Important User Information

Solid-state equipment has operational characteristics differing from those of electromechanical equipment. Safety Guidelines for the Application, Installation and Maintenance of Solid-State Controls (Publication SGI-1.1 available from your local Rockwell Automation sales office or on-line at http://www.ab.com/manuals/gi) describes some important differences between solid-state equipment and hard-wired electromechanical devices. Because of this difference, and also because of the wide variety of uses for solid-state equipment, all persons responsible for applying this equipment must satisfy themselves that each intended application of this equipment is acceptable.

In no event will Rockwell Automation, Inc. be responsible or liable for indirect or consequential damages resulting from the use or application of this equipment.

The examples and diagrams in this manual are included solely for illustrative purposes. Because of the many variables and requirements associated with any particular installation, Rockwell Automation, Inc. cannot assume responsibility or liability for actual use based on the examples and diagrams.

No patent liability is assumed by Rockwell Automation, Inc. with respect to use of information, circuits, equipment, or software described in this manual.

Reproduction of the contents of this manual, in whole or in part, without written permission of Rockwell Automation, Inc. is prohibited.

Throughout this manual, when necessary we use notes to make you aware of safety considerations.

---

**WARNING**

Identifies information about practices or circumstances that can cause an explosion in a hazardous environment, which may lead to personal injury or death, property damage, or economic loss.

---

**IMPORTANT**

Identifies information that is critical for successful application and understanding of the product.

---

**ATTENTION**

Identifies information about practices or circumstances that can lead to personal injury or death, property damage, or economic loss. Attentions help you:

- identify a hazard
- avoid a hazard
- recognize the consequence

---

**SHOCK HAZARD**

Labels may be located on or inside the equipment (e.g., drive or motor) to alert people that dangerous voltage may be present.

---

**BURN HAZARD**

Labels may be located on or inside the equipment (e.g., drive or motor) to alert people that surfaces may be dangerous temperatures.

1 Safety Instructions

1.1 Designated Use
The Bulletin 836E is a pressure switch for measuring and monitoring absolute and gauge pressures. The device has been safely built with state-of-the-art technology and meets the applicable requirements and EC Directives. It can, however, be a source of danger if used incorrectly or for anything other than the designated use.

1.2 Installation, Commissioning, and Operation
Only personnel familiar with these types of products and associated machinery should plan or implement the installation, start-up, configuration, and subsequent maintenance of the Bulletin 836E pressure switch. Failure to comply may result in personal injury and/or equipment damage.

1.3 Operational Safety
  • Functional safety
    The Bulletin 836E pressure switches were developed according to the standards IEC 61508 and IEC 61511-1 (FDIS).
  • Hazardous areas
    The Bulletin 836E is not approved for use in intrinsic safety (hazardous area) applications.

1.4 Return
Before returning a device to Rockwell Automation, be sure to remove all fluid residue. This is particularly important if the fluid is a health hazard, e.g. flammable, toxic, caustic, carcinogenic, etc.

ATTENTION: Do not return a measuring device if you are not absolutely certain that all traces of hazardous substances have been removed, e.g. substances which have penetrated crevices or diffused through plastic.
## 2 Product Identification

![Image of nameplate]

**Fig. 1: Explanation of the nameplate - see table below**

<p>| | | | | |</p>
<table>
<thead>
<tr>
<th></th>

</tr>
</tbody>
</table>

**Notes:**

- Specifications and ratings may differ from those shown in Figure 1, depending on particular model. Refer to product nameplate or catalog for actual ratings and specifications.

- The series number indicates the version of the switch. A change in the series letter does not have any effect on the compatibility (see also Section 6 — Troubleshooting).

- The MWP (maximum working pressure) is specified on the nameplate. This value refers to a reference temperature of +20 °C (68 °F) and may be applied to the device for an unlimited time.

- The test pressure (Over Pressure Limit [OPL]) corresponds to 1.5 times the MWP and may be applied only for a limited time before causing damage to the switch.

<tr>
<td><strong>Process temperature</strong></td>
<td>-40…+100 °C (-40…+212 °F)</td>
</tr>
</tbody>
</table>

**Notes:**

① Male adapters cannot be used with the 0…1450 psi or the 0…6000 psi display models

② For conversion of psi to other units (bar, kPa, etc.), refer to inside back cover of this document
3.3 Installation Instructions

Fig. 3: Typical applications of the Bulletin 836E to measure pressure in gases, steam and liquids.

1. Bulletin 836E pressure switch
2. Shut-off assembly
3. U-pipe

For typical applications of the Bulletin 836E, see Figure 3 above:

- The image on the left illustrates how the 836E should be applied for pressure measurement in gases. The switch should be mounted with a shut-off assembly above the sampling nozzle so that any condensate can drain off into the process.

- The center image shows the correct installation for pressure measurement in steam. Note how the Bulletin 836E is mounted with a U-pipe below the sampling nozzle. Fill the U-pipe with fill fluid before commissioning.

- For pressure measurement in liquids, see the drawing on the right of Figure 3 above. The Bulletin 836E should be mounted below or at the same level as the sampling nozzle.

Additional considerations:

- Do not mount the device in the product flow or at a point where it could be affected by pressure pulses.

- Calibration and testing are easier if the device is mounted downstream of a shut-off assembly.

- The orientation of the Bulletin 836E can result in zero point shift, i.e. the measured value does not display zero in a non-pressurized state. This zero point shift can be corrected (see Section 4 – Operation).

- The digital display can be electronically rotated 180° (see Section 4 – Operation).

- The housing can be rotated up to 310° for optimal readability and ease of wiring.
3.4  Wiring

3.4.1  Display Version

The 836E is a DC voltage switch with two PNP outputs or a single PNP output with a 4…20 mA analog output. Both options feature an M12 (micro) connector.

![Diagram of Bulletin 836E with two PNP switch outputs or one PNP output with 4…20 mA analog output.](image)

Fig. 4: Bulletin 836E with two PNP switch outputs or one PNP output with 4…20 mA analog output.

3.4.2  Nondisplay Version

The nondisplay version is offered with 4…20 mA analog output.

![Diagram ofBulletin 836E with 4…20 mA analog output.](image)
3.5 Mating Cables

2m (6.5ft) PVC Cable with 4-pin micro (M12x1) connector and ratcheted epoxy-coated zinc coupling nut. Catalog number: 889D-F4AC-2

2m (6.5ft) PVC Cable with 4-pin micro (M12x1) right-angle connector and ratcheted epoxy-coated zinc coupling nut. Catalog number: 889D-R4AC-2

Note: Other cable lengths are available and shielded cables may be required for some analog output applications – refer to the On-Machine Connectivity catalog (publication #M115-CA001A-EN-P) for additional information.
4 Operation

4.1 On-Site Programming

The Bulletin 836E is programmed via three push buttons. The digital display and the light emitting diodes (LEDs) assist in the navigation through the operating menu.

Fig. 5: Location of operating keys and display elements
4.1.1 Navigating Through the Programming Menu

Refer to the menu structure in Figure 4.1.2 on the following page.

The section labeled A refers to Function groups
The section labeled B refers to the individual Functions within each Function group
The section labeled C identifies the possible values for each function

① To enter the operating menu:

- Press and hold the E key for longer than 3 sec.

② Once in programming mode (BASE will be displayed), toggle between the Function groups with the + and – keys

③ To enter the Function group, press the E key

④ To toggle between functions, repeatedly press the E key (Note that repeatedly pressing the E key will return you to the Function group.

- Then press the E key to return to the “Function” option

⑤ Once on the desired function, use the + or – key to change the function value

⑥ Press E to accept the function value

⑦ To save changes, press and hold the E key for longer than 3 sec.

- Once in SAVE, choose YES or NO with the + or – key
- Confirm with the E key (sensor will go through a start-up routine before entering operating mode)
- Warning code 210 (W210) will appear on the display to indicate a change in configuration (see Chapter 6, ‘Troubleshooting’ for further explanations of Error and Warning codes).

ATTENTION: Changes take effect only when you choose YES when asked to save the data.
### 4.1.2 Structure of the Programming Menu

The chart below illustrates the structure of the programming menu.

![Programming Menu Diagram]

**Fig. 6: Programming menu: A=function groups, B=functions, C=settings**
### 4.1.3 Basic Settings

<table>

<td><strong>DESINA</strong></td>
</tr>
</tbody>
</table>
4.1.4 Output Setting

- **Hysteresis mode**
  The hysteresis mode allows for two-point control. Depending on the pressure $p$, the hysteresis can be set via the set point $SP$ and the reset point $RSP$.

- **Window mode**
  The window mode enables process pressure range monitoring.

- **Analog output mode**
  The analog output mode returns a 4…20 mA signal proportional to the measured value. The upper and lower range values can be set by the user.

- **Factory default settings**
  Set point $SP$ 1: 45%; Reset point $RSP$ 1: 44.5%
  Set point $SP$ 2: 55%; Reset point $RSP$ 2: 54.5%
  Analog output: Lower Range Value (LRV) 0%; Upper Range Value (URV) 100%

- Each set point can be selected as Normally Open (N.O.) or Normally Closed (N.C.)

4.2 Programming with Personal Computer and ReadWin 2000

The 836E can also be configured via personal computer and ReadWin software. An additional configuration kit with a cable (Cat. No. 836E-NSR) is required to interface the USB port of the PC to the programming port of the pressure sensor, as shown below.

Fig. 8: Programming with PC

5 Accessories

5.1 Process Connection

- 836E

The process connection is an adapter and the sensor module has an adapter thread. As a result, the process connection can be easily changed at a later stage.

Fig. 10: Process connection

① Sensor module 836E
② Adapter with threaded connection
③ Adapter with clamp connection (sanitary)
5.1.1 Adapter Change

The adapter can be changed on 836E.

Fig. 11: Changing the adapter

1. Sensor module with adapter thread
2. Standard O-ring
3. Adapter

Please note the following when changing the adapter:

- Use a new O-ring. Diameter 15.54 x 2.62 mm (0.61 x 0.10 in.) with either EPDM 70 Shore FDA or FKM 70 Shore FDA material
- The sensor can be mounted with a 27 mm open-ended wrench.
- The adapter can be threaded on and tightened with a 28 or 32 mm (1.1 or 1.26 in.) open-ended wrench (depending on the process connection). The maximum torque is 80 N•m. The adapter can become loose if exposed to severe strain through pressure and temperature. For this reason, the adapter connection must be checked regularly and the tightened if necessary. We recommend using Teflon™ tape as an additional thread seal.
- When changing the adapter, take care to not damage the diaphragm of the pressure sensing element.
5.1.2 Adapter Versions

Catalog numbers for thread adapter versions (see diagram for dimensions):

**Process Adapters**
- G1/4 female: 836E-NP73
- G1/4 male: 836E-NP76
- 7/16 - 20UNF female: 836E-NP72
- 7/16 - 20UNF male: 836E-NP75
- 1/4-in. NPT female: 836E-NP71
- 1/4-in. NPT male: 836E-NP74

**Sanitary Adapters**
- 1 to 1-1/2-in. clamp: 836E-NH7B
- 2-in. clamp: 836E-NH7C
5.2  Welding Bosses

5.2.1  Welding Boss with Sealing Taper
Welding boss for flush mounting process connection with metallic sealing taper.

![Fig. 12: 836E-NWT](image)

5.2.2  Welding Boss with Sealing Surface
Welding boss for flush mounting process connection with sealing surface.
Material: AISI 316L
Seal (enclosed): silicone O-ring

![Fig. 13: 836E-NWS](image)
5.3 Configuration Kit with ReadWin

The configuration kit (Cat. No. 836E-NSR) consists of a software CD and a conversion cable which interfaces the USB port of the PC to the 4-pin programming port on the sensor face.

ReadWin® 2000 software is also available free of charge via download from www.ab.com/sensors/products/condsensingswitches
6 Troubleshooting

6.1 Error and Warning Codes

If an error occurs in the electronics, the color of the status LED changes from green to red and the display shows an error or warning code, as outlined below:

- E-code for errors
  In the event of an error message, the measured value is unreliable.

- W-code for warnings
  In the event of a warning, the measured value is still reliable.

### Error Codes

<table>

#### 6.2 Spare Parts

O-ring for adapter change

- O-ring 15.54 x 2.62 mm (0.61 x 0.10 in.), EPDM 70 Shore FDA, Catalog no. 836E-NV1
- O-ring 15.54 x 2.62 mm (0.61 x 0.10 in.), FKM 70 Shore FDA, Catalog no. 836E-NV2

#### 6.3 Repair

Bulletin 836E pressure switches are not repairable.

#### 6.4 Change Status

The release number on the nameplate and in the Operating Instructions indicates the change status of the device: XX.YY.ZZ (example 01.02.01).

- **XX**: Change in the main version. Compatibility no longer provided. Device and Operating Instructions change.
- **YY**: Change in functionality and operation. Compatibility provided. Operating Instructions change.
- **ZZ**: Troubleshooting and internal modifications. Operating Instructions do not change.
7 Technical Data

7.1 Display Version

7.1.1 Power Supply

Supply voltage
- DC voltage version
  12...30V DC

Current consumption
- Without load < 60 mA, with reverse polarity protection

Power supply failure
- Behavior in case of over voltage
  The device works continuously without any damage up to 34V DC.
  If the supply voltage is exceeded, the properties specified are no longer guaranteed.
- Behavior in case of under voltage
  If the supply voltage drops below the minimum value, the device switches off (status as if not supplied with power = switch open).

7.1.2 Output

Switching capacity
- Switch status ON: $I_a \leq 250$ mA
- Switch status OFF: $I_a \leq 1$ mA
- Switching cycles: > 10 000 000
- Voltage drop PNP: $\leq 2V$
- Overload protection
  Automatic load check of switching current; output is switched off in case of over current, the switching current is tested again every 0.4 sec.; max. capacitance load: 14 $\mu$F at max. supply voltage (without resistive load) max. period length: 0.5 sec.; min. $t_{on}$: 40 $\mu$s

Load (analog output)
- Max. $(V_{supply} - 6.5V)/0.022$ A

Input PLC
- Input resistance $R_i \leq 2$ k$\Omega$
  Input current $I_i \geq 10$ mA

Signal on alarm
- Analog output
  $\leq 3.6$ mA / last current value / $\geq 21.0$ mA adjustable
  (if setting $\geq 21.0$ mA the output is $\geq 21.5$ mA)
- Signal outputs
  In safe state (switch normally open)
7.1.3 Operating Conditions

Any orientation

Any position-dependent zero shift can be corrected

Position adjustment (offset): ±20% of the upper range limit

Operating conditions: Environment

- Ambient temperature range
  -40...+85 °C (briefly up to +100 °C [212 °F]), (–40...+185 °F)
- Storage temperature
  -40...+85 °C (–40...+185 °F)

Operating conditions: Process

- Medium temperature ranges
  -40...+100 °C (–40...+212 °F)

Limiting medium pressure range
- For overload resistance, see nameplate (Section 2)
- Vacuum resistance: 10 mbar abs

Material: AISI 316L

7.2 Nondisplay Version

7.2.1 Power Supply

Supply voltage

- DC voltage version
  12...30V DC

Current consumption

- 20 mA

7.2.2 Output

Output signal

- 4...20 mA

Maximum load

- Max. \( (V_{\text{supply}} - 12V)/0.02 \text{ A} \)

7.2.3 Operating Conditions

Ambient temperature range

- –25...+70 °C (–13...+158 °F)

Medium temperature range

- –25...+70 °C (–13...+158 °F)

Storage temperature range

- –40...+85 °C (–40...+185 °F)
