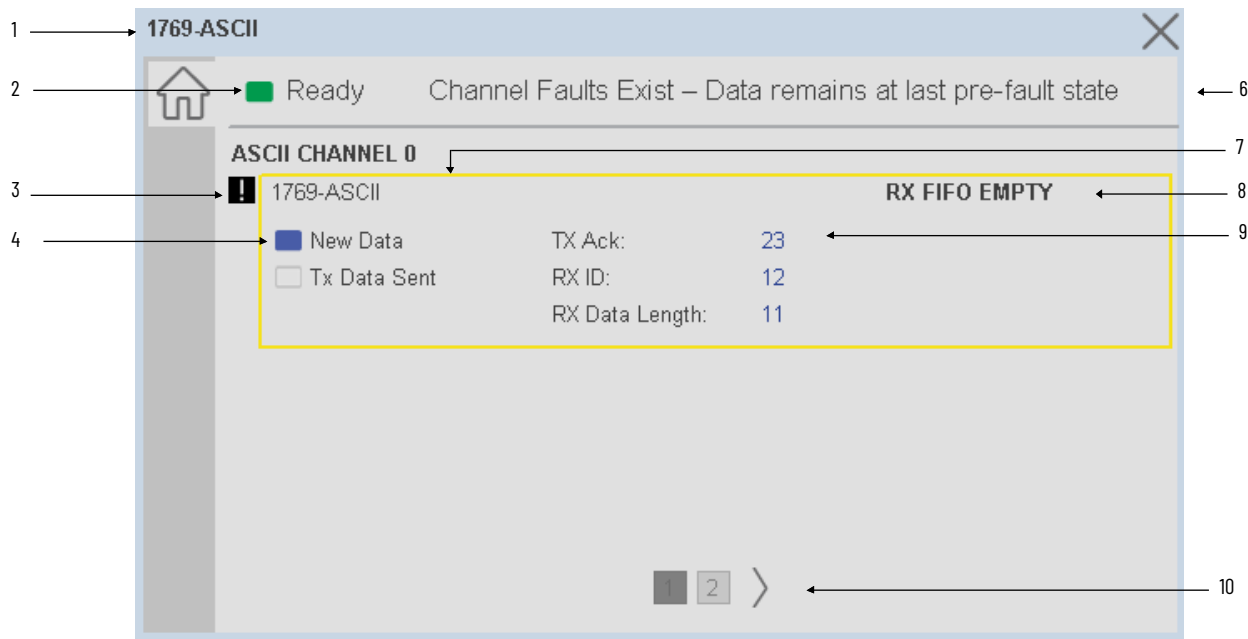

50xx Modbus SlaveChannel

Item	Description	
1	Faceplate title bar. Display's Module:I.@Description	
2	Module ready status.	
	GREEN = Ready	 Ready
	YELLOW = Module Fault/Not Ready	 Not Ready
3	Channel Fault Indication. "!" icon and yellow border.	

Item	Description	
4	Channel Status: - Diagnostic Active	
	BLUE = Active/High	
	GREY = Inactive/Low	
6	Module/Channel Fault status text. May display the following: - Module Fault - All Channel Data remains at last pre-fault state - Channel Fault Exists - Data remains at last pre-fault state	
7	Channel description. Channel:I.@Description	
8	Channel Fault Details: - Uncertain - Illegal Data Address - CRC LRC Error - Buffer Overrun - Framing Error - Parity Error	
9	Channel Data: - Diagnostic Count	

### 1769-ASCII Channel

Item	Description	
1	Faceplate title bar. Display's Module:I.@Description	
2	Module ready status.	
	GREEN = Ready	
	YELLOW = Module Fault/Not Ready	
3	Channel Fault Indication. "!" icon and yellow border.	

Item	Description	
4	Channel Status: - New Data - Tx Data Sent	
	BLUE = Active/High	
	GREY = Inactive/Low	
6	Module/Channel Fault status text. May display the following: - Module Fault - All Channel Data remains at last pre-fault state - Channel Fault Exists - Data remains at last pre-fault state	
7	Channel description. Channel:I.@Description	
8	Channel Fault Details: - Non Delimited Record - Tx Data Overflow - Handshake Error - Tx FIFO Empty - Rx FIFO Empty - Rx Data Lots - Tx Data Lost - Parity Error	
9	Channel Data: - TX Ack - RX ID - Rx Data Length	
10	Page navigation. One page per ASCII channel.	

Application Code Manager

The IO Device Library can be used with Studio 5000® Application Code Manager to configure all required I/O for a project. All I/O modules can be found in the (RA-LIB) ACM 2.00 Library within the *Module* folder.

Refer to the section [Using Application Code Manager](#) for complete details.

Module Object Parameters

Each module object (e.g. 5094-SERIAL) has parameters which can be configured in Studio 5000® Application Code Manager prior to Controller code generation.

Parameter Name	Default Value	Description
FPLaunch_Button_Label	[ModuleName]	Module:I.@Description tag and shown on basic text launch buttons.
SEAssocDisplay		Associated HMI SE Display
MEAssocDisplay		Associated HMI ME Display
Slot	Next Available	This is the slot that this module is located in.

Parameter Name	Default Value	Description
RPI	20	This is the RPI of the module (ms).
ChassisName	[ChassisName]	This is the Chassis that this module is located in.
Channel0	Disabled	Serial channel type (5069/5094 only) - Disabled - Generic ASCII - Modbus Master - Modbus Slave
Channel1	Disabled	Serial channel type (5069/5094 only) - Disabled - Generic ASCII - Modbus Master - Modbus Slave
NavigationButton	GraphicalButton	Select navigation button type.

## Configured HMI Content

HMI Content	Instance Name	Description

## Redundant Adapter 1756-EN4TR

### Overview

1756-EN4TR redundant adapter module objects include Studio 5000® Application Code Manager modules, HMI faceplates for FactoryTalk® View ME/SE and Studio 5000 View Designer®, and an Add-On Instruction (AOI).

The redundant adapter feature is available for 1756-EN4TR modules when used as remote adapters and the modules must be installed in slots 0 and 1 of the remote chassis. The benefit of this feature is increased reliability of the remotely located ControlLogix I/O modules. For more information on redundant adapters, refer to the [ControlLogix EtherNet/IP Network Devices User Manual](#).

- HMI faceplates provide the following information:
  - Status of redundant adapter pair
  - Primary module IP address
  - Primary module slot number
  - Primary module status
  - Partner module status
  - Information on when a qualification of the partner module is occurring
  - Port status indicator for each Ethernet port within the redundant adapter pair

### Required Files

IO Device Objects include HMI faceplates. For the 1756-EN4TR redundant adapter, controller programming includes the creation of the I/O modules in the project and use of an AOI to manage the redundant adapter information. If using FactoryTalk® View ME/SE you must also import the tag import file `FTViewStudio_IOLibrary_Tags_5_00.CSV` to support navigation on faceplates with multiple tabs or pages

Note that the revision numbers (e.g. 5.03) used in filenames below can change as new revisions are created.

### Controller Files

Add-On Instructions are reusable code objects that contain encapsulated logic that can streamline implementing your system. This lets you create your own instruction set for programming logic as a supplement to the instruction set provided natively in the ControlLogix® firmware. An Add-On Instruction is defined once in each controller project, and can be instantiated multiple times

in your application code as needed.

The Add-On Instruction must be imported into the controller project to be used in the controller configuration. These can be imported as Add-On Instruction files, or as part of the Rung Import or Import Library Objects wizard.

All Add-On Instruction and Rung Import files can be found in the */Studio 5000 Logix Designer Files - L5X/* folder in the library.

Device/Item	Compatible Modules	Add-On Instruction	Rung Import
EN4TR	1756-EN4TR	raC_Dvc_1756_EN4TR_5.03_AOI.L5X	raC_Dvc_1756_EN4TR_5.03_Rung.L5X

## FactoryTalk® View HMI Files

FactoryTalk® View ME/SE applications require importing the desired device faceplates in addition to all Global Object (ggfx) files and all images located in the */HMI FactoryTalk® View Images - png/* folder of the library. FactoryTalk® View ME files are stored in the */HMI - FactoryTalk View ME/* library folder and FactoryTalk® View SE files are stored in the */HMI - FactoryTalk View SE/* library folder.

### GGFX Global Object Files

Device/Item	Compatible Modules	FactoryTalk® View SE Faceplate	FactoryTalk® View ME Faceplate
Graphic Symbols	All IO Modules	(raC-5-SE) Graphic Symbols - IO Device	(raC-5-ME) Graphic Symbols - IO Device
Toolbox	All IO Modules	(raC-5-SE) Toolbox -IO Device.ggfx	(raC-5-ME) Toolbox -IO Device.ggfx

### GFX Display Files

Family	Module	Variation	FactoryTalk View SE Faceplate	FactoryTalk View ME Faceplate
1756	1756-EN4TR	N/A	(raC-5_03-SE) raC_Dvc_1756_EN4TR-Faceplate.gfx	(raC-5_03-ME) raC_Dvc_1756_EN4TR-Faceplate.gfx

## Studio 5000 View Designer HMI Files

All Studio 5000 View Designer Files can be found in the */HMI - ViewDesigner - vpd/* folder of the library. Each I/O family (e.g. 1756) has a single .VPD file which contains faceplate screens for all I/O modules in that family.

Family	View Designer File	Module	Variation	View Designer Screen
1756	raC_Dvc_1756_EN4TR.vpd	1756-EN4TR	N/A	raC_Dvc_1756_EN4TR_FP

## Studio 5000® Application Code Manager Files

Studio 5000® Application Code Manager (ACM) can be optionally used if it is installed. All devices can be easily registered in the ACM repositories by running the *setup.cmd* file located in the root folder of the library.

Individual HSL4 files are provided as an alternative to running the *setup.cmd* to allow users to manually register specific implementation objects. Each object has two files - an Asset Control file and a Device file. The Module files include attachments of all required files for that object.

All Studio 5000® Application Code Manager files can be found in the / *ApplicationCodeManagerLibraries/* folder of the library. The files included are as follows:

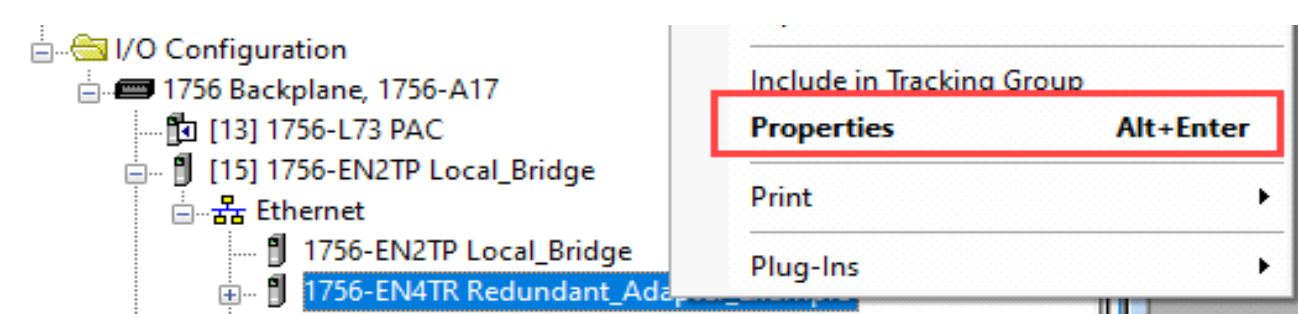

Implementation Object	Compatible Modules	Asset Control File (.HSL4)	Device File (.HSL4)
1756-EN4TR	1756-EN4TR	(RA-LIB)_Device_Asset-Control_IO-Device_raC_Dvc_1756_EN4TR_(5.4).HSL4	(RA-LIB)_Device_Device_IO-Device_raC_LD_Dvc_1756_EN4TR_(5.4).HSL4

## Device Definition

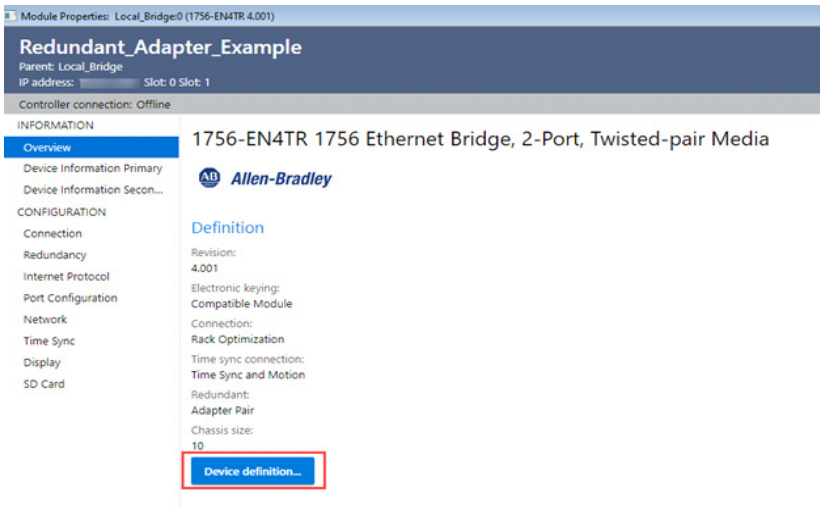

The 1756-EN4TR must be configured with the correct device definition. Proper module configuration is required to use the redundant adapter feature and leverage the associated Add-On instruction and faceplate.

To verify the device definition:

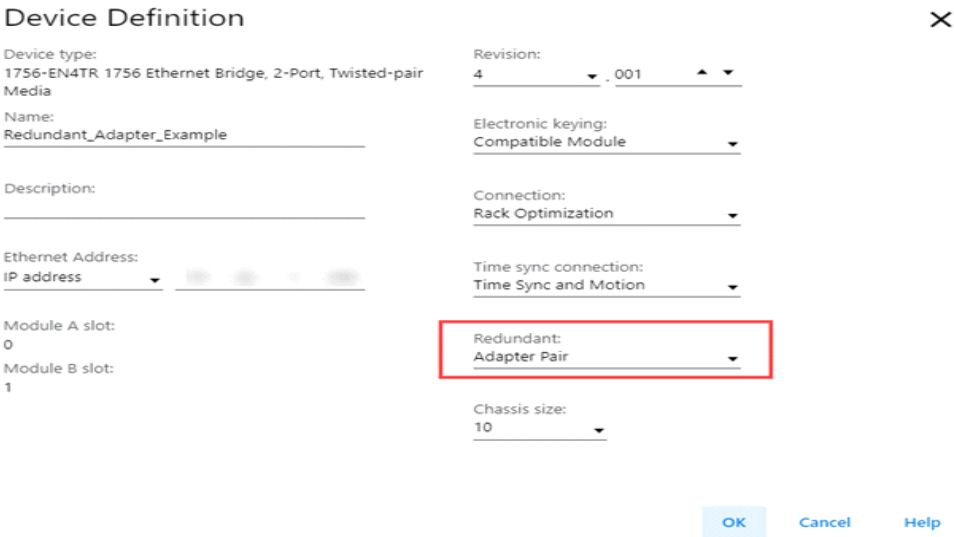

Find the device in the Controller Organizer pane in Studio 5000 Logix Designer® and open the Module Properties by double-clicking or right-click and select Properties.

On the Overview tab click on the Device Definition button.

Ensure Redundant field is set to Adapter Pair.

## Library Versions

Each library object has a revision x.yy where: x is the Major Revision number and yy is the Minor Revision number. Each release of the library comes with release notes that describe the changes that were made since the last release. You can find the revision number of the object in a number of locations as shown below.

Component	Example																										
The Add-On Instruction in Logix Designer application has revision information visible when the instruction is selected in the Controller Organizer.	<table border="1"> <tr><td>Description</td><td>Monitor 1756-EN4TR in Redundant</td></tr> <tr><td>Revision</td><td>v5.3 .00</td></tr> <tr><td>Revision Note</td><td></td></tr> <tr><td>Vendor</td><td>Rockwell Automation</td></tr> <tr><td>Data Type Size</td><td>1240 bytes</td></tr> <tr><td>Created</td><td>4/24/2017 7:11:25 PM</td></tr> <tr><td>Created By</td><td>Not Available</td></tr> <tr><td>Edited</td><td>7/25/2023 5:59:39 PM</td></tr> <tr><td>Edited By</td><td>Not Available</td></tr> <tr><td>Signature ID</td><td>&lt;none&gt;</td></tr> <tr><td>Protection Type</td><td>Source Key</td></tr> <tr><td>Protection Name</td><td>Unknown Protection</td></tr> <tr><td>Protection Permissions</td><td>+ View, Use</td></tr> </table>	Description	Monitor 1756-EN4TR in Redundant	Revision	v5.3 .00	Revision Note		Vendor	Rockwell Automation	Data Type Size	1240 bytes	Created	4/24/2017 7:11:25 PM	Created By	Not Available	Edited	7/25/2023 5:59:39 PM	Edited By	Not Available	Signature ID	<none>	Protection Type	Source Key	Protection Name	Unknown Protection	Protection Permissions	+ View, Use
Description	Monitor 1756-EN4TR in Redundant																										
Revision	v5.3 .00																										
Revision Note																											
Vendor	Rockwell Automation																										
Data Type Size	1240 bytes																										
Created	4/24/2017 7:11:25 PM																										
Created By	Not Available																										
Edited	7/25/2023 5:59:39 PM																										
Edited By	Not Available

Protection Type	Source Key																										
Protection Name	Unknown Protection																										
Protection Permissions	+ View, Use																										
The Add-On Instruction Definition General tab shows the revision number along with basic revision notes. Refer to the release notes for complete revision notes.																											
The faceplate in FactoryTalk View software has revision information visible when the pointer is clicked just inside the lower left corner of the faceplate.																											
The revision number is shown in the file names for GFX, VPD, ACM.HSL4, AOI.L5X, and RUNG.L5X files.	<ul style="list-style-type: none"> <li>(raC-5_03-ME) raC_Dvc_1756_EN4TR-Faceplate.gfx</li> <li>(RA-LIB)_ACM_2.00_Module_Communication_1756-EN4TR_(5.3).HSL4</li> <li>(RA-LIB)_Device_Asset-Control_IO-Device_raC_Dvc_1756_EN4TR_(5.3).HSL4</li> <li>(RA-LIB)_Device_Device_IO-Device_raC_LD_Dvc_1756_EN4TR_(5.3).HSL4</li> <li>raC_Dvc_1756_EN4TR_AOI.L5X</li> <li>raC_Dvc_1756_EN4TR_RUNG.L5X</li> </ul>																										

## Add-On Instruction I/O Data InOut Data

InOut	Function / Description	DataType
Inf_Lookup	Code / Description List Entry	raC_UDT_LookupMember_STR0082[2]
Ref_Ctrl_Cmd	Automation Device Command Interface - IODevice	raC_UDT_ItfAD_IODevice_Cmd
Ref_Ctrl_Inf	Automation Device Information Interface - IODevice	raC_UDT_ItfAD_IODevice_Inf
Ref_Ctrl_Set	Automation Device Setting Interface - IODevice	raC_UDT_ItfAD_IODevice_Set
Ref_Ctrl_Sts	Automation Device Status Interface - IODevice	raC_UDT_ItfAD_IODevice_Sts
Ref_Module	Address in I/O tree of redundant adapter pair	Module
Ref_MsgData	General messaging data	SINT[100]
Ref_MsgCustGetAll	General messaging data	MESSAGE
Ref_MsgGetAttrSgl	General messaging data	MESSAGE

Note that the 1756\_EN4TR\_RedAdapter device object has several InOut Parameters for MSG instructions which are required to communicate with the redundant adapter pair. These controller scoped tags are automatically imported when using Application Code Manager or importing the RUNG.L5X file. Ensure the Destination Elements for each MSG are set to unique tags when using multiple instances of the object.

## Input Data

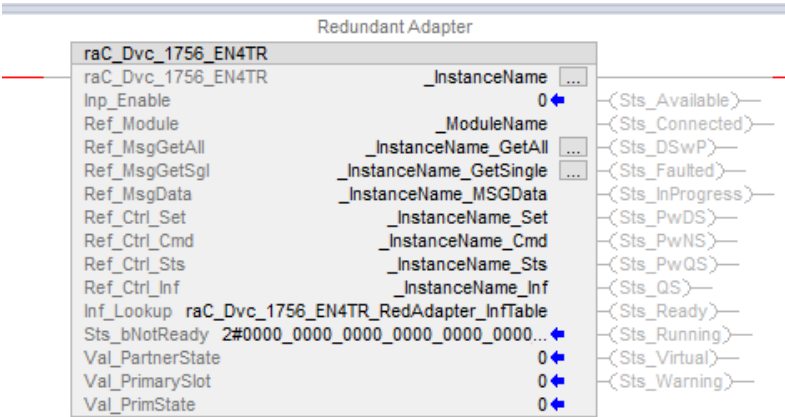

Input	Function / Description	DataType
Inp_Enable	Trigger for AOI	BOOL
EnableIn	Enable Input - System Defined Parameter	BOOL

## Output Data

Output	Function / Description	DataType
Val_LinkStsWordPrim1	Status of port 1 on the primary adapter module	DINT
Val_LinkStsWordPrim2	Status of port 2 on the primary adapter module	DINT
Val_LinkStsWordSec1	Status of port 1 on the secondary adapter module	DINT
Val_LinkStsWordSec2	Status of port 2 on the secondary adapter module	DINT
Val_ModuleStatus	Module status	DINT
raC_Dvc_1756_EN4TR_Red Adapter	Unique Parameter Name for auto - discovery	BOOL
Sts_Available	Device is available for interaction with user code	BOOL
Sts_bNotReady	Bitwise device 'not ready' reason	DINT
Sts_Connected	Device is connected to the Programmable Automation Controller	BOOL
Sts_DSWP	Disqualified secondary with primary	BOOL
Sts_Faulted	Device faulted status: 1 = an active fault exists	BOOL
Sts_InProgress	Qualification attempt in progress	BOOL
Sts_InhibitCmd	Disable Command inputs from external sources	BOOL
Sts_InhibitSet	Disable Setting inputs from external sources	BOOL
Sts_PartnerState	State of partner module in redundant adapter pair	INT
Sts_PrimarySlot	Current primary slot of redundant adapter (0 or 1)	DINT
Sts_PrimState	State of primary module in redundant adapter pair	INT
Sts_PwDS	Primary with disqualified secondary	BOOL
Sts_PwNS	Primary with no secondary	BOOL
Sts_PwQS	Primary with qualified secondary	BOOL
Sts_QS	Qualified secondary	BOOL
Sts_Ready	Device is ready to perform primary function	BOOL
Sts_Running	At least one remote adapter of the redundant pair is running	BOOL
Sts_Virtual	Virtual device status: 1 = Device is operating as a 'virtual' device	BOOL
Sts_Warning	Device warning status: 1 = an active alarm or warning exists	BOOL
Sts_InvalidPath	It shows an invalidpath error when entering the long path	BOOL
EnableOut	Enable Output - System Defined Parameter	BOOL

Programming Example

Fully configured device on a rung is provided below for reference. Note that this programming example is the same code that is imported when either importing the supplied RUNG.L5X files or when using Application Code Manager or the Studio 5000® Import Library Objects wizard plug-in.

The device (1756-EN4TR redundant adapter pair) must also be configured with the correct device definition. Note that this configuration is completed automatically when using Application Code Manager or the Studio 5000® Import Library Objects wizard plug-in. For details on setting up the device, refer to the Device Definition section.

Graphic Symbols

Graphic Symbols are used as launch buttons within HMI applications to open up faceplate displays. A generic rectangular pushbutton with a text label can be used, or a graphical style button with abnormal indicator icons can be used. See [Basic Launch Button Attributes](#) section for details on configuration and indicators.

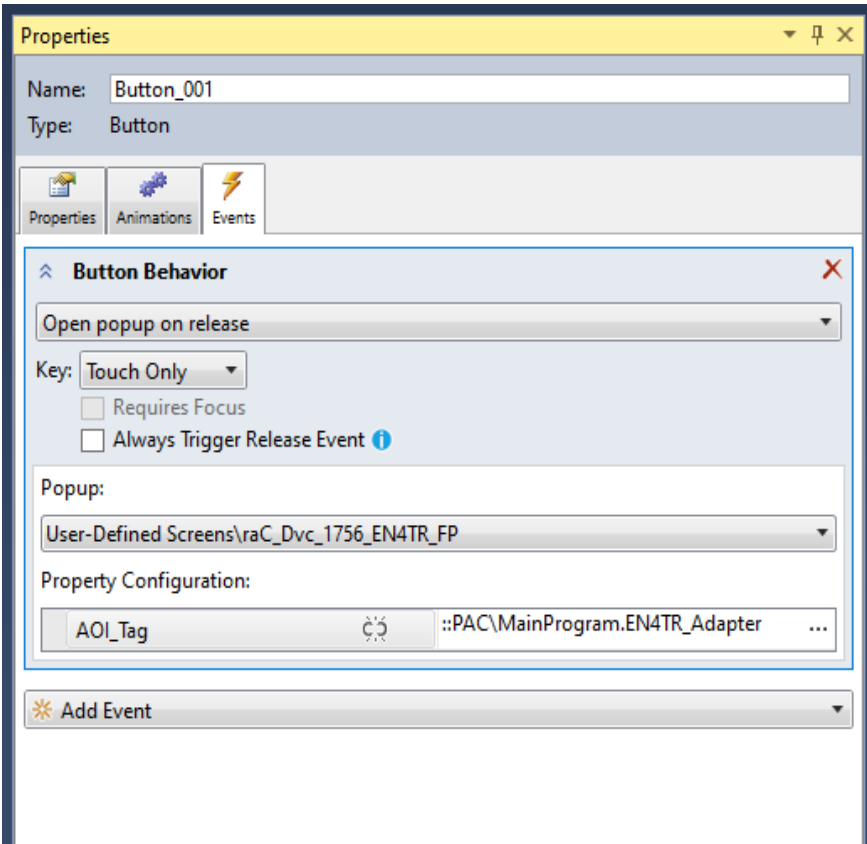

FactoryTalk® View ME/SE Graphic Symbols

Graphic Symbol Name	Description	Global Object Parameter Values	Graphic Symbol
G0_GotoDisplay4	Faceplate navigation button with string tag label.	#102: Add-On Instruction Backing Tag e.g. ([:[Topic Name]Redundant_Adapter_AOI.Example]) #105: Custom button label. Leave blank to use Tag.@Description #120: Display's left position #121: Display's top position	
G0_LaunchEN4TR_RedundantAdapter_1756	Use with 1756-EN4TR Modules	#102: Add-On Instruction Backing Tag e.g. ([:[Topic Name]Redundant_Adapter_AOI.Example]) #120: Display's left position #121: Display's top position	

## Studio 5000 View Designer® Graphic Symbols

All Studio 5000 View Designer® graphic symbols must be configured with an *Event* to open up the appropriate Popup screen. Select the graphic symbol and in the *Properties* window navigate to the *Events* tab. Assign a *Button Behavior* event to *Open popup on release*. Assign the required Popup screen (e.g. User-Defined Screens\raC\_Dvc\_1756\_EN4TR\_FP).

Graphic Symbol Name	Description	Properties - Events Configuration	Graphic Symbol
Button_001	The supplied launch button in View Designer is used to navigate to the faceplate in a user application.	AOI_Tag: Object's Add-On Instruction Tag	
GO_LaunchComm_1756_EN4TR	Use with 1756-EN4TR Modules	AOI_Tag: Object's Add-On Instruction Tag	

## Faceplates

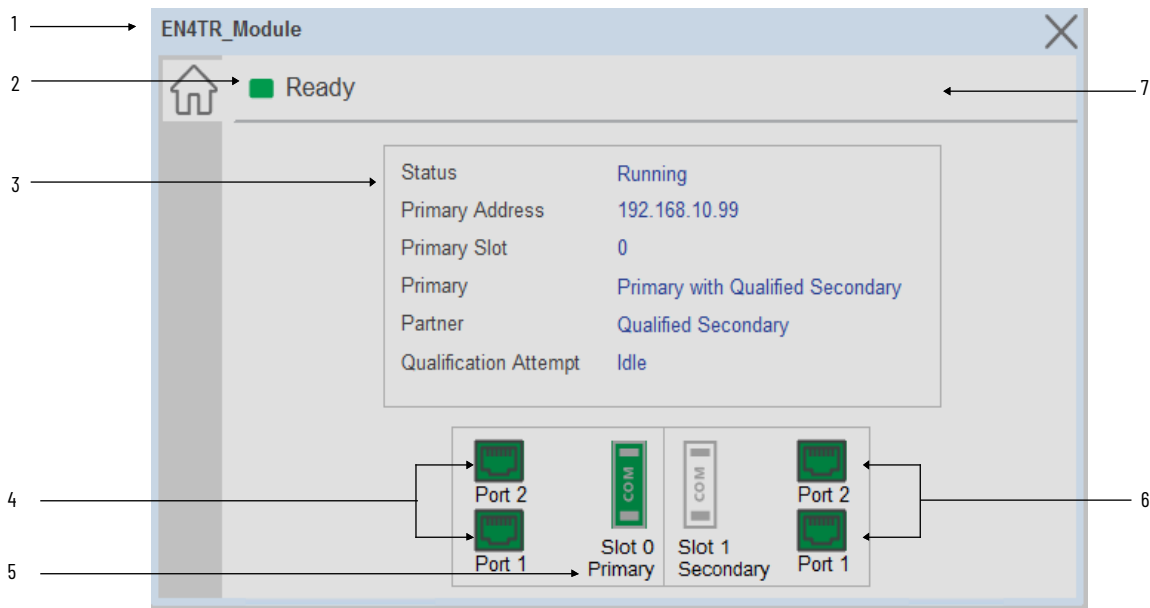

There are basic faceplate attributes that are common across all instructions. See [Basic Faceplate Attributes on page 40](#).

The faceplate title is linked to `_InstanceName.@description`, the `.@description` extended tag property of the Add-On Instruction instance. This is user-configurable from controller/program tags in Studio 5000 Logix Designer.

Name	Description
▶ Module_EN4TR	EN4TR_Module
▶ Module_EN4TR_Inf	Automation Device Information Interface - IODevice
▶ Module_EN4TR_Cmd	Command Interface
▶ Module_EN4TR_Set	Setting Interface
▶ Module_EN4TR_Sts	Status Interface

Home

The Home tab is the main tab of the faceplate. I/O channel data and fault information. The banner at the top of the faceplate displays module status and fault information. Home tabs vary based on the type of module and serial channel type.

Item	Description
1	Faceplate title bar. Display's Module:I.@Description
2	Module ready status.
	GREEN = Ready
	YELLOW = Module Fault/Not Ready

Item	Description	
3	Redundant adapter pair status information overview	
4	Slot 0 Port status	
	Green = Active	
	Gray = Inactive	
5	Current location of Primary and Secondary slots	
6	Slot 1 Port status	
7	Green = Active	
8	Gray = Inactive	
9	Module/Channel Fault status text. May display the following: - Module Fault - Neither Adapter is Running - AOI Not Enabled - All Data remains at last enabled state	

## Application Code Manager

IO-Link Device Library objects can be set-up and configured using Studio 5000 Application Code Manager.

Refer to the section [Using Application Code Manager](#) for complete details.

### Definition Objects: raC\_Dvc\_1756\_EN4TR

This Asset-Control object contains the Add-On Instruction definition and required data types. It is used as a linked library to the device implement object. This gives users the flexibility to choose to instantiate only definition and create custom implement code. A user may also create their own implement library and link with this definition library object.

### Implementation Objects: raC\_LD\_Dvc\_1756\_EN4TR

The Device Implementation Object is the rung that is instantiated when generating controller code using Application Code Manager. This implementation object includes a reference to the Asset-Control Add-On Instruction definition, along with any required controller tags, programs, modules, and HMI objects.

Parameter Name	Default Value	Instance Name	Definition	Description
RoutineName	{ObjectName}	{RoutineName}	Routine	Enter Routine name. Routine will be created and Object implement rung(s) inserted. A JSR will be inserted in MainRoutine. If routine name already exists, then object will be inserted into existing routine. By default, parameter is set to Object Name.
TagName	{ObjectName}	{TagName}	Backing Tag	Enter the backing tag of the main AOI. This will serve as the base tag name for other tags in this object that are derived from the base.
TagDescription	{ObjectDescription}	{TagDescription}		Tag Description of the main AOI backing tag
ModuleReference	ModuleReference			Select the EN4TR module.
NavigationButton	GraphicalButton			Select Navigation Button type.

Configured HMI Content

HMI Content	Instance Name	Description
Launch Button	{ObjectName}_GO_LaunchFP	Global Object configured callout instance
