PanelView Plus 7 Standard Terminals

Important User Information

Read this document and the documents listed in the additional resources section about installation, configuration, and operation of this equipment before you install, configure, operate, or maintain this product. Users are required to familiarize themselves with installation and wiring instructions in addition to requirements of all applicable codes, laws, and standards.

Activities including installation, adjustments, putting into service, use, assembly, disassembly, and maintenance are required to be carried out by suitably trained personnel in accordance with applicable code of practice.

If this equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

In no event will Rockwell Automation, Inc. be responsible or liable for indirect or consequential damages resulting from the use or application of this equipment.

The examples and diagrams in this manual are included solely for illustrative purposes. Because of the many variables and requirements associated with any particular installation, Rockwell Automation, Inc. cannot assume responsibility or liability for actual use based on the examples and diagrams.

No patent liability is assumed by Rockwell Automation, Inc. with respect to use of information, circuits, equipment, or software described in this manual.

Reproduction of the contents of this manual, in whole or in part, without written permission of Rockwell Automation, Inc., is prohibited.

Throughout this manual, when necessary, we use notes to make you aware of safety considerations.

| WARNING: | Identifies information about practices or circumstances that can cause an explosion in a hazardous environment, which may lead to personal injury or death, property damage, or economic loss. |
| ATTENTION: | Identifies information about practices or circumstances that can lead to personal injury or death, property damage, or economic loss. Attentions help you identify a hazard, avoid a hazard, and recognize the consequence. |
| IMPORTANT | Identifies information that is critical for successful application and understanding of the product. |

Labels may also be on or inside the equipment to provide specific precautions.

| SHOCK HAZARD: | Labels may be on or inside the equipment, for example, a drive or motor, to alert people that dangerous voltage may be present. |
| BURN HAZARD: | Labels may be on or inside the equipment, for example, a drive or motor, to alert people that surfaces may reach dangerous temperatures. |
| ARC FLASH HAZARD: | Labels may be on or inside the equipment, for example, a motor control center, to alert people to potential Arc Flash. Arc Flash will cause severe injury or death. Wear proper Personal Protective Equipment (PPE). Follow ALL Regulatory requirements for safe work practices and for Personal Protective Equipment (PPE). |

Preface

This manual describes how to install, configure, operate, and troubleshoot the PanelView™ Plus 7 Standard terminals. It does not provide procedures on how to create applications that run on the terminals or ladder logic that runs in the controller.

Other tasks to perform include:

- Create a human machine interface (HMI) application for the terminal by using FactoryTalk® View Machine Edition (ME) software, version 7.0 or later.
- Create ladder logic for the controller by using the Studio 5000 Logix Designer® application.

Summary of Changes

This manual contains new and updated information as indicated in the following table.

<table>
<thead>
<tr>
<th>Topic</th>
<th>Pages</th>
</tr>
</thead>
<tbody>
<tr>
<td>Updated the screen and alarm counts for the PanelView Plus 7 Standard terminals.</td>
<td>11, 14</td>
</tr>
<tr>
<td>Updated the ATEX, IECEx, and INMETRO information in the Certifications table.</td>
<td>19, 21…23</td>
</tr>
<tr>
<td>Added catalog numbers for the new SDHC cards.</td>
<td>17</td>
</tr>
<tr>
<td>Added instructions on how to apply the static discharge warning label.</td>
<td>34</td>
</tr>
</tbody>
</table>

Package Contents

This product is shipped with the following items:

- PanelView Plus 7 Standard terminal with FactoryTalk View ME Station runtime software installed and activated
- Mounting levers for panel installation
- Removable power terminal block
- Secure Digital (SD) card cover
- Product information
- Cutout template
- China RoHS information
- Product Feature Notice
Product Release Notes

Product release notes are available online within the Product Compatibility and Download Center.

1. From the Quick Links list on http://www.ab.com, choose Product Compatibility and Download Center.

2. From the Compatibility Scenarios tab or the Get Downloads tab, search for and choose your product.

3. Click the download icon to access product release notes.
Additional Resources

These documents contain additional information concerning related products from Rockwell Automation.

Overview

The PanelView™ Plus 7 Standard terminals are operator interface devices. They monitor and control devices that are attached to ControlLogix® 5570 and CompactLogix™ 5370 controllers on an EtherNet/IP™ network. Animated graphic and text displays provide operators a view into the operating state of a machine or process. Operators interact with the control system by using touch screen input.

The PanelView Plus 7 Standard terminals include these features:

- Terminal functionality permits connection to 1 controller, up to 100 screens, and up to 500 alarms.
- FactoryTalk® View Machine Edition software provides a familiar environment for creating HMI applications.
- Windows CE operating system with desktop access for configuration and third-party applications.
- Ethernet communication that supports Device Level Ring (DLR), linear, and star network topology.
- PDF viewer to access PDF files that are stored on the terminal.
Chapter 1  Overview

- Widescreen on three sizes, 4-in., 9-in., and 12-in. terminals.
- Greater screen resolution.
- Terminals are available with Allen-Bradley® branding, or with no branding for customers that want to put their own branding around the terminal.
- Certifications including Class I, Div. 2; Class II, Div. 2; Class III; ATEX, IECEx, and INMETRO Zones 2 and 22.

Hardware Features

The PanelView Plus 7 Standard terminal features fixed-hardware configurations in a range of display sizes with touch screen input.

Throughout this user manual, illustrations show the terminals with dual Ethernet ports.

</tr>
</tbody>
</table>
### Operator Control

All terminals have a color display with a touch screen for operator control. The resistive touch screen provides accurate, reliable, and durable touch control for industrial applications.

#### ATTENTION

The touch screen accepts input from a finger, stylus, or gloved hand for operation in dry or wet environments. The plastic stylus must have a minimum tip radius of 1.3 mm (0.051 in.). Any other object or tool can damage the touch screen. Do not conduct multiple operations simultaneously; it can result in unintended operation. Touch only one operating element on the touch screen with one finger, at one time.

#### TIP

At runtime, a virtual keyboard or numeric keypad opens on terminal screens for data entry.

The touch screen supports touch gestures to interact with screen elements during runtime. Use only these touch gestures on the touch screen:

- **Tap** – Briefly touch the target on the terminal screen with your fingertip.
- **Double-tap** – Touch the target on the terminal screen twice quickly with your fingertip.
- **Drag** – Touch the target on the terminal screen and move your fingertip across the screen.
- **Long press** – Touch and hold the target on the terminal screen for several seconds.

For a list of actions you can perform by using touch gestures, refer to the FactoryTalk View ME help.

### Software Support

#### IMPORTANT

It is the responsibility of the customer to be sure that any third-party software, updates, patches, or firmware that is installed is free of malicious bugs, spyware, and so on.

---

**Table 1 - Hardware Features**

<table>
<thead>
<tr>
<th>Item</th>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
</table>
| 7    | SD card slot and protective cover           | • One SD card slot supports catalog number 1784-SDx hot-swappable SD cards for external storage.  
|      |                                              | • IMPORTANT: ATEX and INMETRO installations:  
|      |                                              | — Protective cover secures the SD card in the slot, and is required for ATEX, INMETRO, and hazardous location installations.  
|      |                                              | — See Insert an SD Card on page 123 for hot-swapping, ATEX, INMETRO, and hazardous location warnings. |
| 8    | Battery                                     | Battery cover provides access to the lithium battery for replacement.        |
| 9    | Status indicators                           | Status indicators on the back of the terminal provide status and fault conditions. |
PanelView Plus 7 Standard Applications

PanelView Plus 7 Standard Machine Edition applications are restricted to these applications:

- Maximum of 100 screens.
- Maximum of 500 alarm messages.
- One connection or shortcut to a controller by using either RSLinx® Enterprise or KEPServer Enterprise software.
- Only Ethernet communication is supported.

If RSLinx Enterprise software is used, then Ethernet drivers are supported.

Windows CE Operating System

The terminals run the Windows CE operating system. These devices run HMI applications and offer a desktop with these capabilities:

- File transfer protocol (FTP) server
- Virtual network computing (VNC) client and server
- ActiveX controls – Refer to View FactoryTalk View ME Station Information on page 74 to view a list of ActiveX controls installed on terminal.

TIP For a complete list of ActiveX controls, go to http://www.rockwellautomation.com/knowledgebase and search the Knowledgebase for keywords ‘ActiveX Support for PanelView Plus Terminals’.

- PDF reader
- Third-party device support

Open Versus Closed System

You can configure a terminal to run an open or closed desktop environment:

- An open system launches the Windows desktop on startup.
- A closed system launches a FactoryTalk View ME application or FactoryTalk View ME Station on startup. Desktop access is restricted.

All terminals are shipped as closed systems.

Table 2 - PanelView Plus 7 Standard Software Support

<table>
<thead>
<tr>
<th>Software</th>
<th>Description</th>
<th>Version</th>
</tr>
</thead>
</table>
| FactoryTalk View ME Station | Runtime environment of terminal:  
  • Runs FactoryTalk View ME applications.  
  • Provides options to view and configure terminal settings.  
  Machine Edition Station is preloaded on each terminal and does not require activation. | 7.0 or later |
| FactoryTalk View Studio for Machine Edition | Software for developing the HMI applications that run on terminal. This software does not run on the terminal. The HMI applications that are created in this software are loaded onto the terminal. | 7.0 or later |
| FactoryTalk ViewPoint      | A web server application that lets remote users access and control the HMI application that runs on a terminal by using an internet browser.  
  A license is embedded with each terminal that supports a client connection to a terminal. | 1.2 or later |

TIP For a complete list of ActiveX controls, go to http://www.rockwellautomation.com/knowledgebase and search the Knowledgebase for keywords ‘ActiveX Support for PanelView Plus Terminals’.
**Desktop Access**

You can allow or restrict access to the Windows desktop on the terminal. From the desktop, you can perform system and control panel operations or run third-party applications. You can even allow access temporarily to perform specific tasks, then disable desktop access to prevent unauthorized changes.

**TIP** All terminals are shipped with desktop access disabled.

Refer to Desktop Access on page 48 for details on how to modify desktop access.

**Start-up Options**

The terminal can perform one of three actions at startup:

- Launch a FactoryTalk View ME HMI application.
- Launch FactoryTalk View ME Station in Configuration mode. This mode lets you configure terminal settings and start-up options, load applications to run, and enable or disable desktop access.
- Launch the Windows desktop.

The factory default state and start-up option after a firmware update is to launch the terminal in Configuration mode. Refer to Configure Start-up Options on page 53 for details on how to change the start-up option.

**EtherNet/IP Communication**

PanelView Plus 7 Standard terminals communicate with ControlLogix 5570 and CompactLogix 5370 controllers over an EtherNet/IP connection.

**Typical Configuration**

Traditional DLR, linear, and star network topologies are supported. See these topics for examples:

- Device Level Ring Network Topology on page 38
- Linear Network Topology on page 39
- Star Network Topology on page 40
**Catalog Number Explanation**  See the table for an explanation of the terminal catalog number.

Install the PanelView Plus 7 Standard Terminal

The equipment meets the requirements of the standards and ratings that are listed in Table 10.

### ATTENTION:
Do not use a PanelView™ Plus 7 Standard terminal for emergency stops or other controls critical to the safety of personnel or equipment. Use separate hard-wired operator interface devices that do not depend on solid-state electronics.

The equipment meets the requirements of the standards and ratings that are listed in Table 10.

Tamb = 0 °C…+55 °C (32 °F…131 °F)
ATTENTION: Environment and Enclosure

This equipment is intended for use in a Pollution Degree 2 industrial environment, in overvoltage Category II applications (as defined in IEC 60664-1), at altitudes up to 2000 m (6561 ft) without derating.

The terminals are intended for use with programmable logic controllers.

This equipment is considered Group 1, Class A industrial equipment according to IEC CISPR 11. Without appropriate precautions, there may be difficulties with electromagnetic compatibility in residential and other environments due to conducted or radiated disturbances.

Korean Radio Wave Suitability Registration - When so marked this equipment is registered for Electromagnetic Conformity Registration as business equipment (A), not home equipment. Sellers or users are required to take caution in this regard.

이 기기는 업무용 (A 급 ) 전자파적합기기로서 판매자 또는 사용자는 이 점을 주의하시기 바랍니다 , 가정외의 지역에서 사용하는 것을 목적으로 합니다.

This equipment is supplied as open-type equipment. It must be mounted within an enclosure that is suitably designed for those specific environmental conditions that will be present and appropriately designed to prevent personal injury resulting from accessibility to live parts. The interior of the enclosure must be accessible only by the use of a tool. The terminals meet specified NEMA, UL Type, and IEC ratings only when mounted in a panel or enclosure with the equivalent rating. Subsequent sections of this publication may contain additional information regarding specific enclosure type ratings that are required to comply with certain product safety certifications.

In addition to this publication, see the following:

- Industrial Automation Wiring and Grounding Guidelines, publication 1770-4.1, for additional installation requirements
- NEMA 250 and IEC 60529, as applicable, for explanations of the degrees of protection provided by different types of enclosure

ATTENTION: Wiring and Safety Guidelines

Use publication NFPA 70E, Electrical Safety Requirements for Employee Workplaces, IEC 60364 Electrical Installations in Buildings, or other applicable wiring safety requirements for the country of installation when wiring the devices. In addition to the NFPA guidelines, here are some other guidelines to follow:

- Employ only qualified electricians to wire the device in accordance with local, state, and national codes.
- Connect the device and other similar electronic equipment to its own branch circuit.
- Protect the input power by a fuse or circuit breaker rated at no more than 15 A.
- Route incoming power to the device by a separate path from the communication lines.
- Cross power and communication lines at right angles if they must cross.
- Communication lines can be installed in the same conduit as low-level DC I/O lines (less than 10V).
- Shield and ground cables appropriately to avoid electromagnetic interference (EMI). Grounding minimizes noise from EMI and is a safety measure in electrical installations.

For more information on grounding recommendations, refer to the National Electrical Code published by the National Fire Protection Association.
**Hazardous Locations**

The following information applies when operating this equipment in hazardous locations.

When marked, these products are suitable for use in Class I, Division 2, Groups A, B, C and D; Class II, Division 2, Groups F and G; Class III hazardous locations and nonhazardous locations only. Each product is supplied with markings on the rating nameplate indicating the hazardous location temperature code. When combining products within a system, the most adverse temperature code (lowest “T” number) can be used to help determine the overall temperature code of the system. Combinations of equipment in your system are subject to investigation by the local authority having jurisdiction at the time of installation.

---

**WARNING: EXPLOSION HAZARD**

The following information applies when operating this equipment in hazardous locations.

This equipment is suitable for use in Class I, Division 2, Groups A, B, C and D; Class II, Division 2, Groups F and G; Class III hazardous locations and nonhazardous locations only.

- Do not disconnect equipment unless power has been removed or the area is known to be nonhazardous.
- Do not disconnect connections to this equipment unless power has been removed or the area is known to be nonhazardous. Secure any external connections that mate to this equipment by using screws sliding latches, threaded connectors, or other means provided with this product.
- When installed in a hazardous location, do not open the enclosure, connect or disconnect equipment unless the area is known to be non-hazardous.
- Substitution of components can impair suitability for Class I, Division 2.
- Peripheral equipment must be suitable for the location where it is used.
- All wiring must be in accordance with Class I, Division 2, Class II, Division 2, or Class III wiring methods of Articles 501, 502 or 503, as appropriate, of the National Electrical Code and/or in accordance with Section 18-1J2 of the Canadian Electrical Code, and in accordance with the authority having jurisdiction.
- When used in Class II and Class III hazardous locations these products must be installed in a dust tight enclosure in accordance with Articles 502 and 503 of the National Electrical Code.
- For IECEx, ATEX, and INMETRO Zone 2 applications, transient protection shall be provided that is set at a level not exceeding 140% of the peak rated voltage value at the supply terminals to the equipment.
- For IECEx, ATEX, and INMETRO applications, mount the display in environments not subject to UV light exposure.
- USB device port is for maintenance use only, it is not to be used during normal operation of the device.
- Install the display in the cutout of an enclosure by using the provided clamps to compress the bezel gasket to form a seal against the panel. The gasket seal is permanent for the installation.
- Use field/power wiring that is rated to a minimum of 90 °C (194 °F).
- Install the display in a location that minimizes the risk of impact from other objects. Do not drop, jolt, or impact the display during installation.
- Mount the display through an enclosure wall with a minimum ingress protection rating of IP54 (Zone 2 applications) and IP6X (Zone 22 applications), and in an overall environment not exceeding Pollution Degree 2 as defined in IEC 60664-1. The enclosure must meet Zone 2 and/or Zone 22 ATEX/IECEx requirements depending on area of installation.
Informations sur l'utilisation de cet équipement en environnements dangereux:

Les produits marqués "CL I, DIV 2, GP A, B, C, D" ne conviennent qu'à une utilisation en environnements de Classe I, Division 2, Groupes A, B, C et D ; Classe II, Division 2, Groupes F et G ; Classe III dangereux et non dangereux. Chaque produit est livré avec des marquages sur sa plaque d'identification qui indiquent le code de température pour les environnements dangereux. Lorsque plusieurs produits sont combinés dans un système, le code de température le plus défavorable (code de température le plus faible) peut être utilisé pour déterminer le code de température global du système. Les combinaisons d'équipements dans le système sont sujettes à inspection par les autorités locales qualifiées au moment de l'installation.

**AVERTISSEMENT : RISQUE D’EXPLOSION**

Les informations suivantes s’appliquent lorsque cet équipement fonctionne dans des zones dangereuses.

Cet équipement est utilisable uniquement en Classe I, Division 2, Groupes A, B, C et D ; Classe II, Division 2, Groupes F et G ; Classe III dangereux et non dangereux.

- Couper le courant ou s’assurer que la zone est classée non dangereuse avant de débrancher l’équipement.
- Couper le courant ou s’assurer que la zone est classée non dangereuse avant de débrancher les connexions de l’équipement.
- Fixer tous les connecteurs externes reliés à cet équipement à l’aide de vis, loquets coulissants, connecteurs filetés ou autres moyens fournis avec ce produit.
- Lorsqu’il est installé dans une zone dangereuse, n’ouvrer pas le boîtier, ne connectez ou déconnectez pas l’équipement à moins que la zone ne soit connue pour être non dangereuse.
- La substitution de composants peut rendre cet équipement impropre à une utilisation en Classe I, Division 2.
- Les équipements périphériques doivent convenir à l’environnement dans lequel ils sont utilisés.
- Tous les systèmes de câblage doivent être de Classe I, Division 2, Classe II, Division 2, ou Classe III conformément aux méthodes de câblage indiquées dans les Articles 501, 502 ou 503 du Code Electrique National (National Electrical Code) et/ou conformément à la Section 18-1J2 du Canadian Electrical Code (Code Electrique Canadien), et en fonction de l’autorité de juridiction.
- Pour les applications en Zone 2 IECEx, ATEX et INMETRO, une protection contre les transitoires sera fournie pour limiter les surtensions transitoires à 140 % de la tension de crête assignée au niveau des bornes d’alimentation de l’équipement.
- Pour les applications IECEx, ATEX et INMETRO, installer l’afficheur dans des environnements non exposés aux rayonnements ultraviolets.
- Le port pour dispositif USB est destiné à la maintenance uniquement, il ne doit pas être utilisé pendant le fonctionnement normal du dispositif.
- Installer l’afficheur dans la découpe d’une enceinte en utilisant les fixations fournies pour comprimer le joint de l’encadrement et assurer l’étanchéité avec la paroi. L’étanchéité du joint doit être permanente pour l’installation.
- Utiliser un câblage de terrain/d’alimentation normalisé pour une température minimum de 90 °C (194 °F).
- Installer l’afficheur dans un emplacement qui minimise le risque de choc par d’autres objets. Pendant l’installation, l’afficheur ne doit pas tomber, subir des secousses ou des chocs.
- Monter l’écran dans la paroi d’un boîtier ayant un indice de protection minimum IP54 (applications de la zone 2) et IP6X (applications de la zone 22), et dans un environnement global ne dépassant pas le degré de pollution 2, tel que défini dans la norme IEC 60664-1. Le boîtier doit répondre aux exigences de la zone 2 et/ou de la zone 22 ATEX/ IECEx, selon la zone d’installation.
As informações a seguir aplicam-se ao operar este equipamento em áreas classificadas.

Os produtos marcados com “CL I, DIV 2, GP A, B, C, D” são adequados somente para utilização em áreas classificadas de Classe I, Divisão 2, Grupos A, B, C e D e em áreas não classificadas. Cada produto é fornecido com marcas na placa de identificação de classificação que indicam o código de temperatura da área classificada. Ao combinar produtos em um sistema, o código de temperatura mais adverso (número “T” mais baixo) pode ser usado para ajudar a determinar o código de temperatura geral do sistema. As combinações de equipamentos em seu sistema estão sujeitas à fiscalização das autoridades locais com jurisdição no momento da instalação.

**ATENÇÃO: Risco de explosão**

As informações a seguir aplicam-se ao operar este equipamento em áreas classificadas.

Este equipamento é adequado para utilização em áreas classificadas de Classe I, Divisão 2, Grupos A, B, C e D; Classe II, Divisão 2, Grupos F e G; e Classe III, bem como em áreas não classificadas.

- Não desconecte o equipamento, a não ser que a alimentação tenha sido removida ou a área seja conhecida como não classificada.
- Não desligue as conexões deste equipamento, a não ser que a alimentação tenha sido removida ou a área seja conhecida como não classificada. Proteja quaisquer conexões externas a este equipamento utilizando as travas deslizantes, os conectores com rosca ou outros meios fornecidos com este produto.
- Não abra o invólucro quando instalado em área classificada. Não conecte ou desconecte o equipamento a menos que a área seja conhecida como área não-classificada.
- A substituição dos componentes pode prejudicar a adequação para a Classe I, Divisão 2.
- Os equipamentos periféricos devem ser adequados para o local onde são utilizados.
- Toda a fiação deve estar em conformidade com os métodos de fiação de Classe I, Divisão 2, Classe II, Divisão 2 ou Classe III do artigo 501, 502 ou 503 do Código Elétrico Nacional e/ou em conformidade com a Seção 18-1J2 do Código Elétrico Canadense e em conformidade com a autoridade que tiver jurisdição.
- Quando usados nas áreas classificadas de Classe II e Classe III, esses produtos devem ser instalados em um compartimento estanque ao pó, de acordo com os artigos 502 e 503 do Código Elétrico Nacional.
- Para aplicações em zona 2 IECEx, ATEX e INMETRO, deverá ser fornecida limitação transiente na aplicação que limitar as sobretensões transientes a não mais do que 140% acima da tensão aplicada.
- Para aplicações IECEx, ATEX e INMETRO, instale a tela em ambientes onde a luz ultravioleta (UV) não possa influenciar as partes não metálicas.
- A porta para dispositivo USB destina-se apenas para manutenção e não deve ser utilizada durante a operação normal do dispositivo.
- Instale a tela no recorte de um gabinete utilizando os grampos fornecidos para comprimir a junta da moldura e formar uma vedação contra o painel. A junta de vedação é permanente para a instalação.
- Utilize fiação de campo/alimentação que seja classificada para um mínimo de 90 °C (194 °F).
- Instale a tela em um local que minimize o risco de impacto de outros objetos. Não derrube, bata ou cause impacto na tela durante a instalação.
- O display deve ser montado em um invólucro com grau de proteção mínimo IP54 quando instalado em áreas que requerem EPL Gc (Zona 2), e IP6X para EPL Dc (Zona 22). O ambiente da instalação não pode exceder Grau de Poluição 2 conforme definido pela IEC 60664-1. O invólucro deve ser devidamente certificado e atender aos requisitos para EPL Gc (Zona 2) e / ou EPL Dc (Zona 22), dependendo da instalação.

The terminals have a temperature code of T4 when operating in a 55 °C (131 °F) maximum ambient temperature. Do not install product in environments where atmospheric gases have ignition temperatures less than 135 °C (275 °F).
Considerations for Mounting

Consider the following items when mounting the terminal:

- Typically, the terminal mounts on the vertical surface of a panel or enclosure, at a 0° angle, just below eye level.
- Mount the terminal at a height suitable for most operators.
- Mount the terminal in an area that has good lighting.
- Do not mount the terminal where it is exposed to direct sunlight.

Clearances for Mounting

Plan for adequate space around the terminal and inside the enclosure for ventilation and cables. Consider the heat produced by other devices in the enclosure. The ambient temperature around the terminal must be 0…55 °C (32…131 °F).

Table 11 - Minimum Required Clearances

Panel Guidelines

Mount the terminals in the door or wall of a NEMA, UL Type, or IP rated enclosure:

- The enclosure must be of type IP20 or greater protection.
- Panels must have a minimum thickness of 1.5…4.8 mm (0.060…0.188 in.).
- The material strength and stiffness of the panel must be sufficient to hold the terminal and maintain an appropriate seal against water and dust.
- The panel surface must be flat and free of imperfections to maintain an adequate seal, and NEMA, UL Type, and IP ratings.
Use the template that is shipped with your terminal to mark the cutout dimensions.

Prepare for Panel Mounting

Before mounting a terminal in a panel, read this section and the entire installation procedure on page 30.

**IMPORTANT** Use catalog number 2711P-RMCS mounting levers (gray) for PanelView Plus 7 Standard terminals. Do not use these mounting levers with any other PanelView Plus terminals. Do not use black mounting levers; they are not compatible with PanelView Plus 7 Standard terminals.

Mounting levers insert into the slots around the bezel to secure the terminal in the panel. The number of mounting levers varies by terminal size.

![Mounting Levers](image)

Each slot has six notches with alignment marks that are locking positions for a mounting lever. The thickness of the panel that you mount the terminal in determines the locking position that is required to maintain a NEMA, UL Type, and IP seal.

**Table 13 - Mounting Lever Locking Positions**

</tr>
</tbody>
</table>

Always orient a mounting lever vertically before inserting it into a slot. This method is the only way to slide the mounting lever knob within the slot for positioning. After sliding the mounting lever to a specific notch, rotate the mounting lever toward the panel to lock it in position. The flat side of the mounting lever must come into contact with the panel.
Initially, you secure the terminal in the panel by sliding each mounting lever to a position that is one or two notches greater than the final lock position. For example, if the final lock position is 1, slide each mounting lever to position 2 or 3. Follow the sequence specific to the terminal size shown in Figure 2 on page 29.

**TIP** If the lock position is 6, slide the mounting lever to the large end of the slot or insertion hole.

Figure 1 on page 28 shows the mounting lever orientation and locking sequence for a 5.7-in. and 10.4-in. terminal. See Figure 2 on page 29 for locking sequence and mounting lever orientations for all terminals.
Chapter 2  Install the PanelView Plus 7 Standard Terminal

Figure 1 - Mounting Levers Shown in Locked Position

All mounting levers are locked in position 1. This is appropriate for a panel thickness of 1.50…2.01 mm (0.060…0.079 in.).

The notch shows the locked position.

All mounting levers are locked in position 1. This is appropriate for a panel thickness of 1.50…2.01 mm (0.060…0.079 in.).
The box indicates that the levers must be rotated in the orientation that is shown to avoid interference with ports and cables.

**IMPORTANT**: The mounting lever orientations that are shown are required to maintain NEMA, UL Type, and IP seals. If you require a NEMA, UL Type, or IP seal, do not use a mounting lever in another orientation than shown.
Mount the Terminal in a Panel

The terminals were designed for single-person installation. No tools are required to mount the terminal. Some tools are required to make the panel cutout.

Follows these steps to mount the terminal in a panel.

**ATTENTION:**

Disconnect all electrical power from the panel before making the panel cutout.

Make sure that the area around the panel cutout is clear and that the panel is clean of any debris, oil, or other chemicals.

Make sure that metal cuttings do not enter any components that are already installed in the panel and that the edges of the cutout have no burrs or sharp edges.

Failure to follow these warnings can result in personal injury or damage to panel components.

1. Use the cutout dimensions on page 25 to cut an opening in the panel.
2. Verify that the sealing gasket is present on the terminal.

   This gasket forms a compression-type seal. Do not use sealing compounds.

![Gasket](image)

3. Center the terminal in the panel cutout.

![Centered Terminal](image)

4. See Table 13 on page 26 to get the final lock position of the mounting levers for the panel thickness.

5. See Figure 2 on page 29 to determine the mounting lever orientations and lock sequence for your terminal size.
6. Secure the terminal in the panel.

   **TIP** The mounting levers for PanelView Plus 7 Standard terminals are gray, similar to the color of the bezel (catalog number 2711P-RMCS). Do not use black mounting levers; they are not compatible with PanelView Plus 7 Standard terminals.

   a. Verify the orientation of the mounting lever.

      The direction that you rotate each mounting lever is different for each terminal size.

         ![Mounting Lever Orientation Diagram]

   b. Hold the first mounting lever in the locking sequence vertical to the slot and insert its knob into the large end of the slot.

         ![Mounting Lever Insertion Diagram]

   c. Slide the mounting lever to a notch that is one or two positions greater than the final locking position for your panel thickness.

      If the final locking position is 1, slide the mounting lever to position 2 or 3.

         ![Mounting Lever Position Diagram]

   **TIP** To mark the alignment marks for visibility of the slot positions and to mark the final lock position, use an erasable marker or grease pencil.
d. Rotate the mounting lever until its flat side comes in contact with the panel.

**IMPORTANT** Do not use tools or excessive force to rotate the mounting lever. The mounting levers are rotated and secured by hand.

**TIP** A broken mounting lever does not damage the terminal. If a mounting lever is over torqued, the lever is designed to break off the pin. This breakage helps to prevent damage to the terminal bezel. If a pin is broken, turn the mounting lever over and use the other pin to continue the installation. See Figure 2 on page 29 for details and restrictions.

e. Repeat steps a through d for the remaining mounting levers.

7. Adjust each mounting lever to its final position by using the same locking sequence in Figure 2 on page 29.

a. Unlock mounting lever one in the sequence by rotating it away from the bezel.

b. With the mounting lever positioned vertically to the slot, slide the mounting lever to the final locking position in Table 13 on page 26.

c. Carefully rotate the mounting lever back toward panel.

d. Repeat steps a through c to lock the remaining mounting levers in their final position.
8. To make sure each is in the correct locked position, inspect all mounting levers.

**ATTENTION:** All mounting levers must be in the correct locked position and follow the correct lever installation sequence to provide an adequate gasket seal between the terminal and the panel. Rockwell Automation assumes no responsibility for water or chemical damage to the terminal or other equipment within the enclosure because of improper installation.

The notch on the outside of mounting lever shows its locked position. This view shows that the mounting levers are locked in position 1.
Apply the Static Discharge Warning Label

**IMPORTANT**  Rockwell Automation recommends applying the static discharge warning label for all hazardous location applications according to the instructions below. If the intended application requires ATEX or IECEx certification, the static discharge warning label MUST be applied according to the instructions below.

A static discharge warning label is included in the box with the PanelView Plus 7 Standard terminal. If required for your installation, this label must be affixed to the panel in a location that is visible to the operator.

Follow these steps to apply the static discharge warning label.

1. Identify a location for the static discharge warning label that is visible to the operator during operation.
2. Clean the desired install location with isopropyl alcohol.
3. Remove the backing from the static discharge warning label and apply the label to the desired location.
4. Verify that operator visibility to the static discharge warning label is not obstructed at any time during operation.
**Remove and Replace Power Terminal Block**

The product has a three-pin terminal block for power connections. You can remove the terminal block for ease of installation, wiring, and maintenance.

---

**WARNING: Explosion Hazard**

If you connect or disconnect wiring while the power is on, an electric arc can occur. This arc can cause an explosion in hazardous location installations. Make sure that the power is off and the area is nonhazardous before proceeding. Failure to turn power off can result in electrical shock or damage to the terminal.

---

Use a 0.6 x 3.5-mm flat blade screwdriver for terminal block wiring.

**Table 14 - Wire Specifications for Power Input Terminal Block**

<table>
<thead>
<tr>
<th>Wire Type</th>
<th>Dual-wire Size (1)</th>
<th>Single-wire Size</th>
<th>Strip Length</th>
<th>Screw Torque</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stranded or solid</td>
<td>0.3...1.3 mm²</td>
<td>0.3...2.1 mm²</td>
<td>7 mm (0.28 in.)</td>
<td>0.56 N•m (5.0 lb•in)</td>
</tr>
<tr>
<td>Cu 90 °C (194 °F)</td>
<td>22...16 AWG</td>
<td>(22...14 AWG)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

(1) Two-wire maximum per terminal.

---

To remove the power terminal block, follow these steps.

1. Loosen the two screws that secure the terminal block.

2. Gently pull the terminal block away from the connector.

To install the power terminal block, follow these steps.

1. Press the terminal block onto the connector until seated.

---

**ATTENTION:** Do not use excessive force to press the DC terminal block into position. The DC terminal block is keyed to fit the DC connector. If the terminal block does not fit into the connector, verify that you have the correct DC terminal block. See Table 5 on page 17.

2. Tighten the two screws that secure the terminal block to the connector.
Connect Power

The terminals have a 24-V DC non-isolated power supply at these power ratings:

- 24V DC nominal (18…30V DC)
- 35 W maximum (1.46A at 24V DC)

**ATTENTION:** The power supply is internally protected against reverse polarity. Connecting DC+ or DC- to the earth ground terminal can damage the terminal. Connecting AC power, or more than 30V DC, can also damage the terminal.

The terminals support operation from a safety extra low voltage (SELV) or protective extra-low voltage (PELV) 24V DC power supply. Supported power supplies include catalog numbers 1606-XLP95E, 1606-XLP100E, and 2711P-RSACDIN.

**ATTENTION:** Use a SELV or PELV supply as required by local wiring codes for your installation. The SELV and PELV power sources provide protection so that under normal and single fault conditions, the voltage between conductors and earth ground does not exceed a safe value.

To power the terminal from the same power source as other equipment, use a DC power bus.

To connect the operator terminal to a DC power source, follow these steps.

1. Verify that the wiring is not connected to a power source.
2. Strip 7 mm (0.28 in.) of insulation from your power supply wires.
3. Secure the DC power wires to the marked terminals (+ and –) on the terminal block.
4. Secure the earth ground wire to the GND terminal on the terminal block.

The GND terminal must be connected to a low-impedance earth ground.
5. Apply power to the operator terminal.

Connect to a Network

The Ethernet port or ports connect to controllers on an EtherNet/IP™ network by using standard Ethernet connections. These types of networks are supported:

- Device Level Ring Network Topology on page 38
- Linear Network Topology on page 39
- Star Network Topology on page 40

Each of these EtherNet/IP network topologies supports applications that use Integrated Motion over an EtherNet/IP network, if necessary. See the EtherNet/IP Embedded Switch Technology Application Technique, publication ENET-AP005, for more information.

IMPORTANT  Terminals can have dual Ethernet ports, but only one device IP address.

Ethernet Ports

The Ethernet ports have one or two 10/100Base-T connectors for network communication and supports MDI/MDI-X connections and DLR network topology as indicated by the DLR network icon.

The terminal connects to an EtherNet/IP network by using a CAT5, CAT5E, or CAT6 twisted-pair, Ethernet cable with RJ45 connectors.
IMPORTANT To help prevent accidental disconnection of the Ethernet cable, follow these steps:
- To minimize vibration at the connector and reduce the chance that personnel working inside the panel can accidentally disconnect the cable, secure the Ethernet cable.
- To prevent pulling on the cable when the panel door is opened and closed, do not install the Ethernet cable too tightly. Leave some slack in the cable.

The maximum cable length between the Ethernet ports and a 10/100Base-T port on an Ethernet hub (without repeaters or fiber) is 100 m (328 ft).

WARNING: Do not connect or disconnect any communication cable with power applied to this device or any device on the network. An electric arc can cause an explosion in hazardous location installations. Make sure that the power is off or the area is nonhazardous before proceeding.

Device Level Ring Network Topology

A DLR network is a single-fault tolerant ring network that is intended for the interconnection of automation devices. This topology is also implemented at the device level. No additional switches are required.

TIP A DLR network has supervisor nodes and ring nodes. The PanelView Plus 7 Standard terminal operates only as a ring node on the network.
Only PanelView Plus 7 standard terminals with two Ethernet ports, for example, catalog number 2711P-T10C22D8S, operate on a DLR network.

DLR network topologies automatically convert to linear network topologies when a fault is detected. The conversion to the new network topology maintains communication of data on the network. The fault condition is typically detected and corrected.

For more information on DLR network topology, refer to EtherNet/IP Embedded Switch Technology Application Guide, publication ENET-AP005.

**Figure 3 - PanelView Plus 7 Standard Terminal in a DLR Network**

**Linear Network Topology**

A linear network topology is a collection of devices that are daisy-chained together across an EtherNet/IP network. Devices that can connect to a linear network topology use embedded switch technology to eliminate the need for a separate switch, as required in Star network topologies.

**TIP** The PanelView Plus 7 Standard terminal with one Ethernet port can be attached only at the ends of the linear network.
Chapter 2  Install the PanelView Plus 7 Standard Terminal

**Figure 4 - PanelView Plus 7 Standard Terminal at the End of a Linear Network**

Star Network Topology

A star network topology is a traditional EtherNet/IP network that has multiple devices that are connected to each other via an Ethernet switch.

**Figure 5 - PanelView Plus 7 Standard Terminal Connected Via a Stratix 6000 Switch**
Initial Startup

The first time that you start the system, the terminal goes through its start-up sequence and launches FactoryTalk® View ME Station in Configuration mode.

To change the action that occurs at startup, press Terminal Settings, then tap Startup Options. You can configure one of these options:

- Launch a FactoryTalk View ME HMI application.
- Launch FactoryTalk View ME Station in Configuration mode (default).
- Launch the Windows desktop.

**EXAMPLE** Terminals are initially shipped with desktop access disabled. You can configure your terminal to allow desktop access.

For more information on how to change the start-up option and desktop access, see [Chapter 3, Configure Terminal Settings](#).

Reset the Terminal

There are several ways to restart the terminal without having to disconnect and reapply power:

- From FactoryTalk View ME Station Configuration Mode, tap Reset.
- From the terminal desktop Start Menu, choose Programs>Restart System.
- To access Maintenance Mode, follow these steps.
  a. Plug in a USB keyboard.
  b. Press and hold the white box that appears in the bottom left corner when the terminal is booting up.

Refer to [Maintenance Mode Operations on page 145](#) for details on how to restart the terminal from Maintenance Mode.
Notes:
Configure Terminal Settings

**IMPORTANT**
- To access Configuration mode from an HMI application on the terminal, press Goto Configuration Mode. This button is added to application screens in FactoryTalk View Studio software during application development. The application stops running but is still loaded.
- If your application does not have a Goto Configuration Mode button, refer to Enter Configuration Mode on Startup on page 54 for details on how to access Configuration mode.
- To access Configuration mode from the Windows desktop, double-click the FTViewME Station icon.

**FactoryTalk View ME Station**
FactoryTalk® View ME Station is the runtime environment of the terminal. This environment lets you configure start-up options, load and run HMI applications, adjust terminal settings, access the Windows desktop, and perform other terminal operations.

When you reset the terminal, one of these actions occurs depending on the configured start-up option:
- FactoryTalk View ME Station launches in Configuration mode. This mode is the initial default.
- FactoryTalk View ME .mer application runs.
- Windows desktop launches.
**Figure 6 - FactoryTalk View ME Station Dialog Box**

<table>
<thead>
<tr>
<th>Press</th>
<th>To</th>
</tr>
</thead>
<tbody>
<tr>
<td>Load Application [F1]</td>
<td>Open a dialog box where you select a .mer application to load in the device. You must load an application before you can run it. The name of the loaded application appears under Current Application.</td>
</tr>
<tr>
<td>Run Application [F2]</td>
<td>Run the .mer application that is loaded in the terminal.</td>
</tr>
<tr>
<td>Application Settings [F3]</td>
<td>Open a menu of application-specific settings, such as device shortcuts defined for the loaded .mer application. Device shortcuts are read-only. For example, CLX is the device shortcut for a ControlLogix® controller.</td>
</tr>
<tr>

<td>Open a menu of options to modify terminal settings.</td>
</tr>
</tbody>
</table>
| Delete Log Files Before Running [F5] | Toggle between Yes and No.  
|                               | • Select Yes to delete all data log files, alarm history, and alarm status files before running the application.  
|                               | • Select No to run the application without deleting log files.                                                                   |
| Reset [F7]                    | Reset the terminal and launch an HMI application, FactoryTalk View ME Station software, or the Windows desktop. The action that occurs depends on the configured startup-option. |
| Exit [F8]                     | Exit FactoryTalk View ME Station. If desktop access is allowed, you can access the desktop.                                   |
| Device, IP Addr, Subnet (display only) | Identifies the device name, IP address, and subnet of the terminal on a connected Ethernet network. The network information is updated every 60 seconds. If the terminal is disconnected from the network, the IP address and subnet appear as 0.0.0.0. |
Terminal Settings

The terminal has settings that you can adjust that are not specific to the application.

1. Press Terminal Settings from the FactoryTalk View ME Station dialog box.
2. Select an option by touching the up and down cursors.
3. Press Enter to access selected function.

<table>
<thead>
<tr>

<td>Select the character to the left, right, above, or below the currently selected character.</td>
</tr>
<tr>
<td>Enter</td>
<td>Accept the entered characters and return to the previous dialog box.</td>
</tr>
<tr>
<td>ESC</td>
<td>Cancel the current operation and return to the previous dialog box.</td>
</tr>
</tbody>
</table>

Follow these steps to enter characters in the display area above the keyboard:

1. Select a character on the keyboard by touching a key.
2. Press Enter when done to exit the keyboard.
Load and Run an Application

To run a FactoryTalk View ME .mer application on the terminal, you must first load the application. You can load the application from internal storage (nonvolatile memory) in the terminal, an SD card, or a USB drive.

Follow these steps to load and run an application on the terminal.

1. Press Load Application from the FactoryTalk View ME Station dialog box.

2. To select the location of the file to load, press Source:
   - Internal Storage – nonvolatile memory of the terminal.
   - External Storage 1 – an SD card is loaded in the card slot.
   - External Storage 2 – a USB drive is loaded in the USB host port.

   **TIP**
   The path for Machine Edition files on the terminal is
   My Device\Application Data\Rockwell Software\RSViewME\Runtime.
   The path for Machine Edition files on the SD card or USB drive is
   \Rockwell Software\RSViewME\Runtime.

3. To select a .mer file from the list, use the up and down cursor keys.

4. To load the selected application, press Load.
   You are asked if you want to replace the current communication settings of the terminal with the settings defined in the application.

5. Select Yes or No.
   - To use the communication settings in the application, select Yes.
     The application settings replace the communication settings that are configured for the terminal.
   - To use the communication settings of the terminal, select No.

   The application loads and its name appears at the top of the FactoryTalk View ME Station dialog box.

6. To run the application that loaded, press Run Application on the FactoryTalk View ME Station dialog box.
Desktop Access

You can allow or restrict access to the desktop on the terminal. From the desktop, you can perform system and control panel operations. You can allow access temporarily, then disable desktop access to prevent unauthorized changes.

**TIP** Terminals are shipped from the factory with desktop access disabled.

With restricted access, you must enter a password to access the desktop. Each terminal has a default password and a challenge question.

<table>
<thead>
<tr>
<th>Default Password Credentials</th>
<th>Values</th>
</tr>
</thead>
<tbody>
<tr>
<td>Password</td>
<td>password (case sensitive)</td>
</tr>
<tr>
<td>Challenge question</td>
<td>What is the opposite of lock?</td>
</tr>
<tr>
<td>Challenge answer</td>
<td>unlock (case sensitive)</td>
</tr>
</tbody>
</table>

**IMPORTANT** Rockwell Automation recommends that you change the default password and challenge question and answer to something unique for your installation.

Enable Desktop Access

Follow these steps to enable desktop access.

1. Press Terminal Settings, then choose Desktop Access Setup.
2. To select Allow, press Desktop Access.
   
   The Enter Password dialog box opens.
   
   Each time that you change desktop access from disallow to allow, you must first enter a password. The initial default password is ‘password’.
3. To type the password, then press Enter, press Password.
4. To return to Desktop Access Management, press Enter again.
5. To exit terminal settings and return to the FactoryTalk View ME Station dialog box, press OK to exit Desktop Access Management, then Close.

6. To access the desktop, press Exit.

When desktop access is enabled, you are not required to enter a password.

**Disable Desktop Access**

**IMPORTANT** To restrict desktop access, the start-up option must be set to either Go to Configuration Mode or Run Current Application. See page 53 for details.

To restrict desktop access requires that you define a desktop password and challenge question:

- The password lets you access the desktop from FactoryTalk View ME Station when pressing Exit.
- The challenge question and response lets you change the password with the Reset function.

Follow these steps to disable desktop access.

1. Press Terminal Settings, then choose Desktop Access Setup.
2. Press Desktop Access and select Disallow.
   The Set Password button is enabled.
Chapter 3  Configure Terminal Settings

3. Refer to Set a Desktop Password on page 51 to define a new password and challenge question.
Set a Desktop Password

**IMPORTANT** When you restrict access to the desktop, you must define a new password and challenge question.

Follow these steps to define a new desktop password.

1. Press Set Password.

   The Desktop Access Set Password dialog box opens.

2. Press Set Password, enter an 8...20 character password, then press Enter.

   **IMPORTANT** You must correctly enter this password before accessing the desktop.

3. Press Set Challenge to enter a challenge question that you must correctly respond to when resetting the desktop password.

4. Press Set Response to enter a response to the challenge question, then press Enter.

5. Press OK.

   The Desktop Access Management Dialog shows that a password and challenge question are set.

6. Press OK to return to terminal settings.

**IMPORTANT** Secure your password and challenge question for future use. To clear and reset the password, you must correctly respond to the challenge question. If you forget the response, the only way to clear the password is to restore the factory default settings on the terminal. See [Factory default on page 145](#).
**Reset the Desktop Password**

To clear and change the current password, you must correctly respond to the current challenge question. If you do not remember the response, you must restore the terminal to its factory defaults. Refer to [Maintenance Mode Operations on page 145](#).

**IMPORTANT** You can reset the password and challenge questions if access to the desktop is restricted or set to disallow.

Follow these steps to reset the desktop password.

1. Press Reset Password from the Desktop Access Management dialog box.

![Desktop Access Management dialog box](image)

2. Press Answer Challenge and enter the correct response to the current challenge question.

3. Press Clear Password to clear the current password and challenge question.
   The dialog box shows the updated status of the password and challenge information.

4. Press Close.

5. Refer to [Set a Desktop Password on page 51](#) to set a new password and challenge question.
   After clearing the password, you must set a new desktop password or change the desktop access to ‘Allow’.
Configure Start-up Options

You can specify what action the terminal takes on startup or a reset.

<table>
<thead>
<tr>
<th>This Start-up Option</th>
<th>Performs This Action</th>
<th>Typical System</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not start FactoryTalk View ME Station</td>
<td>Launches the Windows desktop on startup.</td>
<td>Open</td>
</tr>
<tr>
<td>Go to Configuration Mode</td>
<td>Launches FactoryTalk View ME Station in Configuration mode on startup. This mode is the initial, factory default setting.</td>
<td>Closed</td>
</tr>
<tr>
<td>Run Current Application</td>
<td>Runs the FactoryTalk View ME application that is loaded in the terminal on startup.</td>
<td>Closed</td>
</tr>
</tbody>
</table>

**IMPORTANT** When desktop access is restricted, the start-up option must be set to Run Current Application or Go to Configuration Mode (default). See page 48 for details on how to allow or restrict desktop access.

**Disable FactoryTalk View ME Station on Startup**

To launch the desktop on startup, you must disable FactoryTalk View ME Station.

**TIP** You can also launch the desktop by pressing Exit on the FactoryTalk View ME Station dialog box.

Follow these steps to disable FactoryTalk View ME Station on startup.

1. Press Terminal Settings, then choose Startup Options.

2. Press On Startup until ‘Do not start FactoryTalk View ME Station’ is selected.

   **TIP** Desktop access must be set to allow or you get a warning. See enable desktop access on page 48.

3. Press OK.
Chapter 3  Configure Terminal Settings

Enter Configuration Mode on Startup

Follow these steps to launch FactoryTalk View ME Station in Configuration mode on startup.

1. Press Terminal Settings, then choose Startup Options.
2. To select Go to Configuration Mode, press On Startup.
3. To view or change optional settings, press Configuration Mode Options.

4. To specify whether you want to load the current application on startup, press Load Current Application.
5. To specify what configuration settings are used when the loaded application is run, press Replace RSLinx® Enterprise Communications:
   - To use the RSLinx communication settings in the terminal, select No.
   - To replace the terminal settings with the communication settings in the application, select Yes. Any changes to RSLinx device addresses or driver properties on the terminal are lost.
6. To return to the previous dialog box, press OK.
7. To return to terminal settings, press OK.
Run the Loaded Application on Startup

Follow these steps to run the FactoryTalk View .mer application that is loaded in the terminal on startup.

1. Press Terminal Settings, then choose Startup Options.
2. To select Run Current Application, press On Startup.
3. To view or change optional settings, press Run Options.

If the application is not loaded, the options are disabled.

4. Press Replace RSLinx Enterprise Communications to specify what configuration settings are used when running the application:
   - To use the RSLinx communication settings in the terminal, select No.
   - To replace the terminal settings with the communication settings in the application, select Yes. Any changes to RSLinx device addresses or driver properties on the terminal are lost.

5. To specify what action to take with the log files on startup, press Delete Log Files On Every Power Cycle:
   - To delete all log files (data, alarm history, alarm status) generated by the terminal before running the application, select Yes. The files are deleted from the system default location.
   - To retain all log files, select No.

6. To return to the previous dialog box, press OK.
7. To return to terminal settings, press OK.
Configure Controller Address

To configure communication information for your application and controller, use RSLinx Enterprise software.

**TIP** You can also configure communication information for your application and controller by using FactoryTalk View Studio software.

To edit the device address of the controller, follow these steps.

1. Press Terminal Settings, then choose Networks and Communications>RSLinx Enterprise Communications.

2. Select the controller in the tree.

3. To view the device name and current address, press Edit Device.

4. To modify the address, press Device Address.

   The input panel opens with the current address.

5. Enter the address in the input panel and press Enter.

6. Press OK.

Updates do not take effect until the terminal is restarted.

Configure Ethernet Settings

The terminal has a built-in Ethernet driver. You can modify the following Ethernet information for your device:

- IP address of terminal on network, including link speed
- Device name that identifies terminal on network
- User name and password to access network resources
- Enable or disable either Ethernet port to configure for DLR, star, or linear network topologies
Set the Ethernet Address of the Terminal

Some networks automatically assign an IP address to Ethernet devices if dynamic host configuration protocol (DHCP) is enabled. If DHCP is disabled, you can manually enter an IP address.

To view or enter an IP address for your terminal, follow these steps.

1. Press Terminal Settings, then choose Networks and Communications>Network Connections>Network Adapters.

2. To view or modify the IP address, press IP Address.

3. To enable or disable DHCP assignment of addresses, press Use DHCP.
   - If DHCP is enabled or set to Yes, IP addresses are automatically assigned to newly attached devices on the network.
   - If DHCP is disabled or set to No, you can manually enter the IP address. Press IP Address, Subnet Mask, and Gateway to enter IP formatted addresses.

   **TIP**
   - IP Address – The format of the IP address is xxx.xxx.xxx.xxx; for example, 192.168.124.96. The first set of decimal numbers is in the range 1…255; the last three sets are in the range 0…255. The default is 000.000.000.000.
   - Subnet Mask – Address must be identical to the server subnet mask.
   - Gateway – optional address.
   - MAC ID – read-only field.

4. Press OK when done.

   If prompted, reset the device from the FactoryTalk View ME Station dialog box.

5. Press Close.
Chapter 3  Configure Terminal Settings

Set the Ethernet Link Speed

You can change the rate and mode for how data is transmitted on the Ethernet network. The default setting is Auto. The Auto option automatically configures the speed of the device to match the speed on the local network.

**TIP**  The Auto option is preferred because it determines the actual speed and duplex setting of the connected device on the Ethernet network.

If you select a manual option, make sure that the speed and duplex setting for the connected device on the Ethernet network is identical. If the settings are not identical, there can be decreased network performance and errors.

1. Press Terminal Settings, then choose Networks and Communications>Network Connections>Network Adapters.

2. To access the Ethernet link settings, press Settings.

3. To change the rate that data is transmitted at over the Ethernet network, press Ethernet Configuration.

4. To return to the Network Adapters dialog box, press OK.

Configure the Ethernet Ports

To configure the Ethernet ports of the terminal, follow these steps.

1. Press Terminal Settings, then choose Networks and Communications>Network Connections>Network Adapters.

2. To access the Ethernet link settings, press Settings.

3. To enable or disable the ports that you want to use for your network configuration, press Ethernet Link1 and Ethernet Link2.
4. To select Auto, press Ethernet Configuration.
5. To save the configuration, press OK.
6. For the changes to take effect, restart the terminal.

You can also configure the Ethernet ports as a system default for a closed system. See Configure the Ethernet Ports on page 113.

**Name the Server Addresses**

You can name the server addresses for the EtherNet/IP network adapter. These addresses are automatically assigned if DHCP is enabled for the adapter.

1. Press Terminal Settings, then choose Networks and Communications>Network Connections>Network Adapters.

   ![Network Adapters Screen](image)

2. Press Name Servers.
3. To enter a corresponding name server address, press a button.
4. Press OK when done.
Chapter 3 Configure Terminal Settings

Modify Device Name of Terminal

Each terminal has a unique name that identifies it on the network.

1. Press Terminal Settings, then choose Networks and Communications>Network Connections>Device Name.

2. To edit the default device name, press Device Name.

3. To modify the description for the device, press Device Description.

   **TIP** The description is a maximum of 50 characters. The default description is Rockwell Automation plus the device catalog number.

4. Press OK.
Copy Files on Terminal

You can copy FactoryTalk View ME .mer application files or font files between nonvolatile memory of the terminal and a USB drive, or SD card.

1. Press Terminal Settings, then choose File Management>Copy Files>Copy Applications or Copy Fonts.

2. To select the location of the file you want to copy, press Source:
   - Internal Storage – nonvolatile memory of the terminal.
   - External Storage 1 – SD card that is loaded in card slot of terminal.
   - External Storage 2 – USB drive that is loaded in USB host port of terminal.

3. Select a file that appears in the list for the selected storage area.

4. Press Destination on the same dialog box.

5. To select the storage location to copy the file, press Destination.
   The destination must be different than the source location.

6. To copy the selected file to the target location, press Copy.
   If the file exists, you are asked if it is okay to overwrite the file. Respond by selecting Yes or No.

   **TIP** If you are saving files to the terminal, be sure to save the .mer files to My Device\Application Data\Rockwell Software\RSViewME\Runtime\ and save font files to \Rockwell Software\RSViewME\Fonts\.
Delete Files from Terminal

You can delete FactoryTalk View ME application .mer files or font files that reside in nonvolatile memory of the terminal, a USB drive, or an SD card.

1. Press Terminal Settings, then choose File Management>Delete Files>Delete Applications or Delete Fonts.

2. To select the storage location of the application or font file you want to delete, press Source:
   - Internal Storage – nonvolatile memory of the terminal.
   - External Storage 1 – SD card that is loaded in card slot of terminal.
   - External Storage 2 – USB drive that is loaded in USB host port of terminal.

3. Select a file that appears in the list for the selected storage area.

4. Press Delete.

5. Select Yes or No when asked if you want to delete the selected application or font file.

Delete Log Files

You can delete log files, alarm history files, and alarm status files from the System Default location of the terminal. The application generates the files during runtime.

1. Press Terminal Settings>File Management>Delete Files>Delete Log Files.

   You are asked to confirm the deletion of the files.

   Do you want to delete the FactoryTalk View ME Station Log Files?

2. Select Yes or No.

Log files not in the System Default location are not deleted.
Display Settings

For the terminal display, you can change its brightness, configure the screen saver, or disable the screen cursor.

Adjust Display Intensity

You can adjust the intensity of the backlight in 10% increments from 1…100%. At 0%, the backlight is minimally visible. You can use the default intensity of 100% or adjust the intensity for runtime operations.

1. Press Terminal Settings, then choose Display>Display Intensity.

2. To switch between Default intensity and Runtime intensity, press Startup Intensity.
   - If you select Runtime, the start-up screens use the runtime intensity.
   - If you select Default, the start-up screens use the default setting of 100%.

3. Increase or decrease the intensity for runtime operations by pressing the up or down cursors.

4. Press OK when done to save changes.
Configure the Screen Saver

A screen saver image appears on the terminal display when no user activity is sensed for a certain time. The default idle time is 10 minutes. You can adjust the idle time and intensity level of the screen saver, disable the screen saver, or disable the screen saver image.

1. Press Terminal Settings, then choose Display>Screen Saver.

2. To change the idle period for activating the screen saver, press Screen Saver.
   To disable the screen saver, select Disabled.

3. To increase or decrease the brightness intensity of the screen saver, press the up and down cursors.

4. To access the screen saver image setting, press Advanced Settings.
   a. To disable or enable the current screen saver, press Screen Saver Image. See page 91 for details on how to change the screen saver image.
   b. To return to the Screen Saver dialog box, press OK.

5. To exit and return to terminal settings, press OK.

Disable the Screen Cursor

The terminal has a screen cursor that you can disable or enable.

1. Press Terminal Settings, then choose Display>Cursor.

2. To disable or enable the cursor, press Enable Cursor.

3. To exit and return to terminal settings, press OK.
Input Device Settings

You can adjust settings for input devices that are used by the terminal including the touch screen and string entry popup.

Calibrate the Touch Screen

To calibrate the touch screen, follow these steps.

1. Press Terminal Settings, then choose Input Devices>Touch Screen>Calibration.

   Carefully press and briefly hold stylus on the center of the target. Repeat as the target moves around the screen.

2. Follow the instructions on the screen.

   When the calibration is complete, a message appears to indicate the measurement of new calibration settings. You can do one of the following:
   - To register saved data, press the screen.
   - To cancel saved data and keep the current settings, wait for 30 seconds.

IMPORTANT Use a plastic stylus with a minimum tip radius of 1.3 mm (0.051 in.) A stylus is more precise than a finger and also protects the screen.
Set the Double-tap Sensitivity for a Touch Screen

You can set and test the sensitivity of both speed and physical distance between touch screen presses.

**TIP** The process is identical to set and test the sensitivity of mouse clicks. To adjust the sensitivity of mouse clicks, press Terminal Settings, then choose Input Devices>Mouse.

1. Press Terminal Settings, then choose Input Devices>Touch Screen>Double Tap Sensitivity.

2. To set the sensitivity of touch screen presses, double-tap Set.
3. To test the sensitivity of touch screen presses, double-tap Test.
   The Test button reverses its foreground and background colors.
4. Press OK when done.

Change the Popup for String Entry

You can use a string popup for character input instead of the popup keyboard or input panel.

1. Press Terminal Settings, then choose Input Devices>String Popup.

2. To select the preferred method for character input, press 'Invoke pop-up character input instead of pop-up keyboard'.
3. Press OK.
Configure Print Options

You can configure settings for print displays, alarm messages, or diagnostic messages from FactoryTalk View ME applications. The setup for print displays and messages is the same. Advanced settings are different.

PanelView Plus 7 Standard terminals support selected printers. For a list of supported printers, go to [http://www.rockwellautomation.com/knowledgebase](http://www.rockwellautomation.com/knowledgebase) and search the Knowledgebase for keywords 'Printers Supported on PanelView Plus'.

Printer installation is plug-and-play. Supported printers are automatically mapped to the appropriate driver. Printers that do not configure automatically to the appropriate driver can be installed manually.

Follow these steps to access the print setup.

1. Press Terminal Settings, then choose a Print Setup> option:
   - Alarm Print Setup
   - Diagnostic Setup
   - Display Print Setup

   The Print Setup dialog box shows installed printers that are available to the FactoryTalk View ME application. The list of printers that shows depends on what printers you install.

   The terminals are not shipped with pre-configured printers so initially the dialog box is empty.

2. Select an installed printer.

   **TIP** The printer that you select must be in the control panel Printers applet.
   
   A failed attempt to install a printer is reported in the system event log.
   
   Use the control panel in Windows Explorer to install a printer that does not install automatically.
3. To access these options, press Advanced Settings:
   - Options for print displays include print orientation, draft mode, and color.
   - Options for print diagnostic and alarm messages determine when to print messages that are sent to the network or USB port.

<table>
<thead>
<tr>
<th>Print Messages After</th>
<th>Default Value</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Specified number of messages</td>
<td>60 messages</td>
<td>When the queue has 60 messages, the messages are printed regardless of how long they have been in the queue. You can change the number of messages.</td>
</tr>
<tr>
<td>500 messages or timeout period, whichever is first</td>
<td>168 hours (7 days)</td>
<td>If the queue has 350 messages after 168 hours, the 350 messages are printed. You can change the timeout period.</td>
</tr>
</tbody>
</table>
| Specified number of messages or timeout period, whichever is first | 60 messages, 168 hours (7 days) | If the queue has 60 messages after 24 hours, then the 60 messages are printed. You can change the number of messages and the timeout period. For example, the number of messages is set to 75 and the timeout period is set to 48 hours.
   - If the queue has 75 messages after 24 hours, then the 75 messages are printed before the set timeout of 48 hours.
   - If the queue has 15 messages after 48 hours, the 15 messages are printed after the set timeout period. |

4. Press OK when done.

5. To return to terminal settings, press OK.
Configure Diagnostics

You can log diagnostics to a remote computer for troubleshooting.

To configure and forward diagnostics to a computer, follow these steps.

1. Press Terminal Settings, then choose Diagnostic Setup.

A list of diagnostic nodes appears.

**TIP** To access Remote Log or Message Routing setup, select the node then press Edit.

The Remote Log destination forwards messages to a Windows computer that runs diagnostics. The IP address and port number identify the computer.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
<th>Valid Values</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address</td>
<td>IP address of the remote Windows computer.</td>
<td>xxx.xxx.xxx.xxx</td>
</tr>
<tr>
<td>Port</td>
<td>The port that is used to communicate with the remote Windows computer.</td>
<td>4445 (default)</td>
</tr>
</tbody>
</table>

Select Message Routing to access the following dialog boxes:

- Remote Log
- FactoryTalk View Diagnostics List

Each dialog box shows a list of messages that can be sent to a destination. Cursor to a message, then press On/Off to enable or disable the message. Messages with checked boxes are enabled. Messages with cleared boxes are disabled.

Audit Message Logging lets you log messages as Audit or Information.
Check Integrity of Application Files

It is good practice to check the integrity of the .mer application that is loaded in the terminal and the runtime files. Errors, warnings, and information messages are logged to a file. You can view the log and clear items from the log.

**TIP** Runtime files enable applications to run on the terminal. If the terminal is not functioning correctly, a review of the logs can identify an error in a runtime file.

1. Press Terminal Settings, then choose File Integrity Check.

   ![File Integrity Check Dialog Box]

   - Press either of the Enable options to disable integrity checks of the .mer application or the runtime files.
   - Integrity checks are automatically performed on the application .mer file and runtime files. If you disable either of these functions, the files are not checked and the log file is not updated.

2. Press OK to save changes.

Follow these steps to view the log generated by runtime files.

1. Press View Log from the File Integrity Check dialog box.

   ![View Log](image)

   - To display details for that event, select an event and press More Details.
   - To clear all details from the log, press Clear All.
   - To return to previous dialog box, press Close.
View and Clear the System Event Log

The System Event Log displays warnings, errors, and events logged by the terminal. The log provides a time stamp of when each event occurred and text that describe the event. If the event log is full when a new event occurs, the oldest entry is removed to accommodate the new event.

2. To display details for the event, select an event then press More Details.
3. To clear all events in the log, press Clear All.
4. Press Close.

Enable or Disable the Alarm Display

The terminal displays each alarm as it occurs in the alarm display or alarm banner. When the operator acknowledges the most recent alarm, the alarm display closes or remains open. The default is to close the alarm display.

1. Press Terminal Settings, then choose Alarms.
2. To toggle between Yes or No, press ‘Close Alarm Display When Newest Alarm Acknowledged’.
   - Yes closes the alarm display when the newest alarm is acknowledged.
   - No leaves the alarm display open when newest alarm is acknowledged.
3. Press OK.
Display System Information

You can view terminal and firmware revision information for software that is installed on a terminal.

View Terminal Information

You can view the following information:
- Total power on time in minutes
- Battery voltage and state
- Memory that is allocated and in use
- Random access memory (RAM) usage during runtime

To view status information for your terminal, follow these steps.

1. Press Terminal Settings, then choose System Information > Terminal Information.

- Battery voltage must be at least 2.75V DC.

<table>
<thead>
<tr>
<th>Battery State</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GOOD</td>
<td>Good battery condition.</td>
</tr>
<tr>
<td>FAILING</td>
<td>Low battery. Replace the battery.</td>
</tr>
<tr>
<td>BAD</td>
<td>Battery is missing or bad. Replace the battery.</td>
</tr>
</tbody>
</table>
2. To view information for the Program RAM and Available Flash (nonvolatile) memory, press Memory Allocation.

3. To return to previous dialog box, press Close.

4. To view the RAM used by the application at runtime, press Runtime RAM Usage.

   This information can be helpful if you are troubleshooting problems that are related to RAM usage.

5. To return to the previous dialog, press OK.

6. Press Close until you return to terminal settings.
View FactoryTalk View ME Station Information

You can view firmware and version information for components that are installed on your terminal and access technical support information.

1. Press Terminal Settings, then choose System Information> About FactoryTalk View ME Station.

2. To display the support phone number and website, press Technical Support.

3. Press Close until you return to terminal settings.
Time and Date Settings

You can change the time zone, date, time, and regional settings for terminal operations.

**TIP** Set the time zone before you change the current date and time on the terminal.

Change the Time Zone on the Terminal

You can view or modify the current time zone on the terminal. Time zones are installed with the operating system. A change to the time zone adjusts the current time and date to match the time zone.

The clock records the time when files are created or modified on the terminal. You can change the time and time zone.

1. Select Terminal Settings, then choose Time/Date/Regional Settings>Time Zone.

2. Press the up or down cursor to select a time zone.

   Daylight Saving Time is enabled for all time zones except Japanese (Japan does not support Daylight Saving Time). The clock is adjusted automatically when Daylight Saving Time changes.

3. Optionally, press Use Daylight Savings to enable or disable Daylight Saving Time for a time zone.

   Changes are not permanent until you close the Time Zone dialog box.

4. Press Close when done.

5. To return to the previous dialog box, press OK.
**Change the Current Date on the Terminal**

To adjust the date on the terminal, follow these steps.

1. Select Terminal Settings, then choose Time/Date/Regional Settings>Date.

2. Press Year, Month, and Day to change the current values above the button:
   - Year is four digits in the range 1980...2099
   - Month is in the range 1...12
   - Day is in the range 1...31 and validated by month

3. Press OK when done.

**Change the Current Time on the Terminal**

To adjust the time on the terminal, follow these steps.

1. Select Terminal Settings, then choose Time/Date/Regional Settings>Time.

2. To change the current values, press Hour, Minute, and Seconds:
   - Hour range is 0...23 (24-hour format)
   - Minute and second range is 0...59

3. Press OK when done.
Regional Settings

You can change the display format for dates, times, and numerics to match the standards of a country or region. Languages are installed with the operating system. Before changing regional settings, you must select a language.

To select a language that is installed on the terminal, follow these steps.

1. Select Terminal Settings, then choose Time/Date/Regional Settings>Language.
2. Select a language by pressing the up and down cursors.
3. Press OK.

The selected language shows under Current Language on the Regional Settings dialog box.

Change the Decimal Separator

You can change the decimal separator that is used in numeric formats for the selected language. The default separator is a period.

1. Select Terminal Settings, then choose Time/Date/Regional Settings>Numeric Format.
2. Enter a maximum of three characters for the new separator.
3. Press OK.
Change the Time Format for a Language

To change the format of the time for the selected language, follow these steps.

1. Select Terminal Settings, then choose Time/Date/Regional Settings>Time Format.

   ![Sample Time Format Configuration]

   The current time appears in the selected format.

2. To adjust the formats, press the appropriate selections.

   The sample format changes as you make selections.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Time Format</td>
<td>h:mm:ss tt (default) h = 12-hour time display, no leading zero tt = AM or PM symbol</td>
<td>7:23:02 AM or 1:13:31 PM 11:43:59 AM</td>
</tr>
<tr>
<td>Time Format</td>
<td>hh:mm:ss tt hh = 12-hour time display with a lead zero tt = AM or PM symbol</td>
<td>07:23:02 AM or 01:13:31 PM 11:43:59 PM</td>
</tr>
<tr>
<td>AM Symbol</td>
<td>Characters to indicate AM. If the time format is set to a 12-hour time display (h:mm:ss tt or hh:mm:ss tt), you can modify the AM symbol.</td>
<td>AM (default) 12 character max</td>
</tr>
<tr>
<td>PM Symbol</td>
<td>Characters to indicate PM. If the time format is set to a 12-hour time display (h:mm:ss tt or hh:mm:ss tt), you can modify the PM symbol.</td>
<td>PM (default) 12 character max</td>
</tr>
<tr>
<td>Separator</td>
<td>Characters that separate fields in time format.</td>
<td>: (default) 3 character max</td>
</tr>
</tbody>
</table>

3. Press OK.
**Change the Short Date Format for a Language**

To change the short date format for the selected language, follow these steps.

1. Select Terminal Settings, then choose Time/Date/Regional Settings>Regional Settings>Short Date Format.

![Short Date Format Image](image)

2. To change the short date format, press Format.
   The date updates in the Sample area as you change formats.
3. To change the character between date elements, press Separator.
   The separator can be three characters. The default separator is – or /.
4. Press OK when done.

**Change the Long Date Format for a Language**

To change the long date format for the selected language, follow these steps.

1. Select Terminal Settings, then choose Time/Date/Regional Settings>Regional Settings>Long Date Format.

![Long Date Format Image](image)

2. To change the long date format, press Format.
   The date updates in the Sample area as you change formats.
3. Press OK when done.
Chapter 4

Windows Operating System

Operating System Features

The PanelView™ Plus 7 terminal runs the Microsoft Windows CE version 6.0 operating system (OS) providing the following features:

- Command shell
- Command processor
- Console window
- Windows Explorer shell
- Common dialog box
- Control panel
- Network user interface
- Soft keyboard input panels
- PDF reader
- Mouse and touch screen support with right-click support.

**TIP** Touch the screen for 1 second or longer for a right-click.
· VNC server and client viewer

**IMPORTANT** The terminal distributes two VNC client viewers:

- Vncviewer.exe is in the /Windows folder on the terminal desktop. To connect to, view, and control a PanelView Plus 7 terminal, deploy this viewer to a personal computer.
- Another viewer on the terminal lets you establish a VNC connection to another PanelView Plus 7 terminal. To access this viewer, click Start>Programs>VNC Viewer.

## Application Support

The Windows CE operating system provides the following application support:

- .NET Compact Framework, version 3.5 or later
- C++ libraries and runtimes
- Component services DCOM/COM/OLE
- Message queueing MSMQ
- MSXML, version 3.0 or later
- Microsoft foundation classes (MFC) for devices, version 9.0 or later
- Active template library (ATL)
- ActiveSync
- Cabinet (CAB) file installer/uninstaller
- ToolHelp application programming interface (API)
- Error reports (generator, transfer driver, control panel)

## Scripting Support

The Windows CE operating system supports these scripting features:

- Batch/Command (BAT and CMD files)
- CS-Script
- JScript

## Network Support

The Windows CE 6.0 operating system supports these network features:

- Winsock support
- Network utilities – ipconfig, ping, route
- Network driver architecture (NDIS)
- Windows networking API/Redirector
- Wired Local Area Network (LAN), 802.3, 802.5
Server Support

Table 20 lists the servers that support the Windows CE 6.0 operating system.

Table 20 - Windows CE 6.0 Server Support

<table>
<thead>
<tr>
<th>Server</th>
<th>Default State</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Web server</td>
<td>Enabled</td>
<td>The web server delivers content, such as web pages, by using the HTTP protocol over the web.</td>

<td>Enabled</td>
<td>A web server application that provides remote users access via a web browser to the FactoryTalk® View ME HMI application that is running on the terminal. ViewPoint software is a Rockwell Automation® product.</td>
</tr>
</tbody>
</table>
Windows Explorer

From the desktop, you can access Windows Explorer in several ways:

- Double-click the My Device icon.
- Choose Start>Programs>Windows Explorer.

![Windows Explorer Icon](image)

A few folders contain items specific to the PanelView Plus 7 Standard terminal.

<table>
<thead>
<tr>
<th>Folder</th>
<th>Content</th>
</tr>
</thead>
<tbody>
<tr>
<td>Application data</td>
<td>Contains FactoryTalk View ME application files.</td>
</tr>
<tr>

<td>Path: \Application Data\Rockwell Software\RSView ME\Runtime</td>
</tr>
<tr>
<td>VFS (virtual file system)</td>
<td>Contains firmware files and backup/restore files for the current system image.</td>
</tr>
<tr>
<td></td>
<td>Paths: \VFS\Platform Firmware and \VFS\Backup &amp; Restore</td>
</tr>
</tbody>
</table>

Taskbar

From the taskbar, you can access the Start menu, device IP information, the current language and time, input panels, and open programs.

![Taskbar Icon](image)

To turn the taskbar on or off, choose Start>Settings>Taskbar and Start Menu, then clear or check the Auto Hide checkbox.

**TIP**  Touch the bottom of the display to recover the taskbar when in Auto Hide mode.

Soft Input Panels

The operating system offers different input panels for entering data. You can access these input panels from the taskbar or the control panel. From the taskbar, click the input panel icon and choose the onboard keyboard that you want to use:

- CHT Chajei IM (Chinese)
- CHT Phonetic IM (Chinese)
- Keyboard (small keyboard)
- LargeKB (large keyboard)
- MS Kana IM (Japanese)
- MS Roma IM (Japanese)
- Hide Input Panel (closes the keyboard)

**TIP** The input panel icon changes depending on which input panel you select.
Windows Control Panel

Applications in the Windows control panel let you view and configure system and terminal settings. For example, you can monitor hardware performance, calibrate the touch screen, or adjust screen saver settings.

**TIP** Most terminal settings are also available in FactoryTalk View ME Station Configuration mode.

The language of the control panel applications is based on the language set for the operating system. English is the default.

You can access the control panel in several ways:

- Choose Start>Settings>Control Panel.
- Open My Device on the desktop, then double-click Control Panel.

This chapter covers control panel applications specific to the terminal.

**TIP** From the View menu, you can change the size of the icons or see a brief description of each.

**TIP** Many control panel applications have scroll bars to view information on a smaller display, however, most examples show the full view for clarity.
Chapter 4  Windows Operating System

Backup and Restore

The Backup and Restore application lets you copy the current system image on the terminal, then restore that image to the same terminal or other terminals. This function is useful if you want to clone a system image to multiple terminals.

**TIP** You can back up a system image to a USB drive or SD card. Rockwell Automation recommends using a USB drive or SD card with a minimum of 1 GB of available space. For applications with a large file system, use a minimum of 2 GB of available space.

A typical backup includes the following:
- File system
- Firmware image
- Windows registry
- Optional user configuration data

You can include user configuration data in the backup by selecting the Advanced Network & Display Settings checkbox in the Backup & Restore dialog box.

**Table 21 - Advanced Network and Display Settings**

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ethernet network</td>
<td>• DHCP-enabled or fixed IP address&lt;br&gt;• Primary and secondary DNS&lt;br&gt;• Primary and secondary WNS&lt;br&gt;• Speed and duplex settings</td>
</tr>
<tr>
<td>USB network</td>
<td>USB IP address and subnet mask, Gateway, DHCP-enabled or fixed IP address</td>
</tr>
<tr>
<td>Network</td>
<td>Device name</td>
</tr>
<tr>
<td>Display</td>
<td>• Display brightness&lt;br&gt;• Screen saver dimmer timeout</td>
</tr>
</tbody>
</table>

**Perform a Backup**

Follow these steps to perform a backup.

1. Insert a USB drive or SD card into the appropriate slot on the terminal.
2. In the control panel, double-click the Backup & Restore icon.
3. Click browse ... on the Backup tab.
4. Select the target location for the back-up file:
   - USB Storage if you are using a USB drive
   - Storage Card2 if you are using an SD card

5. Type a name for the back-up file.
   Back-up files have the .pvb file type.

6. Click OK.

7. Click Backup to start the process.
   A progress bar shows the status of the operation. The backup can take a few minutes. You receive notification when the backup completes.

8. Click OK.
   If the file exists, you are asked if you want to overwrite the current file.

9. To close the Backup & Restore dialog box, click Exit.

   **TIP** You can verify the .pvb file was successfully created when you double-click My Device and select the target location for the backup. If the .pvb file was not successfully created, use a USB drive or SD card with more available space.

   Rockwell Automation recommends using a USB drive or SD card with a minimum of 1 GB of available space. For applications with a large file system, use a minimum of 2 GB of available space.
**Restore a Back-up Image**

Follow these steps to restore or clone a back-up image to storage device.

1. Insert the USB drive or SD card into the appropriate slot of the target device.
2. In the control panel, double-click Backup & Restore.
3. Click the Restore tab.
4. To select the back-up file to restore, click ... (browse).
5. Select the location of the back-up file:
   - USB Storage if you are using a USB drive
   - StorageCard2 if you are using an SD card
6. Select the .pvb back-up file to restore.
7. Click OK.
8. Click Restore.
   The restore automatically includes advanced network and display settings if you selected this option when performing the backup.
9. To start the restore process, click Yes.
The terminal starts the restore process that takes a few minutes.

**IMPORTANT** Do not remove the USB drive, SD card, or power off the terminal during a restore. This action can corrupt the firmware.

If the restore fails, reset the terminal from the maintenance menu. Refer to [Maintenance Mode Operations on page 145](#) for details.

When the restore completes successfully, the terminal restarts.
Display Properties

Use Display Properties to control the desktop background image and appearance, the brightness of the backlight, and screen saver settings.

Desktop Background

The Background tab in Display Properties controls the background bitmap on the desktop. The default bitmap is 'abclocknight'.

You can select another image from the pull-down menu or browse the system for a bitmap image. Some custom images are in the \Windows folder.

Desktop Appearance

The Appearance tab in Display Properties controls the visual style and colors of the desktop and other window elements.

Two custom schemes and images provide for day or night viewing. When you change schemes, remember to change the image on the background tab.

<table>
<thead>
<tr>
<th>Scheme</th>
<th>Desktop Color</th>
<th>Background Logo</th>
</tr>
</thead>
<tbody>
<tr>
<td>AB Day</td>
<td>Blue</td>
<td>abclockday</td>
</tr>
<tr>
<td>AB Night</td>
<td>Black</td>
<td>abclocknight</td>
</tr>
</tbody>
</table>

Backlight Intensity

The Backlight tab in Display Properties lets you set the brightness level of the display between 1...100%. At 1%, the display is minimally visible.
Screen Saver

The screen saver extends the life of the display. When the terminal is idle for a continuous period, the screen saver dims the backlight and displays a moving image. When deactivated, the display brightness returns to its normal level.

The Screen Saver tab in Display Properties lets you perform these actions:

- Change the idle timeout for the screen saver. The default is 10 minutes. When the screen saver activates, the dimmer controls the backlight intensity. You set the brightness of the dimmer in range 0…100%. The default intensity is 10%. At 0%, the backlight is minimally visible.
- Browse the system for another screen saver bitmap. The default screen saver is SSFloat.bmp. Click Add or Remove to change screen saver bitmap. The system recognizes bitmaps in the \Windows folder. Only one bitmap is supported.
- Disable the screen saver by clearing the ‘Start screen saver after’ checkbox.

Cursor

The Advanced tab in Display Properties lets you enable or disable the visible cursor that you see on the display. The cursor is visible by default.

Screen Rotation

The Advanced tab in Display Properties lets you rotate the screen on the terminal. The default is 0°.

After you change the screen rotation, you have to calibrate the touch screen.
1. Plug in a USB mouse to the terminal.
2. Restart the terminal.
3. To calibrate the touch screen, use the mouse.
4. See Calibrate the Touch Screen on page 65 for calibration details.
Hardware Monitor

The Hardware Monitor provides status and troubleshooting information for the terminal. You can view running processes, system event log, battery voltages, current temperature, CPU load, and memory load.

Processes

The Processes tab in the Hardware Monitor shows all processes running on the terminal and memory usage of each process.

System Event Log

The System Event Log in the Hardware Monitor shows warnings, errors, and events that the terminal logs.

The log provides a date and time stamp of each event and text that describes the event. The maximum size of the log is 1 MB, approximately 4,000 records. If the log exceeds 1 MB, the oldest 512K of information is removed. You can perform the following operations on the log file:

- Press Export Log to export the log file to a CSV file (*.csv) in the \Windows folder. The default file name is SystemLog.csv.
- To clear all events from the log, press Clear Log.
- To view more details on a selected event, press Details.
Monitors

The Monitors tab in the Hardware Monitor provides continuous voltage, temperature, and load information for the terminal.

![Monitors tab screenshot]

**Battery Voltage**

The Monitors tab gives a visual status and voltage reading of the battery for the real-time clock. The battery voltage is read at power-up.

**Table 22 - Battery Conditions**

<table>
<thead>
<tr>
<th>Condition</th>
<th>Battery</th>
</tr>
</thead>
<tbody>
<tr>
<td>Depleted</td>
<td>Less than 2.0V indicates a dead battery or no power.</td>
</tr>
<tr>
<td>Low</td>
<td>2.0…2.74V</td>
</tr>
<tr>
<td>Normal</td>
<td>2.75V or higher</td>
</tr>
</tbody>
</table>

An event is logged to the system event log for a low or depleted battery.

**Temperatures**

The Monitors tab gives a visual status and reading of the current CPU, logic board, and display temperature. The temperature updates every ten minutes.

**Table 23 - Temperature Conditions**

<table>
<thead>
<tr>
<th>Condition</th>
<th>Temperature</th>
</tr>
</thead>
<tbody>
<tr>
<td>Low</td>
<td>–</td>
</tr>
<tr>
<td>Normal</td>
<td>25…94 °C (77…201 °F)</td>
</tr>
<tr>
<td>High</td>
<td>95 °C (203 °F) and higher</td>
</tr>
</tbody>
</table>

An event is logged to the system event log for a failed temperature sensor.

**IMPORTANT**  A high temperature condition causes an automatic restart attempt. Restart attempts continue indefinitely until the system is cool enough to resume normal operation. High temperature conditions are logged to the system event log.
Logo Manager

Use the Logo Manager to change the logo that appears on the splash screen at startup and the default screen saver image. The default splash-screen image is the Allen-Bradley logo (ablogo.bmp).

The logo can be a .bmp, .jpg, .gif, or .png image. A 90 x 90 pixel, 16-bit color image provides the best results.

Before applying the new logo, you can do the following:

- Preview the logo on the splash screen.
- Resize image to fit the fixed area of the splash screen.

To apply a new logo the splash screen and the screen saver, follow these steps.

1. Double-click Logo Manager in the control panel.

   The Logo Manager opens with the current logo.

2. Click Load.

3. Select the location of the new image you want to load:
   - A folder on the terminal.
   - Storage Card2 – SD card
   - USB Storage – USB drive

4. Select the image file that you want to load.

5. Verify that the file type is correct.

6. Click OK.
The new logo appears in the Logo Manager dialog box.

7. Check ‘Preview entire screen’ to view the logo on the splash screen. If the logo is truncated or too small, check ‘Stretch/shrink image to fit’ to resize the logo to fit the area.

8. If satisfied with the preview, click Apply. A dialog box confirms that the splash screen was updated. The default screen saver, ssfloat.bmp, is updated with the new image.

9. To close the Logo Manager, click OK, then click Exit.
User Accounts

User Accounts let you configure NT LAN manager (NTLM) user accounts to authenticate client connections when using the FTP, web, and file servers. A user account consists of a user name and a password.

**TIP** NTLM is the security protocol that provides authentication, integrity, and confidentiality to users on Windows operating systems. NTLM is still included to support Windows 2000, 2002, and 2003 server systems.

Follow these steps to add a user account.

1. Double-click User Accounts in the control panel.

2. Click in the user name field and type a name.

3. To clear the field and type a password, click in the Password field.

   Asterisks display as you type the password.

4. Reenter the password in the Confirm pwd field.

5. Click Add User.

6. Click OK to acknowledge the new user account.

   The new user name is added to the list.

7. Repeat steps 1 through 6 to add additional user accounts.
8. When done, click X to close the dialog box.

To remove a user account, follow these steps.

1. Select a name from the user name list.
2. Click Remove User.
3. To confirm the removal of the selected user account, click Yes.

   The user account list is permanently deleted from the list.
4. To close the User Account Manager, click X.

   **TIP** Users who are entered in authentication lists of FTP, web, or file server configurations are removed when user accounts are deleted.
Chapter 4  Windows Operating System

Services

The Services application shows servers the PanelView Plus 7 Standard terminal supports. You can enable (start) or disable (stop) each server.

The buttons are color-coded:

- Green indicates that the server is running and automatically started at system startup.
- Red indicates that the server is not running.
- Gray indicates that the server is not available on the terminal.

To enable or disable a server, press the corresponding button and the color changes accordingly.

Network Server Configuration

The Network Server Configuration application configures settings for VNC, FTP, web, Kepware, and file server activities on an Ethernet network.

VNC Server Configuration

The terminal provides two VNC client viewers:

- Vncviewer.exe is in the /Windows folder on the terminal desktop. You can deploy this viewer to a personal computer to connect to, view, and control a PanelView Plus 7 terminal. See these sections for details:
  - VNC Connection Requiring a Password for View-only Operations on page 99
  - VNC Connection with Separate Passwords for View and Control Operations on page 100
- Another viewer on the terminal lets you establish a VNC connection to another PanelView Plus 7 terminal. To access this viewer, click Start>Programs>VNC Viewer. See these sections for details:
  - Establish a VNC Connection Between a Local Terminal and a Remote Terminal on page 102
  - Close a VNC Connection to a Remote Terminal on page 104
  - Make a New VNC Connection to a Remote Terminal on page 104
  - Transfer Files Between a Local and a Remote Terminal on page 105
The VNC Server tab in the Network Server Configuration dialog box configures settings for a client device to view or control the terminal over a VNC connection.

**VNC Connection Requiring a Password for View-only Operations**

The default VNC configuration enables view-only access to the terminal without requiring a password. This configuration requires the VNC viewer that you copy from your terminal to a computer.

**TIP**  
Copy vncviewer.exe, in the /Windows folder on the terminal, to your computer and install the TightVNC software.

To configure a VNC connection that requires a password to view terminal displays, follow these steps.

1. From the control panel, click Server Config.
2. On the VNC Server tab, check the following:
   - View only (no remote control)
   - Enable security

3. Select View-only password, then enter a seven-character password in the field that opens.

4. Click OK, then restart the server when prompted to apply new settings.

Follow these steps to launch a VNC connection to view terminal operations.

1. On your computer, choose Start>Programs>TightVNC>TightVNC Viewer.

2. Enter the IP address of your terminal and click Connect.

   **TIP** Click the network connection icon in the system tray to view the IP address of the terminal.

3. Enter the View-only password that is defined on the terminal and click OK.

   The PanelView VNC Server opens the current view of the terminal on your desktop. You can view but not control terminal operations.

4. When finished, close the PanelView VNC Server.

**VNC Connection with Separate Passwords for View and Control Operations**

You can configure the VNC server to require separate passwords for view-only and control operations. This example uses the VNC viewer that is deployed to a computer to connect to the terminal.

   **TIP** Copy vncviewer.exe, in the /Windows folder on the terminal, to your computer and install the TightVNC software.
Follow these steps to configure the VNC server to require a separate password for view-only and control operations.

1. From the control panel, click Server Config.

2. On the VNC Server tab, do the following:
   - Clear View only (no remote control).
   - Check Enable security.

3. Select Password, then enter a password for control privileges.
   Passwords are a maximum of seven characters.

4. Select View-only password, then enter a password for view-only privileges.

5. Click OK, then restart the service when prompted to apply new settings.

Follow these steps to launch a VNC connection to enable control of the terminal.

**TIP** To launch a VNC connection on your computer that requires a password for view-only operations, refer to VNC Connection Requiring a Password for View-only Operations on page 99 and follow steps 1 through 4.

1. On your computer, choose Start>Programs>TightVNC>TightVNC Viewer.
2. Click Options.

![Image of Connection Options dialog box]

3. Clear View only (inputs ignored).

4. Click OK.

![Image of View TightVNC Connection dialog box]

5. Enter the IP address of your terminal and click Connect.

   **TIP** Click the network connection icon in the system tray to view the IP address of the terminal.

   The Standard VNC Authentication dialog box opens.

   ![Image of Standard VNC Authentication dialog box]

6. Enter the control password that is defined on the terminal and click OK.

7. On your computer, perform some actions to verify that you have control of the terminal.

8. When finished, close the PanelView VNC Server.

**Establish a VNC Connection Between a Local Terminal and a Remote Terminal**

Follow these steps to establish a VNC connection from a local terminal to a remote terminal.
1. Access the Windows desktop of the local terminal.

2. On the local terminal (viewer) desktop, choose Start>Programs>VNC Viewer.

![New TightVNC Connection](image)

3. Enter the IP address of the remote terminal that you want to connect to and click Connect.

   **TIP** Select an IP address from the pull-down menu, or enter an IP address by using a USB keyboard or soft input panel (see Soft Input Panels on page 84).

A Status message displays while the connection is being made. The messages can cycle as the status changes.

![Status](image)

The message ‘Please wait - initial screen loading’ can also display after the connection has been made and while the desktop of the remote terminal is loading.

After the screen has loaded, the desktop of the remote terminal displays on the local terminal. You can now access the features and functions of the remote terminal.

![Remote Terminal Desktop](image)

The white dotted line indicates the remote terminal and is only for reference (the dotted line does not actually appear on the local terminal).

Note the two Start buttons: circled in white is the remote terminal; circled in black is the local terminal.
Close a VNC Connection to a Remote Terminal

Follow these steps to close a VNC connection between a local terminal and a remote terminal.

1. Establish a VNC connection from a local terminal to a remote terminal (see page 102).

2. On the local terminal, right-click PanelView VNC Server.
   
   **TIP**  Touch the screen for 1 second or longer for a right-click.

3. Click Close.

   The VNC connection to the remote terminal is closed.

   **TIP**  To toggle between the remote terminal (server) and local terminal (viewer) views, click PanelView VNC Server.

Make a New VNC Connection to a Remote Terminal

To make a new VNC connection to another terminal, follow these steps.

1. Establish a VNC connection from a local terminal to a remote terminal (see page 102).

2. Click the New connection icon in the menu bar.

3. Enter the IP address of the new remote terminal that you want to connect to and click Connect.
   
   **TIP**  Select an IP address from the pull-down menu, or enter an IP address by using a USB keyboard or soft input panel on the local terminal (viewer) (see Soft Input Panels on page 84).

   The local terminal creates a VNC connection to the new terminal.
Transfer Files Between a Local and a Remote Terminal

Use the TightVNC File Transfer dialog box to perform these tasks:

- Transfer files and folders between connected terminals
- Rename a selected file or folder
- Create a folder
- Delete a selected file or folder

To transfer files between the local terminal and the remote terminal, follow these steps.

1. Establish a VNC connection from a local terminal to a remote terminal (see page 102).
2. Click the Transfer files icon in the menu bar.
3. Select the folder or files that you want to transfer.
4. Click the upload (>>) or download (<<) files icon.
5. Click Yes.
6. To view the change (if needed), click Refresh.
Web Server Configuration

The web server tab in the Network Server Configuration application configures settings that are used for HTTP web activities. These settings are standard Microsoft Windows CE parameters.

**TIP** To apply new settings, click OK in the title bar of the dialog box. You are asked if you want to restart the service immediately.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>Admin Users</td>
<td>Specifies a list of users who are allowed to administer web activities. When selected, enter a list of user names, which are separated by semicolons, in the field that opens at the bottom of the dialog box.</td>
<td>ADMIN</td>
</tr>
<tr>
<td>Basic Authentication</td>
<td>To require a user name and password to access the web server, check this option.</td>
<td>Disabled (unchecked)</td>
</tr>
<tr>
<td>Default Web Page</td>
<td>Specifies default web pages that you can access.</td>
<td>default.htm; index.htm</td>
</tr>
<tr>
<td>Allow Directory Browsing</td>
<td>To browse directories on a web server, check this option.</td>
<td>Disabled (unchecked)</td>
</tr>
<tr>
<td>Max Connections</td>
<td>Specifies the maximum number of incoming web connections.</td>
<td>256</td>
</tr>
<tr>
<td>Log File Directory</td>
<td>Specifies the path where the log file is stored. This file logs web activity.</td>
<td>\windows\www</td>
</tr>
<tr>
<td>Max Log Size</td>
<td>Specifies the maximum size of the log file that is stored in the log file directory. A new log file is created, when the current log file reaches its maximum size.</td>
<td>32768 bytes</td>
</tr>
<tr>
<td>NTLM Authentication</td>
<td>To require a valid user name and password to access the web server, check this option. If NTLM Authentication is enabled, you must enter a valid user name in the Admin Users field. NTLM user accounts are defined in the User Account Manager of the control panel.</td>
<td>Enabled (checked)</td>
</tr>
</tbody>
</table>
FTP Server Configuration

The FTP Server tab in Network Server Configuration defines settings that are used to exchange files over a network. These settings are standard Microsoft Windows CE parameters.

The default FTP configuration lets you establish an FTP connection to the terminal, log in anonymously, and download files from the FTP default directory (\Temp).

**TIP** To apply new settings, click OK in the title bar of the dialog box. You are asked if you want to restart the service immediately.

### Table 26 - FTP Server Parameters

<table>
<thead>
<tr>
<th>FTP Parameters</th>
<th>Description</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>General</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Default Directory</td>
<td>Specifies a storage location on your terminal where you can transfer files. This location is the directory that users come to when they first connect to the FTP server.</td>
<td>\Temp</td>
</tr>
<tr>
<td>Idle Timeout</td>
<td>Specifies an idle period after which inactive control connections are closed during a data transfer. An FTP session requires one control connection, plus one data connection, during file transfers. Without a timeout, the FTP server process can be left pending indefinitely if the corresponding client crashes without closing the control connection.</td>
<td>300 seconds (5 minutes)</td>
</tr>
<tr>
<td>Debug Output Channels</td>
<td>Specifies the number of debug output channels.</td>
<td>2</td>
</tr>
<tr>
<td>Debug Output Mask</td>
<td>Specifies the port number of the output mask that is used for debugging.</td>
<td>23</td>
</tr>
<tr>
<td>Base Directory</td>
<td>Specifies the path where the FTP log file and other support files are stored.</td>
<td>\Windows</td>
</tr>
<tr>
<td>Log Size</td>
<td>Specifies the maximum size of the file that logs FTP activities. The log file is stored in the base directory. A new log file is created, when the current log file reaches its maximum size.</td>
<td>4096 bytes</td>
</tr>
<tr>
<td><strong>Security Parameters</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Use Authentication</td>
<td>To require a valid NTLM user name and password to access the FTP server, check this option. If authentication is enabled, you must enter one or more valid user names in the User List field. NTLM user accounts are defined in the User Account Manager of the control panel.</td>
<td>Enabled (checked)</td>
</tr>
<tr>
<td>Allow Anonymous Logins</td>
<td>To let anyone connect to the FTP server, check this option. Anonymous logins do not require a user name and password.</td>
<td>Enabled (checked)</td>
</tr>
<tr>
<td>Allow Anonymous Uploads</td>
<td>To let users logged in anonymously to upload (or write) files to the FTP server (or default directory), check this option. If unchecked, users logged in anonymously can download (or copy) files from the server.</td>
<td>Disabled (unchecked)</td>
</tr>
<tr>
<td>Allow Anonymous VRoots</td>
<td>To let users logged in anonymously to access virtual roots, check this option.</td>
<td>Disabled (unchecked)</td>
</tr>
<tr>
<td>User List</td>
<td>Specifies the NTLM users that can access the FTP server and exchange files to or from the default directory. When selected, you can enter a list of NTLM user names, which are separated by semicolons, in the field that opens at the bottom of the dialog box. User names and passwords are defined in the User Account Manager of the control panel.</td>
<td>None</td>
</tr>
</tbody>
</table>
**FTP Anonymous Login and Upload**

Use the default FTP security options to log in anonymously to the terminal and copy files between your computer and the default FTP folder on the terminal.

To establish an FTP connection to the terminal by using anonymous logins and file transfers to and from the FTP folder, follow these steps.

1. On your computer, open the web browser or any folder.
2. Determine the IP address of your terminal by clicking the Network Connection icon in the system tray.
3. Type the terminal IP address in the address field.

A connection is established to the \Temp folder, the default FTP directory on the terminal. The terminal shows two files.

**TIP** If Allow Anonymous Uploads is unchecked, you can copy files from the default FTP folder on the terminal but not to the folder.

If you launch the FTP connection from your web browser, this view can appear.

To see the folder view, choose Open FTP site in Windows Explorer from the Page pull-down menu.
4. Transfer files between your computer and the FTP folder on the terminal:
   - Drag or copy a file from the FTP folder to your computer.
   - Drag or copy a file to the FTP folder from your computer.

FTP Connection Requiring User Authentication

You can require a user name and password before establishing an FTP connection. On the FTP Server tab, check Use Authentication. Select User List and enter a valid user name in the field that opens at the bottom of tab.

To establish an FTP connection to the terminal by entering a valid user name and password, follow these steps.

1. On your computer, open any folder or the browser.
2. Determine the IP address of your terminal by clicking the Network Connection icon in the system tray.
3. Type the terminal IP address in the Windows Explorer address field.
4. Click OK if the FTP Folder Error dialog box appears.
5. From the File menu, choose Login As.

TIP User names and passwords are configured in the User Accounts application of the control panel. Refer to User Accounts on page 96 for details.

EXAMPLE Use this syntax for the IP address:
For example, ftp://192.168.124.96

TIP The user name must be in the User List of the FTP configuration and previously configure as a valid account in the User Accounts application.
6. Type a valid user name and password, then click Log On.
   The default FTP directory on the terminal opens. You can transfer files to or from this folder.

File Server

The File Server tab in Network Server Configuration has settings that allow shared access to files, printers, serial ports, and miscellaneous communication between computers on a network. These settings are standard Microsoft Windows CE parameters.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>General</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Adapter List</td>
<td>Provides a list of valid adapters.</td>
<td>* (all adapters)</td>
</tr>
<tr>
<td>Max Printer Swap Size</td>
<td>Specifies the maximum size of the printer swap file.</td>
<td>4096 bytes</td>
</tr>
<tr>
<td>Security Options</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Use Authentication</td>
<td>To require a valid NTLM user name and password to access the file server, check this option. If authentication is enabled, you must enter one or more valid user names in the User List field. NTLM user accounts are defined in the User Account Manager of the control panel.</td>
<td>Disabled (unchecked)</td>
</tr>
<tr>
<td>User List</td>
<td>Specifies a list of valid NTLM users who are allowed to access the file server. When selected, you can enter a list of NTLM user names, which are separated by semicolons, in the field that opens at the bottom of the dialog box. User names and passwords are defined in the User Account Manager of the control panel.</td>
<td>None</td>
</tr>
</tbody>
</table>

TIP To apply the new settings, click OK in the title bar of the dialog box. You are asked if you want to restart the service immediately.
**KEPServer Configuration**

The Kepware Server tab in Network Server Configuration lets you select Kepware communication drivers for connected devices.

**TIP**     For a complete list of KepWare drivers, go to [http://www.rockwellautomation.com/knowledgebase](http://www.rockwellautomation.com/knowledgebase) and search the Knowledgebase for keywords ‘KepWare Drivers for PanelView Plus’.

**System Information**

The System Information application provides tabs to view and set system-wide properties for your terminal.

**General Information**

The General tab of System Information shows the current version of the Windows CE operating system, the processor type, speed, and available memory.

**Startup Options**

The Startup Options tab of System Information lets you set these start-up options:

- Show or hide the battery warning
- Launch the terminal as open or closed
- Disable or enable Safe mode
• Configure the Ethernet ports for DLR, star, or linear topology
• Show or hide system watchdog errors

Battery Warnings

If the battery is low, missing, or depleted, a warning appears each time that the terminal starts up.

**TIP**
- The terminal can operate without a battery if the accuracy of the date and time is not critical.
- When replacing the battery, you can verify the accuracy of the system date and time from the desktop control panel or the terminal settings in FactoryTalk View ME Station.

You have three options for handling the battery.

<table>
<thead>
<tr>
<th>Battery Warning Startup Options</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Always show at startup (continue with startup)</td>
<td>Shows the battery warning at startup with FactoryTalk View ME Station software that runs behind it. This option is the default.</td>
</tr>
<tr>
<td>Always show at startup (halt startup)</td>
<td>Shows the battery warning at startup but halts the startup or boot process until you press OK.</td>
</tr>
<tr>
<td>Never show at startup</td>
<td>Hides the battery warning at startup.</td>
</tr>
</tbody>
</table>

**Startup Options**

To launch an open or closed desktop at startup and to set the visual appearance of button controls, use the Shell options.
### Boot Option

The boot options provide a way for you to enter Safe mode at startup.

<table>
<thead>
<tr>
<th>Shell Startup Options</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Type</td>
<td>Launches the terminal as an open or closed system at startup:</td>
</tr>
<tr>
<td></td>
<td>- (Open system) – launches the Windows CE desktop on startup.</td>
</tr>
<tr>
<td></td>
<td>- (Closed system) (default) – launches FactoryTalk View ME Station</td>
</tr>
<tr>
<td></td>
<td>Configuration mode on startup.</td>
</tr>
<tr>
<td></td>
<td>You can also allow or restrict desktop access within FactoryTalk View ME</td>
</tr>
<tr>
<td></td>
<td>Station Configuration mode by pressing Terminal Settings&gt;Desktop</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>User Interface Button Controls</th>
<th>Sets the visual appearance of control buttons at startup:</th>
</tr>
</thead>
<tbody>
<tr>

<td>Displays a small white box in the lower left corner of the terminal display</td>
</tr>
<tr>
<td></td>
<td>during startup. To enter Safe mode, press and hold the white box. This</td>
</tr>
<tr>
<td></td>
<td>option lets you bypass a loaded FactoryTalk View ME application and go</td>
</tr>
<tr>
<td></td>
<td>directly to Configuration mode. If you do not press the white box, the</td>
</tr>
<tr>
<td></td>
<td>system boots up normally.</td>
</tr>
<tr>
<td></td>
<td>Another way to enter Safe mode is to access Maintenance mode. See</td>
</tr>
<tr>
<td></td>
<td>Maintenance Mode Operations on page 145.</td>
</tr>
</tbody>
</table>

### Configure the Ethernet Ports

The ‘Network (On-board Embedded Ethernet Switch - DLR)’ provides options to configure the onboard Ethernet switch of the terminal for the network topology. You can also configure the Ethernet ports from the terminal menus. See Configure the Ethernet Ports on page 58.

After changing the selections, restart the terminal for the changes to take effect.
Watchdog Errors

You can show or hide watchdog errors at startup.

<table>
<thead>
<tr>
<th>Watchdog Error Options</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Always show watchdog errors at startup</td>
<td>Shows the fatal watchdog error (error 02) at startup and halts the normal boot process. This option is the default. The system launches the maintenance window with the watchdog error displayed. You can continue booting from this window. Refer to Maintenance Mode Operations on page 145 for details. The error is logged to the System Event log.</td>
</tr>
<tr>
<td>Never show watchdog errors at startup</td>
<td>Hides the errors at startup and adds the error to the system event log.</td>
</tr>
</tbody>
</table>

Advanced Diagnostics

Advanced diagnostics are for technical support use to diagnose and resolve system errors. They are not for use in a normal production environment.

Device Name

The Device Name tab of System Information identifies your terminal to other devices on the network by providing a device name and description.
Touch Properties

Touch Properties is accessible on devices with a touch screen. It lets you calibrate the touch screen and set the sensitivity of touch screen taps.

Calibration

If your device is not responding appropriately to taps, the Calibration tab lets you recalibrate the touch screen. To recalibrate, follow the instructions in the dialog box.

Double-Tap

The Double-Tap tab lets you set and test the double-tap sensitivity of the touch screen taps.
PDF Reader

The PDF reader provides typical view and search functions. You can run this reader from the Windows desktop or a command prompt.

When viewing a PDF document, you can initiate functions from the menu or toolbar. Bookmarks created in the original PDF appear under bookmarks.

**Figure 7 - PDF Reader Workspace**

Some viewing functions can be initiated on touch screen terminals with a touch or drag.

**Table 28 - Touch Screen Operations**

<table>
<thead>
<tr>
<th>To</th>
<th>Do This</th>

<td>Drag in a circular, clockwise or counterclockwise direction to rotate the page.</td>
<td>![Rotate Indicator]</td>
</tr>
</tbody>
</table>
Command Prompt Parameters

You can run the PDF reader from the Windows Command Prompt when you choose Start>Programs>Command Prompt and execute the command parameters in Table 29.

Command Prompt Syntax

Foxitreader “file_path/file-name.pdf” parameter parameter_value

- To separate the file path directories and file name, enclose the file path and file name in double quotes and use forward slashes.
- To separate the parameter from the file name and optional parameter value, use spaces.

Command Prompt Example

Foxitreader “windows/desktop/example.pdf” -p 4.

This command prompt opens example.pdf in Foxit Reader at page 4.

Table 29 - Command Prompt Parameters

ATTENTION: Prevent Electrostatic Discharge (ESD)

This equipment is sensitive to electrostatic discharge that can cause internal damage and affect normal operation.

Follow these guidelines when you handle this equipment:

- Touch a grounded object to discharge potential static.
- Wear an approved grounding wriststrap.
- Do not touch connectors or pins on component boards.
- Do not touch circuit components inside the equipment.
- Use a static-safe workstation, if available.
- Store the equipment in appropriate static-safe packaging when not in use.

ATTENTION: Shock Hazard

Disconnect all power before installing or replacing any components. Failure to disconnect power can result in electrical shock or damage to the terminal.

At the end of its life, collect this equipment separately from any unsorted municipal waste.

TIP For a complete list of supported devices, go to http://www.rockwellautomation.com/knowledgebase and search the Knowledgebase for keywords 'PanelView™ Plus Hardware Compatibility List'.

Rockwell Automation Publication 2711P-UM007F-EN-P - February 2020 119
Connect to USB Ports

Each terminal has one USB 2.0 (type A) host connection and one USB 2.0 (type B) device connection:

- The USB host connection supports removable USB drives and a USB printer.

**IMPORTANT** Refer to Considerations for Mounting on page 24 for information on how to use the USB host ports and USB peripheral devices in hazardous locations.

- The USB device connection supports a connection to a host computer.

**IMPORTANT** The USB host and device connections are intended for temporary use. Do not use the USB host and device connections for runtime operations.

Icons identify the USB host connections. The USB host connection supports 0.5A at 5V DC. Connected USB devices must not exceed this power load.

| Table 30 - USB Connector Pinout |
|-----------------|-----------------|--------------|-----------------|
| USB Port       | Icon            | USB Connector | Pin | Signal | Description |
| Host           | USB Device      | Host 1        | 1   | VCC    | +5V          |
|                | Host            | 2             | 2   | D-     | Data -       |
| Device         |                | Host          | 3   | D+     | Data +       |
|                | USB Host        | Host          | 4   | GND    | Ground       |

**WARNING:** USB devices that are not powered by the USB port must be within the same enclosure as the terminal. The USB devices must be connected to a ground system common with the terminal or used with a USB hub that provides galvanic isolation.
Connect only externally powered USB hubs to the terminal that are USB 2.0 compatible. Before you attach devices to a USB hub, make sure that the power adapter is connected and powered on.

**USB Cables**

Use high-speed, USB 2.0 certified cables for error-free transmissions.

**Install a USB Printer**

The terminal supports the connection of one USB printer such as Canon, Epson, Hewlett-Packard, and Brother. The printers support plug-and-play installation and manual installation if a suitable driver is available. You can connect a printer to a USB port on the terminal.

**TIP** For more information on supported printers, go to [http://www.rockwellautomation.com/knowledgebase](http://www.rockwellautomation.com/knowledgebase) and search the Knowledgebase for keywords ‘Printers Supported on PanelView Plus’.

Printers are configured and managed from the Printers application in the desktop control panel. A wizard is supported for each printer type.

<table>
<thead>
<tr>
<th>Printer Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Local USB</td>
<td>You can connect a JETCET-supported printer to a USB host port. The printer that is attached to the USB host port can be shared by a remote terminal when configured as a network printer on the remote terminal.</td>
</tr>
<tr>
<td>Network</td>
<td>The terminal supports a remote printer that is connected to the network via the Ethernet port. The printer address can be its device name or IP address.</td>
</tr>
<tr>
<td>RDP /ICA</td>
<td>A local printer can be made available to a Windows server application that is running in a remote desktop protocol (RDP) session on the terminal.</td>
</tr>
</tbody>
</table>

After configuring a printer, you can access it from desktop applications or from FactoryTalk® View ME Station. Press Terminal Settings, then choose Print Setup. Applications can also select and share printers.

**Plug-and-Play Installation**

Follow these steps to install a plug-and-play printer from the Windows desktop. For manual printer installation, refer to Manual Printer Installation on page 123.

**TIP** This procedure shows a plug-and-play installation for the Hewlett Packard HP deskjet 5650 printer.

1. Connect the printer to a USB host port on the terminal.
2. Plug the power cord of the printer into an outlet and turn on the printer.
Windows automatically detects your plug-and-play printer, and in most cases, without requiring you to make any selections. The printer is ready to print.

**IMPORTANT** If automatic plug-and-play installation is not supported for a printer, the error is logged to the System Event log in the Hardware Monitor. For example: JETCET PRINT was unable to auto-configure printer. To configure the printer manually, go to the Printers folder from the Control Panel.

3. Verify printer installation from the desktop control panel by opening the Printers application.

Notice the icon for the Deskjet 5650C printer. The check mark indicates that this printer is the default printer.

4. From the File menu, choose Properties to view the properties of the printer.

![Printer Properties](image)

Printer properties include the printer name, manufacturer and model, print driver, and port-specific parameters.

**TIP**

- New printer configurations are retained through a power cycle.
- Printers that are configured through the desktop control panel are also available within FactoryTalk View ME Station when pressing Terminal Settings>Print Setup.

5. To verify the installation, right-click the printer and print a test page.

When printing from an application such as WordPad, a Print dialog box opens where you can adjust settings.
Install and Replace Components  Chapter 5

Manual Printer Installation

Follow these steps to install a supported printer manually.

1. Connect the printer to a USB port of the terminal.
2. Plug the power cord of the printer into an outlet and turn on the printer.
3. From the desktop control panel, open Printers.
4. Click Add Local Printer.
5. Follow the Add Local Printer Wizard instructions to configure the printer:
   a. Verify that the connected printer appears on the USB printer port.
   b. Select the manufacture and model of the JETCET printer.
   c. Accept the default printer name or enter another.
   d. To verify the installed printer, print a test page.
   e. Specify whether you want the printer to be shared on the network.

Insert an SD Card

An SD card provides extra storage when inserted into the SD card slot of the terminal. Supported cards include catalog numbers 1784-SD1 and 1784-SD2. The SD cards are hot-swappable; they can be inserted and removed while the terminal is powered on and in operation.

WARNING: EXPLOSION HAZARD

If you remove or insert an SD card while the power is on, an electric arc can occur. This action can cause an explosion in hazardous location installations. Do not remove and insert the SD card unless power has been removed or the area is known to be nonhazardous. For ATEX and hazardous location installations, the SD card cover must be installed.
The SD card slot is accessible from the inside or back of the panel when the operator terminal is installed.

Follow these steps to install an SD card in the card slot.

1. Remove the protective cover from the card slot.
2. Verify that the SD card is locked or unlocked according to your preference.
   - If unlocked, the terminal can write data to or read data from the card.
   - If locked, the terminal can only read data from the card.

ATTENTION: Orient the SD card correctly before inserting into slot. If you force the card into the slot, you can damage the card or the terminal.

3. Insert the SD card firmly into the slot.

To remove the card, grasp the end of the card and pull it out.

4. Attach the protective cover over the card slot (the protective cover is shipped with the terminal).
Replace the Battery

The product has a lithium battery that provides backup power for the real-time clock and static RAM. The battery can be replaced while the product is mounted in the panel. No special tools are required to replace the battery.

ATTENTION: The cover is required to secure the card in high-shock and vibration environments. It also prevents ESD discharge to the card during runtime operation.

**Replace the Battery**

1. Disconnect power from the terminal.
2. Remove the battery cover by rotating it from the C (closed) to the O (open) position.

Perchlorate material – special handling may apply. See [www.dtsc.ca.gov/hazardouswaste/perchlorate](http://www.dtsc.ca.gov/hazardouswaste/perchlorate).

This perchlorate warning only applies to primary Lithium Manganese Dioxide (LiMnO$_2$) cells or batteries, and products containing these cells or batteries, sold or distributed in California, USA.

Follow these steps to replace the battery.

1. Disconnect power from the terminal.
2. Remove the battery cover by rotating it from the C (closed) to the O (open) position.
3. To disengage the battery, on the metal latch, press the vertical center tab away from the battery.

The battery is released.

4. Insert the new battery at an angle under the metal latch, with the positive polarity (+) up.

5. Gently press down on the opposite side of the battery until it locks into place.

**IMPORTANT** Make sure that the battery is fully inserted under the plastic tabs. If the battery is not fully inserted, the terminal can be damaged.

6. Replace the battery and rotate the cover from the O (open) to the C (closed) position.
Install a Protective Overlay

The overlay protects the terminal touch screen from scratches, dust, fingerprints, and external damage from chemicals or abrasive materials. See Table 4 on page 17 for a list of available protective overlays.

The protective overlay covers the entire surface of the terminal bezel inside the plastic perimeter. The overlay has a protective liner that is removed by pulling back on the tab. Do not remove the liner until you are ready to install the overlay.

**IMPORTANT** Follow these precautions when installing the protective overlay:

- Make sure that your hands are clean and dry.
- Handle the overlay by its edges. If you get marks or lint on the overlay, remove them before proceeding.
- Do not touch the adhesive ring.

Before installing the overlay, use a lint-free cloth and a mild glass cleaner to clean the touch screen surface. Remove all fingerprints, grease, or dust. Marks not removed are trapped underneath the overlay. Grease also affects the adhesion of the overlay.

To apply the protective overlay, follow these steps.

1. Disconnect power from the terminal.
2. Pull the tab from one of the short sides and partially peel the liner away from the adhesive layer.
Hold the peeled back portion of the protective liner out of the way as you perform the next step.

3. Center the overlay over the bezel and carefully position the adhesive surface on the terminal.
   While the protective liner is still covering the rest of the overlay, verify that it is properly centered.

4. To press the overlay on the screen, slowly peel off the rest of the liner while using a soft cloth.
   Make sure that the overlay lies flat with no bubbles or warps.

5. With a soft cloth or finger, press around the edges of the overlay to seal it, and remove any air bubbles trapped in the adhesive.

**Clean the Overlay**

To clean the overlay, use a clean, lint-free cloth, and a mild glass cleaner that leaves no streaks. Windex or an eye glass cleaner is recommended. Do not use cleaners that contain abrasives.

**Remove the Overlay**

Remove the overlay if it is damaged or needs replacement. Lift a corner and slowly pull off the overlay. To remove any residual adhesive, use isopropyl alcohol. Do not reuse the overlay.
Chapter 6

Update Firmware

Terminal Firmware

Firmware components are packaged as execute-in-place (XIP) regions in one system code (SC) .img file. When the SC .img file is copied to the virtual file system (VFS) on the terminal, the XIP regions are updated and the terminal restarts automatically. These firmware components are affected during an upgrade:

- FactoryTalk® View ME Station software
- Communication protocols and drivers including Kepware drivers
- Windows fonts
- Windows CE components
- FactoryTalk components
- User extensions

A firmware update does not affect these terminal components or settings:

- Windows registry
- File system including the FactoryTalk View ME application that is loaded\(^{(1)}\) in the terminal
- Network parameters including the network device name, DHCP-enabled and static\(^{(2)}\) IP addresses, speed, and duplex setting
- Display settings
- Screen saver configuration
- Touch screen calibration

\(^{(1)}\) In some cases, the FactoryTalk View ME application can be missing after a firmware update.
\(^{(2)}\) In some cases, static IP addresses have been changed to DHCP-enabled IP address after a firmware update.
Download Firmware Files

Download the appropriate firmware installation package from the Rockwell Automation Product Compatibility and Download Center. The package is named:

\[ \text{PVP7}_{<\text{terminal family}>}_{x.xx-yyyymmdd}.exe, \] where:

- \(<\text{terminal family}>\) is the name of the terminals
- \(x.xx\) is the FactoryTalk View ME software version that is contained in the package
- \(yyyymmdd\) is the date that the package was created

This installation package contains the following items:

- Firmware upgrade package (FUP) contains an autorun executable and the new firmware files.
- Firmware upgrade wizard (FUW), version 6.10 or later, is used to upgrade the terminal firmware by using the contents of the FUP.

The FUP and FUW are copied to your computer during the download.

Follow these steps to download firmware installation files to your computer.

1. From the Quick Links list on http://www.ab.com, choose Product Compatibility and Download Center.
2. Click the Get Downloads tab.
3. Click Find Product Downloads.
4. From the All Families pull-down menu, choose PanelView® Plus 7.
5. Select a firmware version, then click Downloads.
6. Download the upgrade file (.exe) to a temporary folder on the same drive as FactoryTalk View ME (ME) software.
7. Run the upgrade file (.exe) installation procedure:
   - The FUW is installed in the FactoryTalk View ME folder.
   - The firmware upgrade package (.FUP) file is installed into the folder that is specified during the installation procedure.

   **TIP** The FUP name is \(\text{ME}_\_\text{PVP7xA}_6=7.xx-yyyymmdd\)
   - \(yyyymmdd\) is the date the firmware package was created
   - \(7.xx\) is the version of ME contained in this package

You are now ready to run the FUW to upgrade the terminal firmware from a USB drive or SD card, or by using a network connection.
Firmware Upgrade Wizard

The firmware upgrade wizard (FUW) is used to upgrade the terminal firmware. Two methods are provided for upgrading the firmware:

- Create a firmware upgrade card with the contents of the FUP file that you can then load in the terminal to upgrade the firmware.
  
  The firmware upgrade card can be a USB drive or an SD card, catalog number 1784-SDx.

- Upgrade firmware in a terminal that is connected to a computer over a direct network connection. The network connection requires a computer running RSLinx® Enterprise software, version 5.0 or later. In the RSLinx Enterprise software, you select the terminal that you want to upgrade.

You can run the FUW from within FactoryTalk View Studio software or from the Programs menu on your computer:

- In FactoryTalk View Studio software, from the Tools menu, choose Firmware Upgrade Wizard.
- Choose Start>Programs>Rockwell Software>FactoryTalk View>Tools>ME Firmware Upgrade Wizard.

Upgrade the Terminal Firmware from a Storage Device

To upgrade firmware from a storage device, you follow a two-step process. First, you create a firmware upgrade card with the required firmware files. Second, you load the card in the target terminal to upgrade the firmware.

The firmware upgrade card can be a USB drive or an SD card.

Create a Firmware Upgrade Card

Follow these steps to copy firmware files to a USB drive or SD card.

1. Insert either a USB drive or an SD card into the appropriate slot on your computer.

2. Run the Firmware Upgrade Wizard:
   - In FactoryTalk View Studio software, from the Tools menu, choose Firmware Upgrade Wizard.
   - Choose Start>Programs>Rockwell Software>FactoryTalk View>Tools>ME Firmware Upgrade Wizard.

3. Follow these steps from the initial Firmware Upgrade Wizard dialog box.
   a. Click Create firmware upgrade card.
b. Select the location of the firmware card by browsing to the root directory of the storage card that is loaded in your computer for example E:\.

   The firmware files are copied to this location. You can also specify a folder on the hard disk.

c. From the Existing terminal type pull-down menu, select a PanelView Plus 7 terminal.

d. Click Next.

4. Follow these steps from this dialog box.
   a. Browse to the location of the firmware source files on your computer, where the FUP was installed.

   b. Choose the firmware version for the upgrade.

   c. Click Next.

   It can take several seconds for the next dialog box to appear while the FUP is being retrieved.

5. From this dialog box, optionally select the KEPServer drivers that you want included with the firmware, then click Next.
Kepware drivers are already installed on the PanelView Plus 7 Standard terminals.

The final dialog box summarizes your choices for creating the firmware upgrade card.

6. Click Finish to copy the firmware files to the firmware upgrade card.

A progress bar automatically updates as files are copied to the USB drive or SD card.

7. Click OK when the firmware upgrade completes successfully.

8. Remove the USB drive or SD card from your computer.

9. To use this firmware upgrade card to upgrade the terminal firmware, go to the next section.
Upgrade Terminal Firmware by Using a Firmware Upgrade Card

Follow these steps to transfer firmware files from the USB drive or SD card to the terminal. Use the firmware upgrade drive or card that you created in the previous section.

**IMPORTANT**
- Do not remove or disconnect the USB drive or SD card while a firmware upgrade is in process. If you do, you can corrupt the firmware and make the terminal unstable.
- Do not power off the terminal during a firmware upgrade.
- USB hubs can produce unexpected behavior and are not recommended.

1. Insert the USB drive or SD card into the appropriate slot on your terminal.
   The firmware upgrade automatically starts and displays this dialog box.

   ![Firmware Upgrade Card]

2. Press Upgrade or [F7] on the terminal to start the firmware upgrade.
   The terminal restarts and displays a progress bar during the upgrade.
   When the upgrade is complete, the terminal restarts and executes the new firmware.

3. Remove the USB drive or SD card from the terminal.

**IMPORTANT** If the firmware upgrade fails because of a power loss or the firmware upgrade card is inadvertently removed, you can restore the terminal to the factory default firmware. See Maintenance Mode Operations on page 145 for details on how to restore the factory default settings.
Upgrade Terminal Firmware over the Network

You can upgrade firmware in a terminal that is connected to a computer over a direct network connection. The network connection requires a computer that is running the firmware upgrade wizard (FUW) and RSLinx Enterprise software, version 5.0 or later.

RSLinx Enterprise software is required so that you can select the terminal on the network.

Follow these steps to copy firmware files to the terminal over a network by using RSLinx Enterprise software and Ethernet communication.

1. Run the Firmware Upgrade Wizard:
   - In FactoryTalk View Studio software, from the Tools menu, choose Firmware Upgrade Wizard.
   - Choose Start>Programs>Rockwell Software>FactoryTalk View>Tools>ME Firmware Upgrade Wizard.

2. Click ‘Upgrade firmware on terminal’ and click Next.

3. To continue, click Yes.

It is not necessary to back up files on PanelView Plus 7 Standard terminals.
Chapter 6  Update Firmware

4. Click ‘Network connection (using RSLinx Enterprise)’ and click Next.

   ![Network connection selection window]

   This option is the only valid selection for PanelView Plus 7 Standard terminals.

5. To receive the firmware update, select the terminal and click Next.

   ![Terminal selection window]
6. Follow these steps from this dialog box.

![Firmware Upgrade Wizard](image)

- **a.** Browse to the location of the firmware source files on your computer, where the FUP was installed.
  The default location is shown.
- **b.** Choose the version of the upgrade firmware from the pull-down menu.
- **c.** Click Next.
  It can take several seconds for the next dialog box to appear while the FUP is being retrieved.

7. From this dialog box, optionally select the KEPServer drivers that you want included in the firmware, then click Next.

![Select KEPServer drivers](image)

Kepware drivers are already installed on the PanelView Plus 7 Standard terminals.
Chapter 6  Update Firmware

The final dialog box summarizes your choices for upgrading the terminal firmware.

The terminal is about to be updated with new firmware. Factory all, new ME Station and any running applications will be terminated. After downloading files, the terminal will be restarted to complete the upgrade. Do you wish to continue?

8. Click Finish to update the firmware in the terminal.

9. To continue with the update, click Yes.

A progress bar updates as firmware files are copied to the terminal.

10. Click OK when the firmware upgrade is complete.

The terminal restarts and executes the new firmware.

**IMPORTANT**  If the firmware upgrade fails because of a power loss or the firmware upgrade card is inadvertently removed, you can restore the terminal to the factory default firmware. See Maintenance Mode Operations on page 145 for details on how to restore the factory default settings.
Chapter 7

Troubleshooting

View System Information

View system information for the terminal from FactoryTalk® View ME Station runtime or from the Hardware Monitor in the control panel.

Follow these steps to view system information for the installed components.

1. Access FactoryTalk View ME Station runtime.
2. Tap Terminal Settings, then choose System Information> About FactoryTalk View ME Station.
Status Indicators

The back of the terminal has two indicators to identify system status:
- STS indicator (green) indicates that the terminal is on and running
- ERR indicator (red) indicates hardware and firmware faults

At startup, the STS and ERR indicators flash on and off, then the STS indicator flashes to signal progress during startup. If the indicators remain off, check the power cable.

After a successful startup, the STS indicator remains on.

The table shows indicator states if the terminal stops during startup.

<table>

</tr>
</tbody>
</table>
Display Issues

The display is unreadable or dims unexpectedly.

**ATTENTION:** If the display darkens, or if the backlight is not functioning properly, the screen can be difficult to read and use of this touch screen could result in a potentially hazardous outcome. **Do not use the touch screen under these circumstances.** The design of the system must take into account the possibility of the touch screen losing functionality and unable to be used to maintain or change control of the system. The touch screen shall not be the single point of control of critical functions and is not intended to replace an E-stop.

Design of the system should follow all applicable code and good engineering practice. Factors to consider include:

- The possibility of an unreadable touch screen
- The possibility of an inoperable touch screen
- Unexpected communication errors or delays
- Operator error in the control of the system
- Proper use of E-stops and other safety practices

The user shall provide means to achieve a safe state during anomalies and make sure the system has adequate redundancy for critical functions.

**Failure to follow these instructions can result in death, serious injury, or equipment damage.**

---

**Table 36 - Dim Display**

<table>
<thead>
<tr>
<th>Check For</th>
<th>See These Pages</th>
</tr>
</thead>
<tbody>
<tr>
<td>Low display brightness setting</td>
<td>page 63 or page 90</td>
</tr>
<tr>
<td>Low brightness level of screen saver</td>
<td>page 64 or page 91</td>
</tr>
<tr>
<td>Temperatures outside the operating range</td>
<td>page 72 or page 93</td>
</tr>
</tbody>
</table>

**TIP** Extend the life of the backlight by reducing the display brightness, by using the screen saver with reduced brightness, or operating at lower temperatures.
Ethernet Issues

See Figure 37 on page 143 for tips on how to isolate Ethernet anomalies.

**Table 37 - Ethernet Connection Issues**

<table>
<thead>
<tr>
<th>Check for These Issues</th>
<th>What to Do</th>
</tr>
</thead>
</table>
| Status of invalid Ethernet connection       | • Green indicator is on when a link is established.  
                                          | • Yellow indicator blinks when activity is detected.  
                                          | • Verify network connections.                     |
| Poor cable connections                      | Check the Ethernet cabling for the following:   |
                                          | • Make sure that cables are fully connected.      |
                                          | • Check for cable crimping.                       |
                                          | • Check the Ethernet switch connections.          |
                                          | • Check the Uplink ports.                         |
| Invalid IP address of terminal              | Go to Set the Ethernet Address of the Terminal on page 57. |
                                          | If DHCP is enabled, the terminal automatically acquires a valid IP address from the network after startup. The TCP/IP protocol automatically assigns 169.254.xxx.xxx when it fails to acquire an IP address from the network. In general, an IP address that begins with 169 does not support a network connection.  
| Conflicting IP addresses                    | If DHCP is not enabled and a static IP address is specified, make sure that the IP address does not conflict with the address of another device on the network. |

Performance Is Slow

If the response time of the application is slow, for example screen changes or text display changes, check for the following issues:

- Application screens contain too many elements.
- If the controller is programmed for feedback, it can cause delays.
- Slow network performance or noise can result in retries.

Resistance to Chemicals

The outer surfaces of the terminal including the bezel, touch screen overlay, and panel sealing gasket are tested for chemical resistance. Some of the chemicals can cause discoloration, but they do not interfere with the operation of the terminal.

**TIP** For more information on chemical resistance of the product, go to [http://www.rockwellautomation.com/knowledgebase](http://www.rockwellautomation.com/knowledgebase) and search the Knowledgebase for keywords ‘Chemical Resistance PanelView™ Plus’.

**IMPORTANT** Do not operate the terminal in direct sunlight. Direct exposure to ultraviolet light can discolor the touch screen.
Clean the Display

A protective overlay can help extend the life of the terminal and make it easier to clean the display. Table 4 on page 17 provides catalog numbers for overlays.

**ATTENTION:** Do not use abrasive cleaners or solvents, they can damage the display. Do not scrub or use brushes.

Do not apply cleaning solution directly on the screen of the terminal. The solution can drip or seep onto the gasket. Apply cleaning solution to a clean sponge or soft cloth, and gently wipe the screen to remove the dirt and grime.

To clean the display, follow these steps.

1. Disconnect power from the terminal at the power source.
2. To clean the display and to prevent scratches, use a clean sponge or soft cloth with mild soap or detergent.
3. Dry the display with a chamois or moist cellulose sponge to avoid water spots.

Remove Paint and Grease

Follow these steps to remove paint or grease from the bezel that is properly mounted in a NEMA, UL Type, or IP rated enclosure.

1. Rub lightly with isopropyl alcohol (70% concentration).
2. To remove residue, use a mild soap or detergent solution.
3. Rinse with clean water.

Equipment Wash Downs

**ATTENTION:** Do not use a high-pressure washer for cleaning the front bezel of the terminal. A high-pressure washer can damage the terminal.

Do not use a high-pressure washer for cleaning vented enclosures. Water can enter the enclosure and damage the terminal and other equipment.

It is possible for screen objects to activate during equipment wash-downs if the terminal is turned on.
Ship the Terminal

If you ship the enclosure with the terminal installed, make sure that the terminal is properly secured and protected against damage from impact, sharp objects, or abrasive materials.

ATTENTION: Rockwell Automation is not responsible for damage to a product that is shipped or transported while installed in a panel or enclosure.

Maintenance Mode Operations

To start the system in Maintenance Mode for diagnostics and repairs, press and hold the white box that shows in the lower left corner of the display during startup.

TIP To access the Maintenance Mode menu, you can also attach a USB keyboard and hold down the F1 key.

If an ME application is set to run at terminal startup, press and hold the white box during startup to put the terminal into Safe Mode.

Table 38 - Maintenance Mode Operations

<table>
<thead>
<tr>
<th>Operation</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>None</td>
<td>Exits Maintenance mode and continues with a normal restart.</td>
</tr>
<tr>
<td>Safe mode</td>
<td>Starts the system in Safe Operating mode. Safe mode is a diagnostic mode with reduced functionality that lets you recover from a software anomaly. In Safe mode, you can repair corrupted applications or changes that caused the anomaly. Important: FactoryTalk View ME Station software does not run the HMI.mer application on startup if one is loaded, but instead enters Configuration mode. The HMI application runs the next time that the system is reset.</td>
</tr>
<tr>
<td>Clear all data</td>
<td>Restores all user-accessible storage and configuration data on the terminal to its default state. The current firmware revision is retained. Important: All storage media is returned to its original state when purchased except for the firmware. The latest FactoryTalk View ME image is retained. All user data changes or additions are lost.</td>
</tr>
<tr>
<td>Factory default</td>
<td>Restores all storage media on the terminal to its initial factory default state, including firmware, registry, file system, and configuration data. Typically, this option is used to recover from a failed firmware update. Important: All storage media is returned to its original state when purchased. All user-installed, firmware updates are removed. Refer to Restore a Back-up Image on page 88 for details on how to perform a restore.</td>
</tr>
</tbody>
</table>

Perform maintenance operation in this order to diagnose and repair problems:

- **Safe mode** – stops an application from starting automatically.
- **Clear all data** – removes user-installed applications, user-configuration changes, and user accessible data.
- **Factory default** – returns the terminal to its out-of-box state.
Notes:
Appendix A

Fonts Resident on Terminal

TrueType Fonts

The table lists TrueType fonts that are pre-installed on the terminals. The default system font is Tahoma.

**TIP** The Arial Unicode MS font contains almost 50,000 characters. The font provides default language support for many non-Latin languages and scripts including Arabic, Hebrew, Vietnamese, Thai, Hindi (Devanagari), and other Indic languages. The font also includes Chinese, Japanese, and Korean (CJK) support.

You can load more fonts on the system by copying the font files to the \Windows\Fonts folder on the terminal desktop. To access this folder, open the My Device icon on the terminal desktop or choose Start>Programs>Windows Explorer.

**IMPORTANT** OpenType fonts (.otf) can contain many extra symbols and characters and can have large file sizes. If you install OpenType fonts, it can result in a reduction in available memory for applications. We recommend that you install only TrueType fonts. If you need an OpenType font, install only the font family that you want to use.
