

# Reports and dashboards for industry

Turn raw data from Rockwell Automation into actionable information

The continuous increase in process data requires mechanisms to easily identify trends, behavior and actionable information to ultimately increase efficiency and reduce costs.

## XLReporter Professional

XLReporter is a reporting solution perfect for any sized system and budget. Automatic reports directly from a PLC, on-demand web reports from a historian, ISA 18.2 alarm analytics, CFR Part11 security features and automated emails are a few of the many features to empower users with right report at the right time.

### Design rapidly

Design report templates using your existing knowledge of workbook features such as charts and formula.

As your systems get larger, the product will scale to meet your needs.

- Easy access to Rockwell Automation data
- Microsoft Open Office
- Scalable design

### Report automatically

Turn raw data into analytical reports and send them to the right person using methods such as email and ftp.

Replace manual data entry with automation and improve the data collection process.

- Automatic reports
- Automatic distribution
- Replace manual data entry

### Empower immediately

Users with immediate access to information work more effectively.

From timely reports in their inbox or access to dashboards from a web browser, continuous data flow will lead to improvements.

- Information readily available
- Easy access by web browser
- Maintain compliance

## List of products or product families within the portfolio

- XLReporter Professional

## Industries we support

- Automotive
- Chemical
- Food & Beverage
- Life Sciences (BioTech)
- Manufacturing
- Mining
- Oil & Gas
- Power & Energy
- Water Treatment
- Wastewater Treatment

## About us

SyTech's XLReporter turns raw process data into actionable information, increasing efficiency and reducing costs. It is built on the Microsoft Open Office standard and is the leading reporting platform in industry to deliver workbook technology to an automated environment.
