

Automotive

BY THE NUMBERS

The automotive industry is continuously evolving, and for companies to remain competitive, there is an increased need to adopt innovations that lead the way for new and refresh vehicles to get to market faster. A simplified, scalable, and proven controls framework is needed to ensure successful launches.

Solutions that enhance the vehicle launch process can help optimize operations and create flexibility

Flexible manufacturing

up to **50%** reduction in project development

Plant optimization

Reduce operating cost up to **25-35%**

\$20B

In cost of unscheduled downtime¹

\$65B

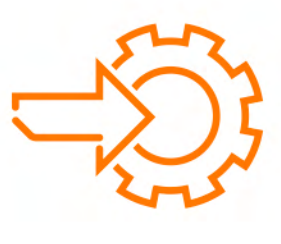

Of the global installed base of legacy automation systems are reaching the end of their usual life¹

80%

Of the "Big 3" North America auto assembly plants are >20 years old²

Simplifying the complex

Can a more advanced specification framework help you achieve faster launches and optimize manufacturing?

Product lifecycle optimization

Reduce project startup cost

Reduce training costs

Increase global manufacturing production

Proven, tested, flexible standards
