

Trusted 3D machine vision provider

Leading industrial-grade 3D scanner for reliable automation results.

Hermary's 3D vision technologies have enabled industrial automation that improved manufacturers' throughput and quality beyond what was humanly possible for over 30 years.

Hermary 3D laser scanners are designed for easy system integration, intuitive programming and flexible and scalable solutions. Our scanners capture 3D measurements of target objects with precision and accuracy, giving your applications high-resolution data that can be easily fed downstream for processing.

Collaborative partnership

We approach each project by understanding the application's needs with in-depth discussions and onsite analysis. We believe in providing comprehensive solutions and work closely with integration professionals to develop industry-specific automation systems as well as a long-term partnership.

- Partner-exclusive training and online access to technical documents
- Integration partner recommendations for end users

Ease of integration

Hermary's 3D vision scanners are factory-calibrated, giving integrators simplicity and flexibility for ultimate system performance. Our 3D scanners are designed so no additional lighting is required, suitable even for outdoor applications.

- More than 18,000 successful installations worldwide
- Machine vision provider for industries such as wood/food/aerospace/paper and many more

Guaranteed return on investment

With over three decades of proven performance in harsh industrial environments such as lumber, food or metal, manufacturers using Hermary's machine vision solutions see a positive ROI due to long product lifespan, ease of operation and quick deployments.

- Sawmills in North America are still running on Hermary's scanners developed in 1990
- End users see 60% more in resource recovery after installment

List of products or product families within the portfolio

- SL-1880 Fully-Integrated Sheet of Light 3D Scanner
- DPS-824S1 High-Speed Coplanar 3D Scanner
- DPS-4024HA Ultra High Ambience Coplanar 3D Scanner
- LRS Compact Single-Point Laser Range Sensor

Industries we support

- Wood/lumber
- Food processing
- Metal
- Aerospace
- Vision-guided robots
- Bakery automation
- Paper/pulp

About us

For over 26 years Hermary has been the leading innovator in the design and engineering of machine vision technology, enabling companies in a wide range of industries to automate and optimize production with confidence. With over 17,000 product installations, their technological innovation and meticulous engineering for reliable, accurate performance in even the toughest environments has proven their value in delivering superior long-term ROI and setting the industry standard. Their products have helped hundreds of companies improve safety, quality and raw-material utilization while reducing downtime and waste. Their support raises the bar for industry expectations. To this day Hermary still supports its first product and client. Hermary continues to lead in innovations for its design and engineering, continuously creating new applications that enable companies to achieve levels of efficiency and productivity in manufacturing that go far beyond what is humanly possible.
