## Overview

FLEXLINE™ 3500 motor control centers (MCCs) offer a full range of IEC components such as AC Drives, direct-on-line starters (DOL), direct-on-line reversing starters (DOLR), circuit breakers, overloads, contactors, and other devices.

Figure 1 - FLEXLINE 3500 MCC

The FLEXLINE 3500 MCC provides withdrawable or fixed units with IP degree up to IP54 and internal separation up to 4B. The FLEXLINE 3500 MCC provides intelligent control with common communication protocols that are easily networked in the MCC.

In addition to a complete line of motor control equipment, the FLEXLINE 3500 MCC also packages power distribution equipment. Your FLEXLINE 3500 MCC can include air circuit breakers, feeders, mains, main-tie-mains, and transformers for an integrated, low voltage power package.

FLEXLINE 3500 MCCs feature:

- Withdrawable units or fixed units
- High unit density, up to 27 units per column
- Rotary handles
- Three or four wire power system capability
- Top-mounted, main bus up to 6000 A
- Fully metric design (hardware and exterior dimensions)
- Air circuit breaker mains and feeders available
- Standard safety features like arc-ignition protected zones and isolated unit power stab assemblies help protect employees and keep your process up and running

## Technical Specifications

Product certificates are located in the Rockwell Automation Literature Library at [rok.auto/literature](http://rok.auto/literature).

(1) Tin-plated copper is available upon request. Consult your local Rockwell Automation sales office for other plating options.

(2) Unit size is described in terms of modules.

(3) The average temperature over a 24-hour period must not exceed 35 °C (95 °F).

# System Architecture

EtherNet/IP™ enhances integration, helps reduce your MCC set-up time, and increases the network speed. With EtherNet/IP, you can quickly monitor, troubleshoot, and diagnose your MCC from anywhere. FLEXLINE 3500 MCCs provide robust motor control capabilities with access to the real-time data that you need by using a network that communicates with your entire enterprise.

The cost and performance of an EtherNet/IP network makes them ideal for MCC applications. Open specifications and protocol, managed by the Open DeviceNet® Vendor Association (ODVA), means that vendors are not required to purchase hardware, software, or licensing rights to connect to a system.

An EtherNet/IP system is qualified to communicate and perform under normal and adverse electrical environments. Its application can be plant-wide and over multiple disciplines through commercial off-the-shelf (COTS) products like Ethernet switches and devices.

An EtherNet/IP system has the following capabilities:

- Automatic Device Configuration (ADC) automatically downloads the IP address, firmware, and device parameter settings to a newly replaced device without user interaction, saving costly downtime
- Switch-level linear or switch-level ring topologies provide network flexibility for any sized operation
- Heavy traffic performance
- Add or subtract nodes on-the-fly
- Advanced network configuration, security, and diagnostics are provided by layer-2 managed Ethernet switches
- The EtherNet/IP system in the MCC is designed to operate at 100 Mbaud

## EtherNet/IP Connectivity

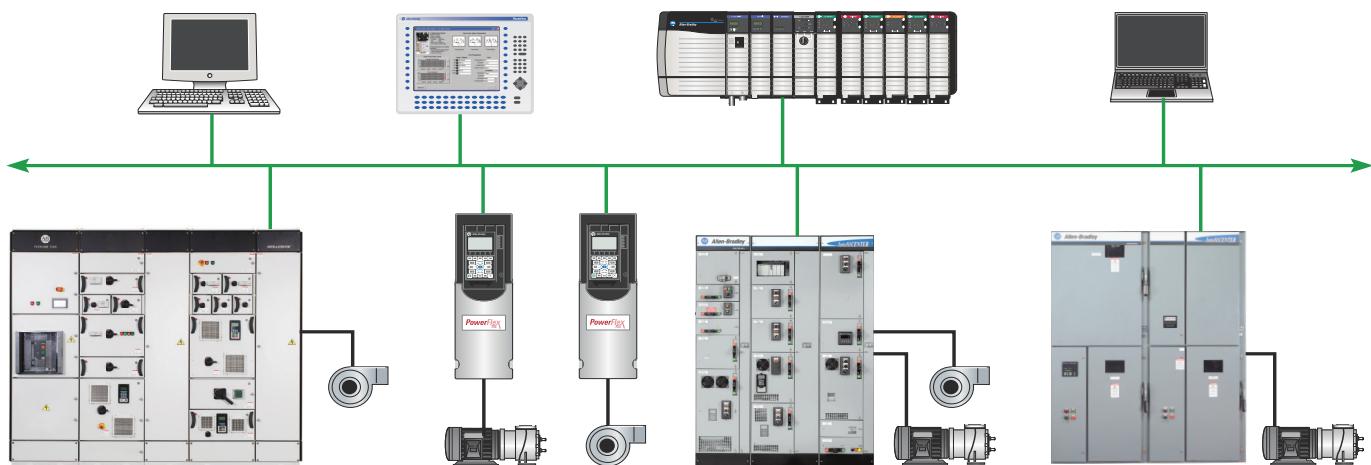

Each unit can be configured with an EtherNet/IP component.

- Mains and Feeders with an ACB can include an Ethernet/IP communication module.
- Starter units can include a solid-state overload relay, like the E300™ Electronic Overload Relay.
- AC drives can include an EtherNet/IP communication module and/or an embedded option.

Networks are factory assembled and connect each Ethernet/IP component with a 600V rated cable. Adding or removing units from the network does not interrupt the other units operating in the system.

Figure 2 - Sample System Diagram

# Structure

A typical FLEXLINE 3500 column consists of a functional unit space with a vertical cable compartment at the side or rear, main busbars at the top, and a horizontal cable compartment at the bottom. Column definition also applies to full-height units (frame-mounted) without side or rear cable compartment.

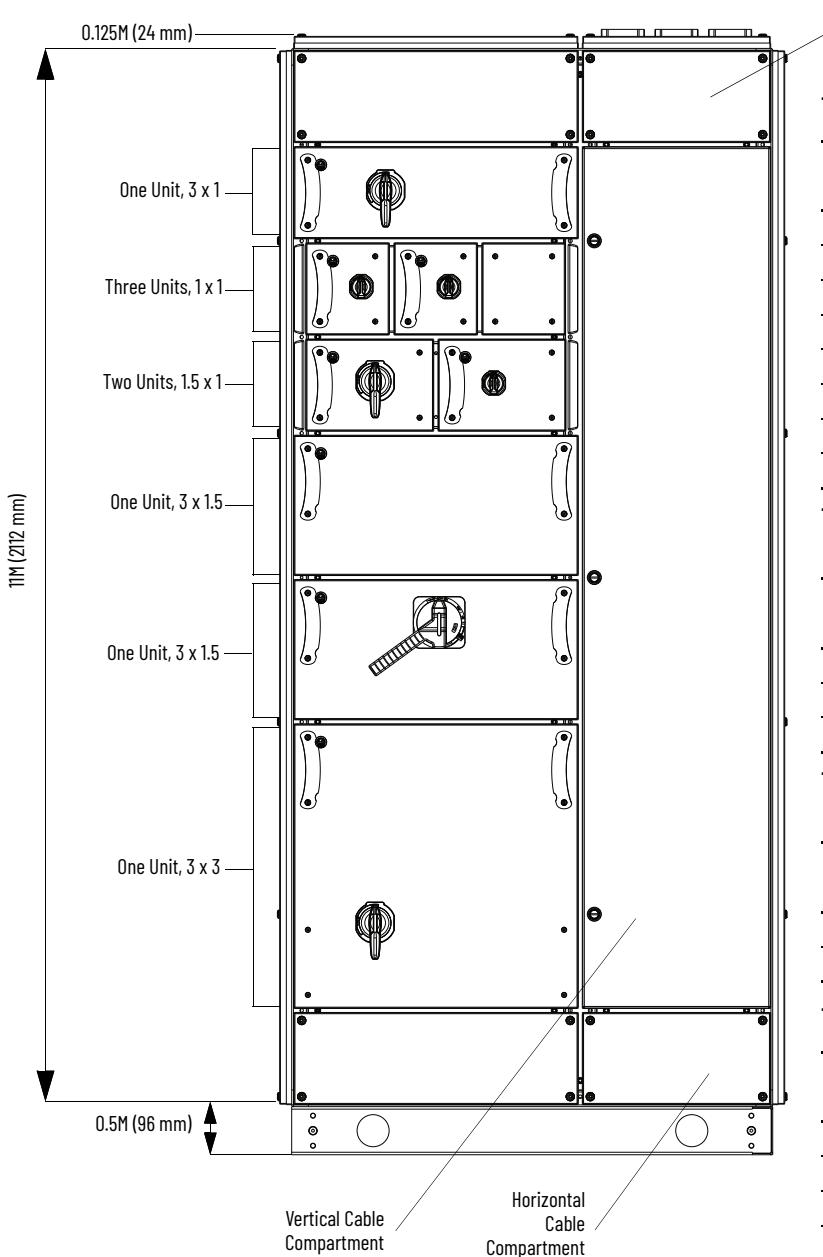

A typical FLEXLINE 3500 shipping block is one or more columns that are mounted in a single frame that must be shipped as one piece.

Columns and shipping blocks are described in terms of modules. Each module is approximately 192 mm wide by 192 mm tall.

Shipping blocks are secured at the installation site by bolting together clearance holes in the supports.

You can combine both fixed and withdrawable units up to form 4B in the same column. Fault containment is enhanced with partition plates on every column to help prevent a fault from cascading throughout the structure and limiting equipment damage. The vertical cable compartment can be in either the front or the rear side of the assembly.

**Figure 3 - Typical Column Configuration**

**Table 1 - Shipping Block Sizes**

Width [Modules]	Length	
	mm	in.
3	576	22.7
4	768	30.2
5	960	37.8

**Figure 4 - Typical Column With Withdrawable Units****Table 5 - Weight<sup>(1)</sup>**

<b>Shipping Block Size</b>	<b>Unit Space [Module]</b>	<b>Cable Compartment Size [Module]</b>	<b>Total Weight, kg</b>	
			<b>With S2000HD Busbar System</b>	<b>With S7000 Busbar System</b>
4 x 11 3	3	1	690	710
5 x 11 3	3	2	720	750
6 x 11 3	3	3	750	790
8 x 11 3	(2x) 3	(2x)1	1320	1400
9 x 11 3	(2x) 3	1 and 2	1350	1440
10 x 11 3	(2x) 3	(2x) 2	1370	1480

(1) Weights shown are for an MCC column with eight units. Many factors (number of units, horizontal power bus, wireway width, column depth, and shipment packaging) affect the actual weight. The packing slip that is shipped with an MCC unit shows the exact shipping weight.

## Arc Flash Containment

In addition to the standard safety features built into every FLEXLINE 3500 motor control centers, optional ArcShield™ technology provides enhanced arc resistance capabilities to meet your safety program.

ArcShield technology helps mitigate and protect personnel and equipment from the dangers of an arc flash incident. The technology helps contain an arc fault for the entire duration it takes the protective device to clear the fault.

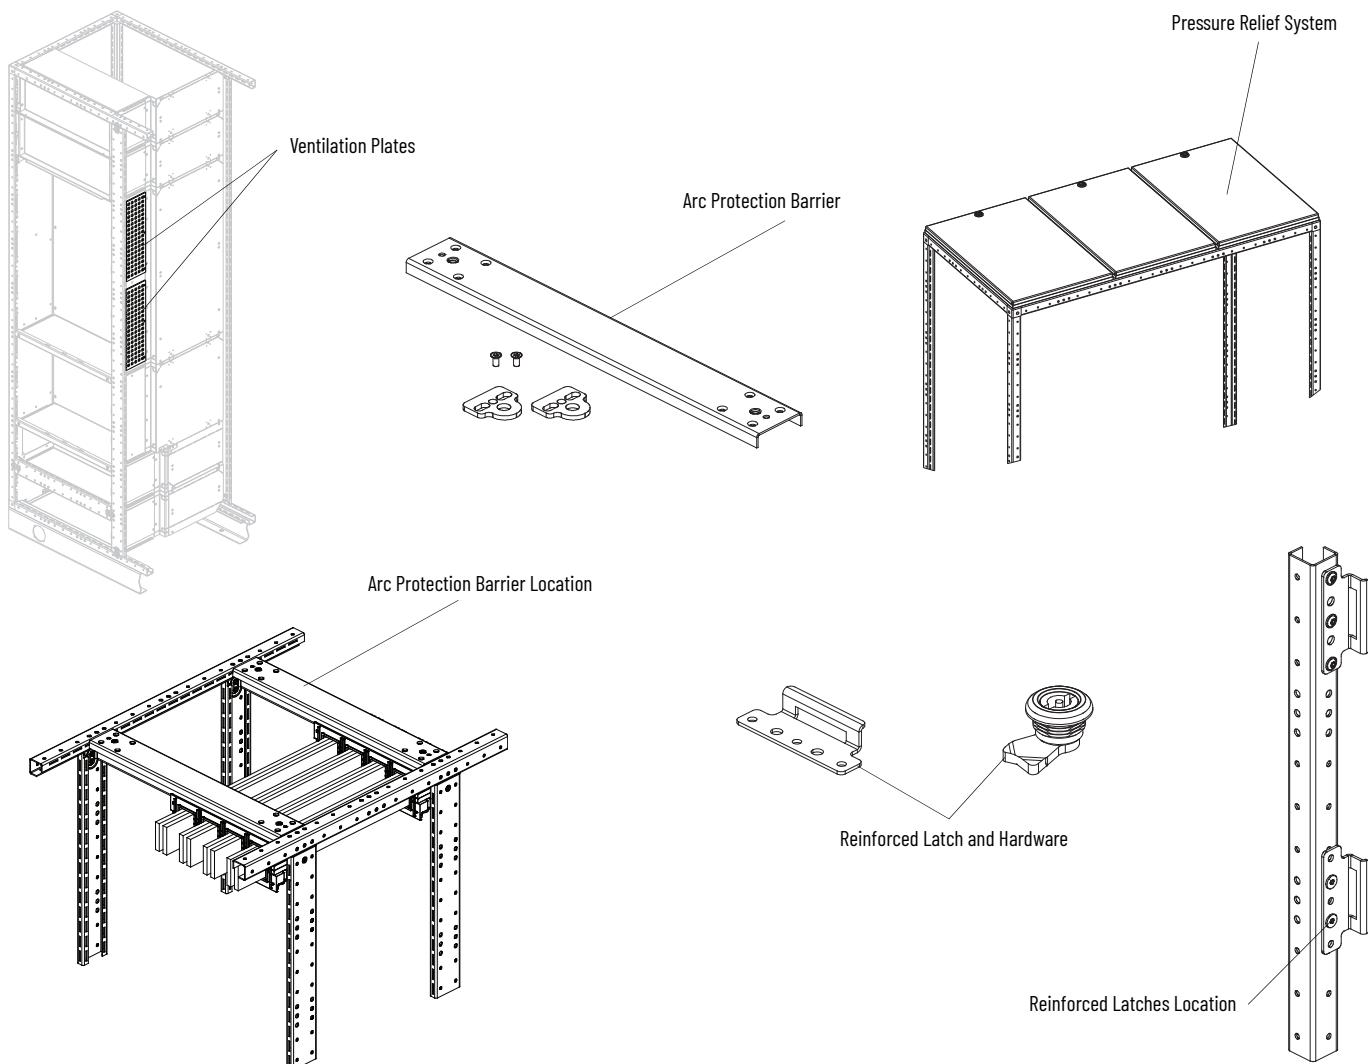

Motor control centers with ArcShield are tested with third-party validation against the IEC/TR 61641 standard that defines tests under conditions of arcing due to internal fault.

To deliver this type of safety and performance, an ArcShield MCC contains the following features:

- Reinforced bracing at the top
- Exhaust gas channeling to the top of the MCC
- Pressure relief systems for managed emissions
- Reinforced latches that keep the MCC doors closed
- Patented arc-resistant baffles that allow ventilation, yet provide arc resistance
- Optional optical and current sensing technologies for added MCC protection
- Separation between unit inserts and distribution busbar system

Contact your local Rockwell Automation sales office to learn of available ArcShield options.

**Figure 5 - ArcShield Column Protection Hardware**

# Power Systems

## Control and Incoming Power

FLEXLINE 3500 MCCs can be used on three-wire or four-wire systems, with or without the optional neutral bus. The neutral bus can be half-rated or full-rated.

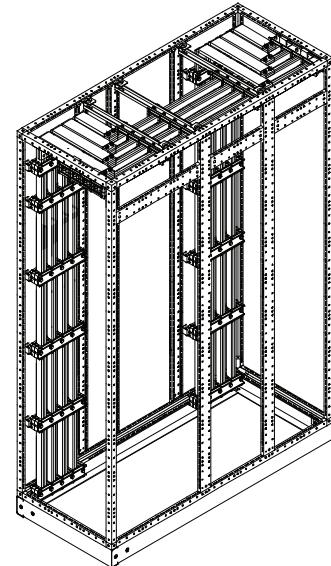

Control power options include DC or 50/60 Hz AC as required. Control voltage can be derived from the line supply through individual or central control transformers, and a line-neutral or DC power supply. The control voltage can also be provided remotely from the MCC.

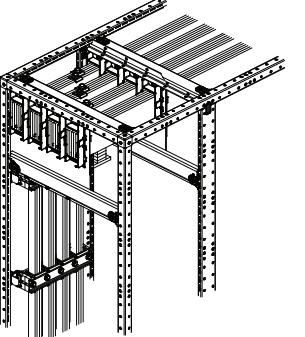

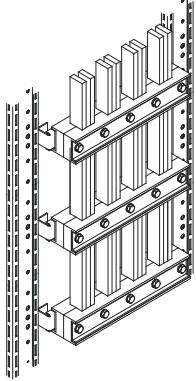

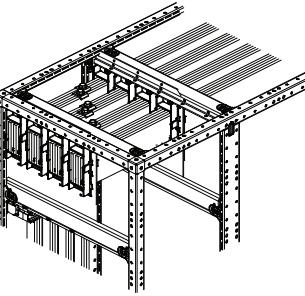

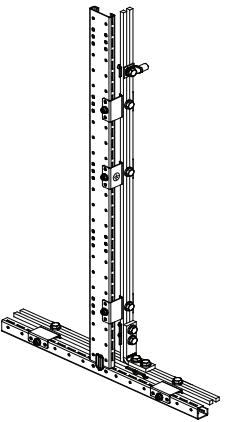

## Busbars

The busbar systems consist of standard components and cover a range of up to 6000 Amps. The systems are tested by DEKRA according to IEC 61439 to a short-circuit level of 120 kA for 1 second, and a peak withstand current of maximum 264 kA. The busbar sections are assembled in templates and fitted into the panel. With the specially developed assembly bolt, it is not necessary to drill holes or cut threads. The assembly bolt allows for an adjustable connection, exactly where it is needed on the busbar holders. All busbar joints are designated as maintenance-free according to DIN 43673. No retightening is necessary for the lifetime of the assembly.

Busbars are copper with copper quality CW008A or CW004A, according to EN13601:2013.

No drilling in the busbar is allowed. The busbars are mounted with minimum two bars in parallel per phase/neutral, and bolted together by type tested connections. This maintains the dynamic strength of the busbar, avoids reducing the busbar dimension, and to maximize the skin effect of the busbars.

Busbar System	Description	Busbar System	Description
Main Busbars - S2000HD	 <p>Continuous Current Rating, <math>I_e \leq 2700</math> A Short Circuit Peak Withstand, <math>I_{pk} \leq 176</math> kA Short Time Withstand Rating, <math>I_{cw} \leq 80</math> kA for 1 s Neutral (N) - Full or half-rated</p>	 <p>Continuous Current Rating, <math>I_e \leq 2000</math> A Short Circuit Peak Withstand, <math>I_{pk} \leq 220</math> kA Short Time Withstand Rating, <math>I_{cw} \leq 100</math> kA for 1 s</p>	
Main Busbars - S7000	 <p>Continuous Current Rating, <math>I_e \leq 6000</math> A Short Circuit Peak Withstand, <math>I_{pk} \leq 264</math> kA Short Time Withstand Rating, <math>I_{cw} \leq 120</math> kA for 1 s Neutral (N) - Full or half-rated</p>	 <p>Short Circuit Peak Withstand, <math>I_{pk} \leq 158.4</math> kA Short Time Withstand Rating, <math>I_{cw} \leq 72</math> kA for 0.1 s</p>	

## Main Busbars

- S2000HD and S7000 are available in three- and four-pole configurations and are top front mounted.
- The standard main power bus material is unplated copper. Tin-plated copper is available upon request.
- The main neutral bus is available with a full or half current rating, and matches the material and specifications of the main power bus.

**Table 6 - S2000HD Main Busbar System, Rated Short-time Withstand Current**

Busbar Cross-section	Rated Short-time Withstand Current, $I_{cw}$			
	30 kA, 1 s	50 kA, 1 s	65 kA, 1 s	80 kA, 1 s
(2) 10 x 20	✓	✓	—	—
(2) 10 x 30	✓	✓	—	—

	50 kA, 1 s	80 kA, 1 s	100 kA, 1 s	120 kA, 1 s
(2) 10 x 100	✓	✓	—	—
(3) 10 x 100	✓	✓	—	—
(4) 10 x 100	✓	✓	✓	—
(6) 10 x 100	✓	✓	✓	✓

**Table 8 - S2000HD Main Busbar System, Rated Current**

Busbar Cross-section <sup>(1)</sup>	Rated Current, $I_n$	
	[A]	[A]
(2) 10 x 20	970	
(2) 10 x 30	1460	
(2) 10 x 40	1640	
(2) 10 x 50	1830	
(2) 10 x 60	2020	
(2) 10 x 70	2200	
(2) 10 x 80	2400	
(2) 10 x 90	2550	
(2) 10 x 100	2700	

(1) Values are valid for 50 Hz (the rated current at 60 Hz shall be reduced to 95% of that at 50 Hz).

**Table 9 - S7000 Main Busbar System, Rated Current**

Busbar Cross-section <sup>(1)</sup>	Rated Current, $I_n$	
	[A]	[A]
(2) 10 x 100	2600	
(3) 10 x 100	3200	
(4) 10 x 100	4900	
(6) 10 x 100	6000	

(1) Values are valid for 50 Hz (the rated current at 60 Hz shall be reduced to 95% of that at 50 Hz).

## Distribution Busbars

S2000 busbars are available in three- and four-pole configurations. The distribution neutral bus is connected to the main neutral bus, and provides a neutral connection for units throughout the column.

**Table 10 - S2000 Distribution Busbar System, Rated Short-time and Peak Withstand Current**

Busbar Cross-section	Rated Peak Withstand Current, $I_{pk}$				
	$I_{pk} = 46.2 \text{ kA}$ $I_{cw} = 21.1 \text{ kA, 1s}$	$I_{pk} = 63 \text{ kA}$ $I_{cw} = 50 \text{ kA, 1s}$	$I_{pk} = 105 \text{ kA}$ $I_{cw} = 50 \text{ kA, 1s}$	$I_{pk} = 176 \text{ kA}$ $I_{cw} = 80 \text{ kA, 1s}$	$I_{pk} = 220 \text{ kA}$ $I_{cw} = 100 \text{ kA, 1s}$
(2) 10 x 10	✓	✓	—	—	—
(2) 10 x 20	✓	✓	✓	—	—
(2) 10 x 30	✓	✓	✓	✓	—
(2) 10 x 40	✓	✓	✓	✓	—
(2) 10 x 50	✓	✓	✓	✓	✓
(2) 10 x 60	✓	✓	✓	✓	✓

**Table 11 - S2000 Distribution Busbar System, Rated Current**

Busbar Cross-section	Max. Current Rating <sup>(1)</sup>	
	[A]	
(2) 10 x 10	770	
(2) 10 x 20	1150	
(2) 10 x 30	1500	
(2) 10 x 40	1650	
(2) 10 x 50	1850	
(2) 10 x 60	2000	

(1) Values are valid for 50 Hz (the rated current at 60 Hz shall be reduced to 95% of that at 50 Hz).

The rated current of FLEXLINE 3500 MCC is determined by thermal tests that account for operational ambient temperature limitations for Allen-Bradley components.

	Considerations
<b>Main Busbars</b>	<ul style="list-style-type: none"> <li>• Rated current</li> <li>• Short-circuit withstand rating</li> <li>• Possibilities for extensions</li> <li>• Busbar plating</li> <li>• Earthing system</li> <li>• Neutral busbar sizing</li> <li>• Form 2 covering</li> <li>• Transport division method</li> </ul>
<b>Distribution Busbars</b>	<ul style="list-style-type: none"> <li>• Rated current</li> <li>• Short-circuit withstand rating</li> <li>• Busbar plating</li> <li>• Earthing system</li> <li>• Busbar feeding brackets (optional)</li> <li>• Current transformer section (optional)</li> </ul>
<b>Ground Busbars</b>	<ul style="list-style-type: none"> <li>• Busbar cross-section</li> <li>• Short circuit withstand rating</li> <li>• Additional connectors for ground cables</li> <li>• PE Cu-Flex</li> </ul>

## Protective Earth Conductor

The horizontal protective earth (PE) conductor and vertical PE conductor form a complete internal protective earth circuit.

### Horizontal PE Conductor

Grounding Connector for  
Horizontal PE Conductor

The horizontal PE conductor is unplated copper (standard) or tin-plated copper (available upon request), and is in the bottom horizontal cable compartment. The horizontal PE conductor is continuous for the width of the column and consists of two parallel busbars with a cross-section from 10 x 10 up to 10 x 60 selected depending on the requirements. A special grounding connector can be installed on the horizontal PE to terminate the motor PE wires.

#### Horizontal PE Conductor

### Vertical PE Conductor for Customer Loads (Available as an Option)

The optional vertical PE conductor for customer loads is connected to the horizontal PE connector. This vertical PE conductor provides a termination point for the load ground cable that is adjacent to the unit. Without this option, the customer must connect to the horizontal PE conductor at the bottom of the column. The vertical PE conductor for customer loads can be unplated or tin-plated copper.

# Unit Design

## Modular Design

The versatility of the width, height, and depth of the FLEXLINE MCC means that it can be designed to suit its place of installation, and simultaneously ensures that the MCC can be modified or extended.

FLEXLINE 3500 MCCs can offer solutions based on our modular system for the following types of switchboards:

- Main and distribution switchboards
- MCC panels
- Control panels

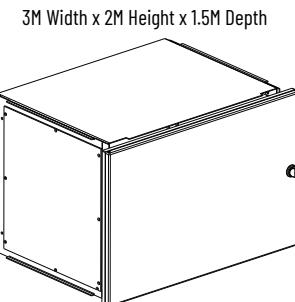

The FLEXLINE 3500 busbar system consists of standard components and covers a range up to 6000 A. The systems are tested according to IEC/EN 61439 to a short-circuit level of 120 kA for 1 second and a peak withstand current of 264 kA. The busbar sections are easily assembled in templates and fitted into the panel. With a specially developed assembly bolt, it is not necessary to drill holes or cut threads. The assembly bolt allows for an adjustable connection, exactly where it is needed on the busbar holders. All busbar joints are designated as maintenance-free according to DIN 43673.

With the FLEXLINE 3500 modular system, you can choose a separation from FORM 2...FORM 4, helping to ensure optimum personal safety and operational dependability according to IEC/EN 61439. All the necessary coverings and protection plates are available as standard parts of the modular system and require no adjustment.

## Fixed Units

**Multi-purpose Inserts (MPIs)** are designed as a box providing separation between other units. Components are mounted on a mounting plate. The insert is available in three depths (1, 1.5, and 2 modules).

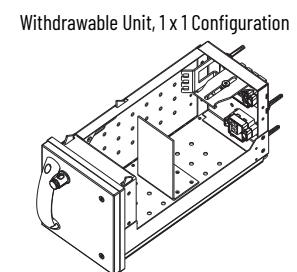

**Mounting plates and mounting profiles** (which are mounted directly to the frame) can be used for larger components. Various sizes and configurations are available. Mounting plates are available with busbar connections, and a mounting bracket can place the mounting plate in depths of 8 mm increments.

## Withdrawable Units

**Multi drawer (MD)** is a drawer unit that can be operated without disconnecting the main supply of the panel. A mechanical interlock helps to prevent the unit door from being opened while the main switch is in the ON/I position. An additional mechanical interlock helps to prevent the unit from being withdrawn or inserted when the unit main switch is closed.

The Multi Drawer is designed to optimize space in the panel and with the possibility of choosing drawers in sizes from 16...630 A. The Multi Drawer units are prepared for installation with all bus systems.

The MD units are delivered with:

- Main plug, 3P or 4P
- Holes for component installation
- Alignment connections
- Interlock
- Hinged door or drawer front
- Unit size ranges from 1 x 1...3 x 3 modules

# Unit Types

## Allen-Bradley Products in Units

You can populate columns and inserts with units, such as mains, feeders, direct-on-line starters, and AC drives. The following products have been configured and tested to work within standard unit types.

## Mains

Main incoming units permit customer connection to incoming power, and the main breaker provides the necessary protection to the main power bus of the MCC. These units can use either ACBs or MCCBs as standard sections. Breakers can be 3-pole or 4-pole with top or bottom customer cable access. Main incoming units are typically placed on the left, center, or right side of the MCC. Numerous options are available for both ACBs and MCCBs to meet the needs of the most demanding applications.

### Main Air Circuit Breaker (ACB) Units

Air circuit breaker mains are available in 630...6300 A configurations. Main incoming units that use an ACB provide a withdrawable main breaker for ease of service. These units are front accessible with shutters for added safety when removed. All mains with ACBs are 11 modules high, with three dedicated compartments; metering, breaker, and incoming termination.

#### Main ACB Options

- Metering
- Electrical charging device
- Closing release
- Shunt release
- Undervoltage release
- Key and padlocking
- Additional auxiliary signaling contacts
- Locking cradle shutters
- Thermography
- EtherNet/IP communication module

		4P	8				

(1) Width may vary depending on the ACB position in the lineup.

(2) Values are valid for 50 Hz (the rated current at 60 Hz shall be reduced to 95% of that at 50 Hz).

(3) Include a 100 mm air gap behind the column for single front configurations.

(4) IP43 configuration requires engineering work. Contact your Rockwell Automation sales representative for availability.

## Main Molded Case Circuit Breaker (MCCB) Units

Main MCCB units are available in up to 1200 A configurations. Main incoming units use a molded case circuit breaker with a thermal magnetic or electronic trip. These units are smaller than ACBs units, and can be placed in a withdrawable column with other functional units.

### MCCB Options

- Metering
- Motorized operation
- Closing release
- Shunt trip
- Undervoltage release
- Auxiliary contacts
- Thermography

**Table 13 - Mains, MCCB**

Load $I_{nc}$ [A]	Unit Size W x H <sup>(1)</sup>	Unit Type	Column Position	Circuit Breaker					Short Circuit Current Ratings $I_{cc}$ (kA)		
				Trip Rating [A]	Pole <sup>(2)</sup>	Trip Unit Type <sup>(3)</sup>					
						Adjust Thermal/ Adjust Magnetic	Electronic LSI <sup>(4)</sup>	Electronic LSIG <sup>(5)</sup>	415V	480V	690V
480	3 x 5	Fixed	Bottom Only	600	3P	140G-MOF3-D60	140G-MOH3-D60	140G-MO13-D60	100	65	—
504	3 x 5	Fixed	Bottom Only	630	3P	140G-MOF3-D63	140G-MOH3-D63	140G-MO13-D63	100	65	—
640	3 x 5	Fixed	Bottom Only	800	3P	140G-MOF3-D80	140G-MOH3-D80	140G-MO13-D80	100	65	—
960	3 x 6	Fixed	Bottom Only	1200	3P	—	140G-NOH3-E12	140G-NO13-E12	100	65	50

(1) Unit height increases by 1M if PowerMonitor is used.

(2) Consult your local Rockwell Automation sales office if a 4P circuit breaker is required for feeder applications with MCCB.

(3) Catalog numbers for 140G-M,N refer to circuit breaker version that has the highest short circuit interrupting rating. For other ratings, see [Circuit and Load Protection on page 14](#).

(4) Long, short, instant.

(5) Long, short, instant, ground fault.

## Feeders

Numerous feeder options are available for power distribution from within your switchgear or MCC application. For larger power demands, the ACB is commonly used. The ACB available range is from 630...2500 A. Smaller power applications often use a molded case circuit breaker (MCCB). The standard range for the MCCBs is 0.5...1200 A. All feeders can be provided as 3-pole or 4-pole.

### Feeders Air Circuit Breaker (ACB) Units

Feeder incoming units that use an air circuit breaker provide a withdrawable feeder breaker for ease of service. These units are front accessible with shutters for added safety when removed. All feeders with ACBs are 11 modules in height. All ACBs include a microprocessor-based trip unit.

#### Feeder ACB Options

- Metering
- Motorized operation
- Electrical charging device
- Closing release
- Shunt release
- Undervoltage release
- Key and padlocking
- Additional auxiliary signaling contacts
- Locking cradle shutters
- EtherNet/IP communication module

**Table 14 - Feeders, ACB**

ABB ACB Frame	ACB Trip Unit Rating [A]	Pole, Qty	Column Width, Modules <sup>(1)</sup>	Column Depth, Modules	Feeder, ACB		Rated Short-time Withstand Current $I_{cw}$ , kA
					Load Inc [A] <sup>(2)</sup>	IP43 <sup>(3)(4)</sup>	
E1.2	630	3P / 4P	3	3	630	630	≤ 42, 1 s
	800	3P / 4P	3	3	800	800	≤ 42, 1 s
	1000	3P / 4P	3	3	1000	1000	≤ 42, 1 s
	1250	3P / 4P	3	3	1250	1250	≤ 42, 1 s
	1600	3P / 4P	3	3	1300	1520	≤ 42, 1 s
E2.2	800	3P / 4P	3	3	800	800	≤ 65, 1 s
	1000	3P / 4P	3	3	1000	1000	≤ 65, 1 s
	1250	3P / 4P	3	3	1250	1250	≤ 65, 1 s
	1600	3P / 4P	3	3	1600	1600	≤ 65, 1 s
	2000	3P / 4P	3	3	1600	1810	≤ 65, 1 s
	2500	3P / 4P	4	3	1950	2400	≤ 80, 1 s
E4.2	2500	3P / 4P	4	3	1950	2400	≤ 80, 1 s

(1) Width may vary depending on the ACB position in the lineup.

(2) Values are valid for 50 Hz (the rated current at 60 Hz shall be reduced to 95% of that at 50 Hz).

(3) Include a 100 mm air gap behind the column for single front configurations.

(4) IP43 configuration requires engineering work. Contact your Rockwell Automation sales office for availability.

## Feeder Molded Case Circuit Breaker (MCCB) Units

Feeder MCCB units are placed within the withdrawable column with other functional units, which provides flexibility to place the units where they best suit your needs. MCCB feeders are withdrawable up to 400 A. Units larger than 400 A are fixed mount.

### Feeder MCCB Options

These Feeder unit options are dependent on the available space on the cover and inside the unit.

- Auxiliary contact for circuit breaker
- Shunt trip coil for circuit breaker
- Alarm contact for circuit breaker
- Minimum voltage coil (undervoltage) for circuit breaker
- Combination auxiliary contact and alarm contact for circuit breaker
- Metering

(1) Consult your local Rockwell Automation sales office if a 4P circuit breaker is required for feeder applications with an MCCB.

(2) Catalog numbers refer to the circuit breaker version that has the highest short circuit interrupting rating. For other ratings, see [Circuit and Load Protection on page 14](#).

(3) Long, short, instant.

(4) Long, short, instant, ground fault.

(5) 690V ratings refer to the 140G-J15 trip version.

(6) Unit height increases by 1M if PowerMonitor is used.

## Starters

### DOL and DOLR Starter Units

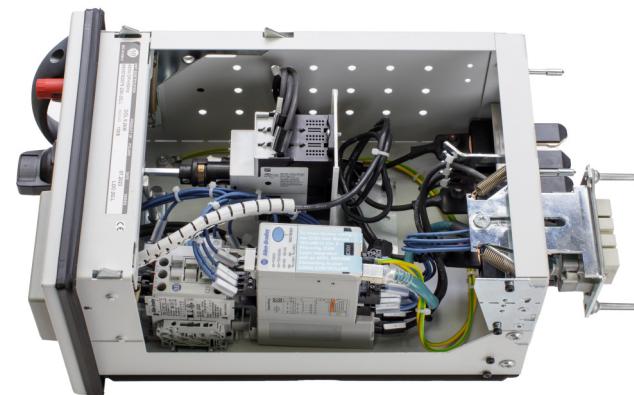

Direct-on-line (DOL) nonreversing starter units are supplied with Allen-Bradley Bulletin 100-C or 100-E contactors and a circuit breaker disconnect. These units are available with an E300 Electronic Overload Relay or E100 Electronic Overload Relay. Starter units are available in withdrawable or fixed configurations.

Direct-on-line reversing (DOLR) starter units are supplied with Allen-Bradley Bulletin 104-C or 104-E contactors and a circuit breaker disconnect. The starters are mechanically and electrically interlocked to avoid both contactors being closed simultaneously. These units are available with an E300 Overload Relay or E100 Solid-state Overload Relay. DOLR starter units are available in withdrawable or fixed configurations.

#### DOL and DOLR Starter Unit Options

These starter unit options are dependent on the available space on the cover and inside the unit.

- Auxiliary contact for contactors
- Auxiliary contact for circuit breaker
- Surge suppressor
- Control circuit transformer
- Push buttons
- Pilot lights
  - Status indicator
  - Status indicator, push-to-test
- Selector switch
  - Two-position
  - Three-position
- EtherNet/IP communication module
- Door-mounted overload relay control station

## Variable Frequency Drives

The combination variable-frequency AC drive units, for use in the FLEXLINE 3500 motor control centers, contain a variable frequency AC drive and a circuit breaker disconnect. PowerFlex VFD units are available in withdrawable or fixed unit configurations.

Available standard models include:

- PowerFlex 523
- PowerFlex 525
- PowerFlex 753
- PowerFlex 755
- PowerFlex 755TS

### PowerFlex 523/525 Drive Unit Selection

(2) Contact your local Rockwell Automation sales office if higher short circuit ratings are required.

(3) Only available using MPI unit configuration.

## PowerFlex 525 Drive Unit Options

These drive unit options are dependent on the available space on the cover and inside the unit.

- Auxiliary contact for circuit breaker
- Control circuit transformer
- Push buttons
- Pilot lights
- ControlNet®, EtherNet/IP, and PROFIBUS DP communication module, mounted internal to drive
- Human interface module
- I/O control interface type
  - 24V DC sink or source control (via DIP switch setting)
- External EMC filters are optional
- Line or load reactors are optional

## PowerFlex 753, 755, and 755TS Drive Unit Selection

### PowerFlex 753, 755 and 755TS Drive Unit Options

- Auxiliary contact for circuit breaker
- Control circuit transformer
- Push buttons
- Pilot lights
- EtherNet/IP communication module, mounted internal to drive
- Human interface module
- I/O control interface type
- Line or load reactors are optional
- Functional Safety options

## Central Transformer

**Table 34 - 3597 Central Transformer**

Power Rating [kVA]	Unit Size W x H	Unit Type	Column Position	Primary Circuit Breaker	Secondary Circuit Breaker	
					115V AC	230V AC
2	3 x 3	Fixed	Bottom	140MT-D9T-B40	1492-SPM2C160	1492-SPM2C080
3	3 x 3	Fixed	Bottom	140MT-D9T-B63	1492-SPM2C250	1492-SPM2C100

16	3 x 5	Fixed	Bottom	140G-G6C3-C60	140G-J6F3-D12	140G-G6C3-C60

## Power Supply

An EtherNet/IP network in the MCC requires a power supply that provides 24V DC. A quality power supply is essential to reliable system operation. To help system integrity and reliability, an Allen-Bradley 10 A power supply unit is recommended. This power supply can be supplied with a buffer for enhanced ride-through performance. A redundant power supply is also available for added reliability.

The EtherNet/IP back-up power supply is available for unit-level back-up. It seamlessly transfers network power if there is a loss of main network supply. There is no loss of component function. When the main EtherNet/IP power recovers, there is automatic retransfer to the primary power supply.

**Table 35 - Power Supply**

Output Voltage [V]	Output Current [A]	Input Voltage [V]	Power [W]	Unit Size [W x H]	Unit Type <sup>(1)</sup>	Power Supply	Circuit Breaker

## Additional Resources

These documents contain additional information concerning related products from Rockwell Automation. You can view or download publications at [rok.auto/literature](http://rok.auto/literature).

Resource	Description
FLEXLINE 3500 Motor Control Center User Manual, publication <a href="#">FLXLN-UM001</a>	Describes how to install cables and columns, install units, commissioning, maintenance, and security for FLEXLINE 3500 MCCs.
EtherNet/IP Network Devices User Manual, publication <a href="#">ENET-UM006</a>	Describes how to configure and use EtherNet/IP devices to communicate on the EtherNet/IP network.
Ethernet Reference Manual, publication <a href="#">ENET-RM002</a>	Describes basic Ethernet concepts, infrastructure components, and infrastructure features.
System Security Design Guidelines Reference Manual, publication <a href="#">SECURE-RM001</a>	Provides guidance on how to conduct security assessments, implement Rockwell Automation products in a secure system, harden the control system, manage user access, and dispose of equipment.
UL Standards Listing for Industrial Control Products, publication <a href="#">CMPNTS-SR002</a>	Assists original equipment manufacturers (OEMs) with construction of panels, to help ensure that they conform to the requirements of Underwriters Laboratories.
American Standards, Configurations, and Ratings: Introduction to Motor Circuit Design, publication <a href="#">IC-ATO01</a>	Provides an overview of American motor circuit design based on methods that are outlined in the NEC.
Industrial Components Preventive Maintenance, Enclosures, and Contact Ratings Specifications, publication <a href="#">IC-TD002</a>	Provides a quick reference tool for Allen-Bradley industrial automation controls and assemblies.
Safety Guidelines for the Application, Installation, and Maintenance of Solid-state Control, publication <a href="#">SGI-11</a>	Designed to harmonize with NEMA Standards Publication No. ICS 1.1-1987 and provides general guidelines for the application, installation, and maintenance of solid-state control in the form of individual devices or packaged assemblies incorporating solid-state components.
Industrial Automation Wiring and Grounding Guidelines, publication <a href="#">I770-4.1</a>	Provides general guidelines for installing a Rockwell Automation industrial system.
Product Selection and Configuration tools, <a href="#">rok.auto/systemtools</a>	Helps configure complete, valid catalog numbers and build complete quotes based on detailed product information.
Rockwell Automation Global SCCR tool, <a href="#">rok.auto/sccr</a>	Provides coordinated high-fault branch circuit solutions for motor starters, soft starters, and component drives.
Product Certifications website, <a href="#">rok.auto/certifications</a>	Provides declarations of conformity, certificates, and other certification details.

# Rockwell Automation Support

Use these resources to access support information.

<b>Technical Support Center</b>	Find help with how-to videos, FAQs, chat, user forums, Knowledgebase, and product notification updates.	<a href="http://rok.auto/support">rok.auto/support</a>
