Product Information Sheet

Rockwell Automation
1201 South Second Street
Milwaukee, WI 53204
Telephone: 414.382.2000
Internet: www.rockwellautomation.com
Date of preparation: May 18, 2015

Product: Lithium Battery
Type: Portable Coin Cell Battery
Rockwell Automation Catalog No: 1770-XYC
Cell Manufacturer: Panasonic
Cell Manufacturer P/N: BR-A
Lithium Content: 0.6g

Product Identification
Rockwell Automation has assigned catalog number 1770-XYC to a Battery Assembly which contains Panasonic Lithium Battery Cell, part number BR-A. Panasonic’s Safety Data Sheet (SDS) for this Lithium Battery Cell follows.

Product Classification
The Rockwell Automation Lithium Battery Assembly, catalog no. 1770-XYC, is exempted from dangerous goods regulations as the following requirements are met:

- US DOT 49CFR, 173.185
- Dangerous Goods Regulation, per IATA, Packing Instructions 968, Section II
- Special Provisions ADR 188, IMDG 188

Additional Information
Rockwell Automation is committed to demonstrating the highest standard of global environmental management. We embrace this as a core value and an integral part of all operations and seek continual improvement of our environmental management system and performance.

You can find additional information regarding Rockwell Automation Product Environmental Compliance programs at:

Please send any additional inquiries regarding Product Environmental Compliance to:
ProductStewardship@ra.rockwell.com

Product Safety Data Sheet (SDS) follows
This product is a consumer product which is used in a hermetically sealed state. So, it is not an object of the SDS system. This document is provided to customers as reference information for the safe handling of the product. The information and recommendations set forth are made in good faith and are believed to be accurate at the date of preparation. Panasonic Corporation makes no warranty expressed or implied.

**PRODUCT SAFETY DATA SHEET**

1 **Product and Company Identification**

- **Name of Product**: Poly-carbon monofluoride lithium battery
- **Name of Company**: Panasonic Corporation, Automotive & Industrial Systems Company
- **Address**: 1-1 Matsushita-cho, Moriguchi City, Osaka, 570-8511, Japan
- **Division**: Energy Device Business Division
- **Department**: Product Engineering Group
- **Telephone number**: +81-6-6994-4537
- **For emergency**: +81-6-6991-1141

2 **Hazards Identification**

- **GHS Classification**: Not applicable
- **Hazard**: Electrolyte and lithium metal are inflammable.
  
  Risk of explosion by fire if batteries are disposed in fire or heated above 100 degrees C.

  Stacking or jumbling batteries may cause external short circuits, heat generation, fire or explosion.

- **Toxicity**: Vapor generated from burning batteries, may make eyes, skin and throat irritate.

3 **Composition/Information of Ingredients**

4 First Aid Measures

The product contains organic electrolyte. In case of electrolyte leakage from the battery, actions described below are required.

Eye contact : Flush the eyes with plenty of clean water for at least 15 minutes immediately, without rubbing. Take a medical treatment. If appropriate procedures are not taken, this may cause an eye irritation.

Skin contact : Wash the contact areas off immediately with plenty of water and soap. If appropriate procedures are not taken, this may cause sores on the skin.

Inhalation : Remove to fresh air immediately. Take a medical treatment.

5 Fire Fighting Measures

Extinguishing method : Since vapor, generated from burning batteries may make eyes, nose and throat irritates, be sure to extinguish the fire on the windward side. Wear the respiratory protection equipment in some cases.

Fire extinguishing agent : Alcohol-resistant foam and dry sand are effective.

6 Accidental Release Measures (in case of electrolyte leakage from the battery)

● Take up with absorbent cloth.
● Move the battery away from the fire.

7 Handling and Storage

● When packing the batteries, do not allow battery terminals to contact each other, or contact with other metals. Be sure to pack batteries by providing partitions in the packaging box, or in a separate plastic bag so that the single batteries are not mixed together.
● Use strong material for packaging boxes so that they will not be damaged by vibration, impact, dropping and stacking during their transportation.
● Do not recharge batteries. Do not deform batteries.
● Do not mix different type of batteries.
● Do not solder directly onto batteries.
● Do not let water penetrate into packaging boxes during their storage and transportation.
● Do not store the battery in places of the high temperature or under direct sunlight or in front of a stove. Please also avoid the places of high humidity. Be sure not to expose the battery to condensation, water drop or not to store it under frozen condition.
● Fire fighting apparatus should be installed.
8 Exposure Controls and Personal Protection (in case of electrolyte leakage from the battery)
   Acceptable concentration: Not specified in ACGIH.
   Facilities: Provide appropriate ventilation system such as local ventilator in the storage place.
   Protective clothing: Gas mask for organic gases, safety goggle, and safety glove.

9 Physical and Chemical Properties
   Appearance: Cylindrical shape
   Voltage: 3 volts

10 Stability and Reactivity
   Since batteries utilize a chemical reaction they are actually considered a chemical product. As such, battery performance will deteriorate over time even if stored for a long period of time without being used. In addition, the various usage conditions such as discharge, ambient temperature, etc. are not maintained within the specified ranges the life expectancy of the battery may be shortened or the device in which the battery is used may be damaged by electrolyte leakage.

11 Toxicological Information (in case of electrolyte leakage from the battery)
   Acute toxicity: Oral(rat) LD50 > 2,000mg/kg (estimated)
   Irritation: Irritating to eye and skin.
   Mutagenicity: Not specified.
   Chronic toxicity: Not specified.

12 Ecological Information
   In case of the worn-out battery was disposed in land, the battery case may be corroded, and leak electrolyte. But, we have no ecological information.

13 Disposal Considerations
   When the battery is worn out, dispose of it under the ordinance of each local government or the law issued by relating government.
14 Transport Information

During the transportation of a large amount of batteries by ship, trailer or railway, do not leave them in the places of high temperatures and do not allow them to be exposed to condensation.

During the transportation do not allow packages to be fallen down or damaged.

UN Number : UN3090 (only for the Air transport, over 8-cells per package)

Even though the cells are classified as lithium metal batteries (UN3090/UN3091), they are exempted from Dangerous Goods because they meet the following:

1. for cells, the lithium content is not more than 1g;
2. each cell is of the type proven to meet the requirements of each test in the UN Manual of Tests and Criteria, Part III, sub-section 38.3.
3. each cell is manufactured in ISO9001 certified factory.

Proper shipping Name : Lithium metal batteries

UN Class : Class 9 (only for the Air transport, over 8-cells per package)

Not Applicable

Please refer to the following reference information about concrete ways of transportation. Actual content of packaging label and shipping documents varies by shipping companies. Make sure to confirm in advance with your shipping company.

15 Regulatory Information

IATA Dangerous Goods Regulations
IMO International Maritime Dangerous Goods Code
16 Other Information

This PSDS is provided to customers as reference information in order to handle batteries safely. It is necessary for the customer to take appropriate measures depending on the actual situation such as the individual handling, based on this information.
