User Manual

Time Recorder Extension Module for the Dynamix 2500 Data Collector

Catalog Number 1441-DYN25-MREC
Important User Information

Solid-state equipment has operational characteristics differing from those of electromechanical equipment. Safety Guidelines for the Application, Installation and Maintenance of Solid State Controls (publication SGI-1.1 available from your local Rockwell Automation sales office or online at http://www.rockwellautomation.com/literature/) describes some important differences between solid-state equipment and hard-wired electromechanical devices. Because of this difference, and also because of the wide variety of uses for solid-state equipment, all persons responsible for applying this equipment must satisfy themselves that each intended application of this equipment is acceptable.

In no event will Rockwell Automation, Inc. be responsible or liable for indirect or consequential damages resulting from the use or application of this equipment.

The examples and diagrams in this manual are included solely for illustrative purposes. Because of the many variables and requirements associated with any particular installation, Rockwell Automation, Inc. cannot assume responsibility or liability for actual use based on the examples and diagrams.

No patent liability is assumed by Rockwell Automation, Inc. with respect to use of information, circuits, equipment, or software described in this manual.

Reproduction of the contents of this manual, in whole or in part, without written permission of Rockwell Automation, Inc., is prohibited.

Throughout this manual, when necessary, we use notes to make you aware of safety considerations.

---

**WARNING:** Identifies information about practices or circumstances that can cause an explosion in a hazardous environment, which may lead to personal injury or death, property damage, or economic loss.

**ATTENTION:** Identifies information about practices or circumstances that can lead to personal injury or death, property damage, or economic loss. Attentions help you identify a hazard, avoid a hazard, and recognize the consequence

**SHOCK HAZARD:** Labels may be on or inside the equipment, for example, a drive or motor, to alert people that dangerous voltage may be present.

**BURN HAZARD:** Labels may be on or inside the equipment, for example, a drive or motor, to alert people that surfaces may reach dangerous temperatures.

**IMPORTANT** Identifies information that is critical for successful application and understanding of the product.

Rockwell Automation Publication 1441-UM009A-EN-P - May 2011
This manual describes the Time Recorder Extension Module for the Dynamix 2500 data collector. You install the extension module with the Time Recorder Secure Digital (SD) card.

See Installing Optional Extension Modules on page 7 for installation instructions.

When using the Dynamix 2500 data collector and the Time Recorder module, you can use as a data collector for real-time data acquisition and analysis.

Optional Extension Modules

These are the optional extension modules for the Dynamix 2500 data collector:

- **1441-DYN25-4C, 4-Channel Activation (1)**
  The 4-channel activation lets you take 3 and 4 channel magnitude, time waveform, spectra, and Offroute measurements.

- **1441-DYN25-MBMP Bump Test**
  A bump test (or hammer test) determines the natural frequencies of a machine or a structure.

- **1441-DYN25-MBAL Balancing**
  Balancing application resolves single-plane, two-plane, and static-couple balances with high precision.

- **1441-DYN25-MFRF Frequency Response Function**
  The FRF test lets you determine the natural frequencies of a machine as well as sophisticated information about the frequency response of the structure being tested.

- **1441-DYN25-MREC Time Recorder**
  The Time Recorder test uses a the instrument as a data recorder for real-time data acquisition and analysis.

- **1441-DYN25-MRUC Run Up Coast Down**
  The RUCD test records and analyzes data from intermittent events and transient vibration signals from non-steady state machines.

See Additional Resources on page 6 for a listing of available publications.

---

(1) This is an activation license for the Dynamix 2500 data collector.
These documents contain additional information concerning products from Rockwell Automation.

Chapter 1

Installing Optional Extension Modules

The data collector uses the Extension Manager to install and uninstall extension modules. These extension modules are licensed and ordered separately from the basic entry level product.

<table>
<thead>
<tr>
<th>Topic</th>
<th>Page</th>
</tr>
</thead>
<tbody>
<tr>
<td>Install Extension Modules</td>

<td>12</td>
</tr>
<tr>
<td>Extension Module Battery Status Indicators</td>
<td>13</td>
</tr>
</tbody>
</table>

The installation Secure Digital (SD) cards that you receive work with any Dynamix 2500 data collector. Once you have installed an extension module, the card is locked so that it can only be used with that instrument.

**IMPORTANT**  
One installation SD card is required for each instrument that needs to be upgraded.

You can uninstall extension modules if required. When uninstalling an extension module, you have the option to free up the license so you can install the extension module on another instrument. This makes the extension module available to be transferred between units.

**IMPORTANT**  
When ever you re-run the OS Loader software, you will re-load only the main OS firmware. The OS loader will backup licence files and data, but not the optional extension modules. Once you have updated the OS firmware, install the latest version of your optional extension modules.

See the Dynamix 2500 Data Collector User Manual, [1441-UM001](#), for more information.

**Install Extension Modules**  
Follow these instructions to install an extension module.

1. Open the base cover at the bottom of the Dynamix 2500 data collector.

2. Place the extension module SD card contact side-up into the unit until it is firmly seated in place.

3. Close the base cover.
4. Apply power to the data collector.

5. From the Main Menu, select Setup Utility and press Enter.

6. Press 0 (Shift) to display the second set of functions.

```
<table>
<thead>

</tr>
</tbody>
</table>
```

The Extension Manager function remains on the screen for about three seconds after releasing 0 (Shift).

7. Press F1 (Extn Mgr).

The Extension Manager screen appears showing the current extension module installations.

```
<table>
<thead>

<td>3.07RC1</td>
</tr>
</tbody>
</table>
```

8. Press 0 (Shift) to display the Install Extension function.
9. Press F2 (Install) to install the new extension module.

When the installation is complete, a confirmation prompt appears.

The new extension module appears in the list.

11. Press F4 (Esc) to exit the Extension Manager screen.

Uninstall Extension Modules

Follow these instructions to uninstall an extension module.

1. Press 0 (Shift) from the Setup Utility screen to display the Extension Manager function.

The Extension Manager function remains on the screen for about three seconds after releasing 0 (Shift).
2. Press F1 (Extn Mgr).

The Extension Manager screen appears.

3. Select the extension module you want to uninstall and press F3 (Select).

F3 (Select) toggles the selection on and off.
A checkmark appears next to that extension module.

![Extension Manager screenshot]

4. Press F1 (Uninstall).

A confirmation message appears.

![Confirmation message]

5. Make sure your installation card is inserted into the instrument.

**IMPORTANT** The extension module is uninstalled and the license on the card is released so that the card can be used to install the extension module on another Dynamix 2500 data collector.

If the installation card is not inserted in the instrument and no card, you are is found or the card does not have the extension module license for the unit, you are prompted to insert the correct installation card or continue without freeing the license.

6. Press F2 (Yes) to uninstall the extension module.

7. Press F4 (Esc) to exit the Extension Manager screen.
Manage Extension Modules

The Dynamix 2500 data collector lets you to hide installed extension modules from the Main Menu. You may need to hide an advanced extension module icon from an inexperienced user, for example, RUCD and FRF.

**IMPORTANT** Once an extension module is hidden, its icon is not represented on the Main Menu or displayed in the Dynamix 2500 data collector About screen.

Follow these instructions to hide or show an extension module icon on the Main Menu.

1. Press 0 (Shift) on the Setup Utility screen to display the Extension Manager function.

   The Extension Manager function should remain on the screen for approximately three seconds after releasing 0 (Shift).

2. Press F1 (Extn Mgr). The Extension Manager screen appears.

   The Extension Manager displays a list of installed extensions module.

   ![Extension Manager Screen](image)

   The extension modules that are hidden are shown in [square brackets].

   The F2 (Hide) toggles between Hide and Show depending if the selected extension module is hidden or not.

   **TIP** You have to exit and re-enter the Extension Manager after hiding an extension module to have the Show function appear.
3. Select the extension module that you want to hide or show and press F2 (Show/Hide).

**TIP**
If you want to show or hide multiple extension modules simultaneously, select each extension module and press F3 (Select).
A checkbox appears next to each selected extension module. If you select multiple extension modules and some are hidden while others are shown, F2 (Show/Hide) reflects the status of the selected extension module.

4. Press F4 (Esc) to exit the Extension Manager.

**Extension Module Battery Status Indicators**

The battery status icons show the strength of the battery.

<table>
<thead>
<tr>

<td></td>
</tr>
<tr>
<td>![Battery Icon] Battery status is very low: &lt;10% life remaining.</td>
<td></td>
</tr>
<tr>
<td>![Battery Icon] Battery is charging.</td>
<td></td>
</tr>
</tbody>
</table>
Notes:
Time Recorder Extension Module

The Time Recorder extension module is an optional module for the Dynamix 2500 data collector. You install the extension module with the Time Recorder Secure Digital (SD) card.

See Installing Optional Extension Modules on page 7 for installation instructions.

<table>
<thead>
<tr>

</tbody>
</table>

The Time Recorder extension module lets the Dynamix 2500 data collector to be used as a data recorder for real-time data acquisition and analysis. With the Time Recorder module, you can record data from Channel X, Channel Y, or from an external tachometer. The data is stored in a format that can be easily imported into a software program for analysis.

Below are examples of how you can use the Time Recorder module:

- Analyze very low speed machines.
- Capture run up or coast-down data, intermittent events, and transient vibration signals from non-steady machines.
- Prevent further damage to a problem machine by recording the vibration signal for a short time. Then shut down the machine and play the recorded .wav file to analyze the measurement without the machine running.
- On a ship propulsion system, which uses large amounts of fuel, you can start the time recorder, run the ship up to full speed, run five minutes at full speed, and then coast-down. The measurement analysis is performed on the recorded vibration signal without spending hours of gas turbine drive time collecting data and resulting fuel consumption.

**IMPORTANT**

For optimized recording, use the Time Recorder application in conjunction with an Secure Digital (SD) storage card up to >16 GB. Saving data to the card greatly increases the amount of data you can record. The Windows CE Operating system has a 2 GB limitation file size.
Setting Up and Collecting Time Recorder Measurements

The Time Recorder extension module records a machine’s vibration signal (time waveform) as a Microsoft Windows .wav file. The signals from both inputs, Connector A, Connector B, and the external Tacho (POWER/USB/TRIGGER) can be digitally recorded and stored for playback at a later date. The recorded time waveform can be viewed on the data collector for onsite analysis or it can be copied from the instrument on to a computer for analysis.

Set Up Time Recorder Measurements

Follow these instructions to set up the time recorder measurements.

1. Connect the transducer to the Dynamix 2500 data collector.

2. Attach the transducer to the machine case or structure.

3. From the Main Menu, select Recorder and press Enter.
The Recorder screen appears.

- Setup displays the Time Recorder set-up parameters and begins data collection.
- Recall lets you recall previously saved Time Recorder Test settings to perform another Bump Test with the same settings.
- Review Data lets you review saved Time Recorder data.

4. Select Setup and press Enter.

The Recorder - Setup screen appears.

5. Select a parameter and press the Right arrow to open a list of choices.
6. Select a parameter value and press the Left arrow.

   Recorder - Setup
   ____________________
   | X | X Type: Accel (g) |
   | X | Sens1 (mV/g): 100.00 |
   | X | Range1 (g): 2 |
   | X | Freq Range: 1000.00 |
   | X | Save To: Internal |
   | X | Rec. Time (s): 0:00:00 |
   | X | Rec. Mode: Manual |
   | X | Trg. Level (g): NA |
   | X | Max Rec. Time = 02:23:26 |
   | X | Sample Freq. = 2.5kHz |

   Use up/down arrows to select menu item.
   Use right arrow key to change selection.
   Use left arrow or Fire key to store selection.

7. Press F3 (Save) to save the current settings to a file.

   See Save a Time Recorder Setup and Measurement on page 23.

   Use the descriptions in Table 2 to help you configure the Time Recorder parameters.

</tbody>
</table>
Preview the Measurement

You can preview the measurement before you record it to validate the parameter settings. In Preview mode, the screen continuously updates to display the channel's live time waveform signal and overall vibration reading.

Follow these steps to enter Preview mode.

1. From the Recorder Setup screen, press F3 (Start).

The Recorder - Taking Data screen appears.

![](image)

The message area is used to display error messages, such as a clipping error, or to prompt you to press a 1, 2, 3, or 4 to view the other time waveform channels.

2. If you need to adjust the set-up parameters, press F1 (Back) to return to the Setup screen.
Record the Measurement

Once you have previewed the measurement and you are satisfied with the parameter settings, you can record the measurement.

Follow these steps to review the measurement.

1. Press F2 (Rec.) on the Preview screen.

The Recorder - Taking Data screen appears.

During data recording, the live time waveform freezes on the screen, and the (recording) time remaining counts down in the message area. If any errors occur during the recording, an error message is displayed in the message area.

See Recorder Status Indicators on page 20 for more information.

2. If you need to pause the recording, press F2 (Pause) on the Recorder - Taking Data screen.

While paused, the instrument reverts back to Preview mode showing the live time waveform. The Pause function now becomes the Resume function.

3. Resume data recording by pressing F2 (Resume).

**TIP** The recorded time signal is not displayed continuously while the recording is paused.

When the recording ends, the Recorder - Save Data screen automatically appears, allowing you to save the recording to a file.

See Save a Time Recorder Setup and Measurement on page 23.
Save a Time Recorder Setup and Measurement

The time recorder set-up parameters and recorded time waveforms can be saved to a file that can then be recalled at a later time. The recorded time waveforms are stored in a .wav file format, and the last block of the recorded .wav file is saved in a comma separated value (.csv) file format.

You can review .csv time waveform files in the field with the data collector from the Recorder - Review Data screen. The time waveform .wav audio files can be imported into vibration analysis software.

You can save a time recorder set-up and measurement anytime the Save function is displayed on the screen.

**TIP**

The Recorder - Save Data screen automatically appears when the data collector has finished recording the measurement.

Follow these steps to save set-up and measurement data.

1. Press F3 (Save).

The appropriate Recorder - Save screen appears.

---

**IMPORTANT**

When data is saved to an SD memory card, only the .wav file is saved on the card. The .csv file is always saved to the internal memory in directory: /Mobile Device/Internal Disk/Analyser/Recorder.

---

Depending where you are in the process, the Save function either saves set-up parameters, or saves the set-up parameters and the recorded data.
Chapter 2  Time Recorder Extension Module

2. Do one of the following:
   - Save data to an existing file.
     a. Select the file, and press F3 (Save).
     b. Press F2 (Yes) to overwrite the existing file or press F3 (No) to return to the Save screen.
   - Save data to a new file.
     a. Select save reading as and press F3 (Save).
     b. Enter a file name by using the keypad or accept the default file name (current date timestamp).
     c. When the entry is complete, press F2 (OK).

3. When you are finished, press F4 (Cancel).

Recalling a Setup

You can recall a previously saved setup and use it to record another measurement. The setup may have been saved only as a setup, or may have been saved with the recorded measurement.

See Save a Time Recorder Setup and Measurement on page 23.

1. Connect the transducer to the data collector.

2. Attach the transducer to the machine case or structure.

3. From the Time Recorder Main Menu, select Recall and press Enter.

   The Recorder - Load Setup screen appears.

   4. Select the file you want to recall and press F3 (Open).
The Recorder - Setup screen appears.

![Recorder - Setup screen](image)

See **Set Up Time Recorder Measurements on page 16** for assistance in setting up the parameters.

5. To preview the measurement and start recording, press F3 (Start).
   - See **Preview the Measurement on page 21**.
   - See **Record the Measurement on page 22**.

**Reviewing Time Recorder Measurements**

You can review previously recorded measurements with the Dynamix 2500 data collector. Only a small portion from the end of the recorded data can be reviewed with the data collector. To review the entire data file, you must transfer the file to your computer.

See **Save a Time Recorder Setup and Measurement on page 23**.

To review recorded measurements with your instrument, follow these steps.

1. From the Time Recorder Main Menu, select Recorder and press Enter.
The Recorder screen appears.

![Recorder - Review Data](image)

2. Select the filename that you want review and press F3 (Open).

The measurement appears.

![Recorder - Review Data](image)

- Press F1 (Print) to print the screen.
- Press F2 (Prev) to review the previous saved file.
- Press F3 (Next) to review the next saved file.
- Press F4 (Back) to return to the Recorder - Review Data screen.
Capture the Review Data Screen

The Review Data screen can be saved as a bitmap (.bmp) image to internal memory or an SD storage card.

1. Press 0 (Shift) and 7.

The Print popup screen appears.

2. Press F2 (Card) to create and save the .bmp file to an SD card.

3. Press F3 (Internal) to save the .bmp file on the instrument.
Back Up Time Recorder Files

You can back up files either from the Review Data screen or the Recall Data screen.

Follow these steps to back up your files.

1. From the Time Recorder Main Menu, select Review Data or Recall Data and press Enter.

   The appropriate Recorder screen appears.

2. Select a file or select -all- (to backup all the files).

3. Press 0 (Shift) to display a second set of functions.

4. Press F1 (Backup).

   The specified files are automatically copied to the \Storage Card\Analyser\Recorder directory on the SD storage card that is in the data collector.
Delete a Time Recorder Measurement and Setup

Follow these steps to delete a time recorder and setup.

1. Select Recorder on the Main Menu and press Enter.

   The Recorder screen appears.

2. Select Review Data to delete a measurement or Recall Data to delete a setup and press Enter.

   The Recorder screen appears.

3. Select the appropriate filename or select all to delete all the files.

4. Press 0 (Shift) to display another set of functions.
5. Press F4 (Delete) to delete the selected file from the data collector.

6. Press F2 (Yes) to delete.

**Save Files to Your Computer**

You can save files to your computer by using the ActiveSync connection.

Follow these instruction to back up your data to your computer by using the ActiveSync software.

1. Connect the instrument with the USB cable to you computer.

   ActiveSync automatically senses the connection and displays the Connected – Synchronized message.

   ![ActiveSync Connection](image)

   See the Dynamix 2500 Data Collector User Manual, publication **1441-UM001**, for information about ActiveSync communication.
2. Click Explore.

The contents of the data collector (mobile device) appears.

3. From the Windows Explorer window, copy the stored measurement files (.csv files) from the data collector’s Internal Disk/Analyzer folder to a folder on your computer.

Rockwell Automation Support

Rockwell Automation provides technical information on the Web to assist you in using its products. At [http://www.rockwellautomation.com/support/](http://www.rockwellautomation.com/support/), you can find technical manuals, a knowledge base of FAQs, technical and application notes, sample code and links to software service packs, and a MySupport feature that you can customize to make the best use of these tools.

For an additional level of technical phone support for installation, configuration, and troubleshooting, we offer TechConnect support programs. For more information, contact your local distributor or Rockwell Automation representative, or visit [http://www.rockwellautomation.com/support/](http://www.rockwellautomation.com/support/).

Installation Assistance

If you experience a problem within the first 24 hours of installation, review the information that is contained in this manual. You can contact Customer Support for initial help in getting your product up and running.

New Product Satisfaction Return

Rockwell Automation tests all of its products to ensure that they are fully operational when shipped from the manufacturing facility. However, if your product is not functioning and needs to be returned, follow these procedures.

<table>
<thead>
<tr>
<th>United States</th>
<th>Contact your distributor. You must provide a Customer Support case number (call the phone number above to obtain one) to your distributor to complete the return process.</th>
</tr>
